

STATEMENT OF WORK

1. Objective/Requirements

Heavy Gas Reclamation Equipment Parts; 8500 CFM Vacuum-Blower Seal Set Spares

2. Characteristics, Scope, and Specs

The vacuum blowers are part of the TDT HGRS that are vital for facility operations and test support. Two of the vacuum blower seals are scheduled for replacement over the next month, and given the lead time on procuring these items, the prudent measure of having spares on the shelf is what has resulted in this request. The facility has worked with the same vendor in providing these parts, since the age and unique nature of the equipment has resulted in lack of in-house expertise on the exactitude of parts required.

Please see attached quote for the specs

3. Place of Performance

National Aeronautics and Space Administration
Langley Research Center
Transonic Dynamics Tunnel B648 MS 340
218 Dodd Blvd
Hampton, VA 23681-2199

4. Period of Performance

10 Weeks ARO
