

### Questions/Answers

1. Is the stock dimension acceptable for thickness? **NO, the material needs to be the specified thickness, width and length**
2. What is the length and width tolerance? Our standard is -0.000 and +0.125 to +0.250. Which would you accept / prefer? **-0.000 to +.125**
3. The restriction forbidding plasma or weld cutting due to heat treat characteristics permits using a saw. Would water jet cutting also be acceptable? **Yes, waterjet would work**
4. Part 26901 did not state "Meet Standards: AMS-6359, ASTM-A829" as is on the other two. Does this requirement apply here also? **Yes, they should be all the same standard.**
5. Is the metal required to be DFARS compliant? **Yes.**
6. Are there any delivery requirements? (pallet weight limit, driver must unload, etc.) **Will be delivered to a base; therefore, arrangements must be made prior.**
7. Could material be cut with a water jet ? **Yes, waterjet would work** Also when does material need to be delivered ? **ASAP**
