SOLICITATION

NOTE: In sealed bid solicitations "offer" and "offeror" mean "bid" and "bidder".

10. THE GOVERNMENT REQUIRES PERFORMANCE OF THE WORK DESCRIBED IN THESE DOCUMENTS *(Title, identifying no., date):*

FY23 VA NRM Repair/Replace Elevators in B-41, Raymond G. Murphy VA Medical Center, Bernalillo County, NM.

This acquisition is an unrestricted (open to both large and small businesses) Lowest Price Technically Acceptable (LPTA) Procurement.

This requirement may be delayed, cancelled or revised at any time during the solicitation process of final award.

Magnitude of construction is between $5,000,000.00 and $10,000,000.00.

Proposals must be submitted in accordance with the requirements in Section 00 22 16. Proposals are due at the time specified in block 13. See Section 00 21 00 pertaining to ProjNet. As this is not a sealed bid, offers will not be opened publicly. Please allow sufficient time for turning in your proposal.

11. The Contractor shall begin performance within 10 calendar days and complete it within 570 calendar days after receiving ☐ award, ☒ notice to proceed. This performance period is ☒ mandatory, ☐ negotiable. *(See* 007000 *.)*

12 A. THE CONTRACTOR MUST FURNISH ANY REQUIRED PERFORMANCE AND PAYMENT BONDS? *(If "YES," indicate within how many calendar days after award in Item 12B.)* ☒ YES ☐ NO	12B. CALENDAR DAYS 10

13. ADDITIONAL SOLICITATION REQUIREMENTS:

A. Sealed offers in original and 1 copies to perform the work required are due at the place specified in Item 8 by 02:00 PM *(hour)* local time 18May2023 *(date)*. If this is a sealed bid solicitation, offers must be publicly opened at that time. Sealed envelopes containing offers shall be marked to show the offeror's name and address, the solicitation number, and the date and time offers are due.

B. An offer guarantee ☒ is, ☐ is not required.

C. All offers are subject to the (1) work requirements, and (2) other provisions and clauses incorporated in the solicitation in full text or by reference.

D. Offers providing less than 60 calendar days for Government acceptance after the date offers are due will not be considered and will be rejected.

PROPOSAL SCHEDULE
(To be attached to SF 1442)

Item No.	Description	Quantity	Unit	Unit Price	Amount
BASE BID					
0001	Repair Elevators in B-41, Complete	1	JOB	***	$_____
BID OPTION NO.1					
0002	New Cab Enclosures for S2 & S3, Complete	1	JOB	***	$_____

RECAPITULATION

TOTAL AMOUNT - BASE BID	$_____
TOTAL AMOUNT - BID OPTION NO.1	$_____
TOTAL AMOUNT - BASE BID & BID OPTION NO.1	$_____

NOTES:

1. Award of all proposal items will be made to one bidder. Award of Base Bid and Bid Options (if awarded) will be made to one bidder. Bidders must bid on all items.

2. EXERCISE OF OPTIONS. The Contracting Officer may exercise the option by written notice to the Contractor within the performance period listed for the base tasks. Completion of added options shall continue at the same schedule as the Base Bid unless otherwise noted in Section 00 70 00, CONDITIONS OF THE CONTRACT.

3. EVALUATION OF OPTIONS: (FAR 52.217-5) (JUL 1990) Except when it is determined in accordance with FAR 17.206(b) not to be in the Government's best interests, the Government will evaluate offers for award purposes by adding the total price for all options to the total price for the basic requirements. Evaluation of options will not obligate the Government to exercise the options(s).

(To be attached to SF 1442)

NOTES: (Cont'd)

4. ARITHMETIC DISCREPANCIES:

(a) For the purpose of initial evaluation of bids, the following will be utilized in the resolving arithmetic discrepancies found on the face of bidding schedule as submitted by the bidder:

(1) Obviously misplaced decimal points will be corrected.

(2) Discrepancy between unit price and extended price, the unit price will govern.

(3) Apparent errors in extension of unit prices will be corrected.

(4) Apparent errors in addition of lump-sum and extended prices will be corrected.

(b) For the purposes of bid evaluation, the government will proceed on the assumption that the bidder intends the bid to be evaluated on basis of the unit prices, the totals arrived at by resolution of arithmetic discrepancies as provided above and the bid will be so reflected on the abstract of bids.

(c) These correction procedures shall not be used to resolve any ambiguity concerning which bid is low.

5. If a modification to a bid based on unit prices is submitted, which provides for a lump sum adjustment to the total estimated cost, the application of the lump sum adjustment to each unit price in the bid schedule must be stated. If it is not stated, the bidder agrees that the lump sum adjustment shall be applied on a pro rata basis to every unit price in the bid schedule.

6. PROGRESS PAYMENT REQUESTS made by the Contractor pursuant to the provisions of Contract Clause, PAYMENTS UNDER FIXED-PRICE CONSTRUCTION CONTRACTS, shall be submitted on ENG FORM 93 to the administration office as designated in Block 26, Standard Form 1442 Back, Solicitation, Offer and Award. ENG FORM 93 shall be submitted to that office on the 1st of each month in appropriate form and certified. Photocopies of the form shall be furnished on that same date to the Corps of Engineers offices designated at the Pre-Construction Conference.

7. ACCRUALS. In accordance with USACE Engineer Financial Regulation (ER) 37-1-30, and other applicable Federal and DOD financial accounting standards, the Contractor must assist government personnel with providing reasonably accurate estimates of the value of goods and/or services rendered to the Government pursuant to this contract for each calendar month during which goods and services are delivered. Standard forms and instructions will be provided by the Government to assist with meeting this requirement. These monthly estimates, which facilitate timely entry of accruals, must be received by the Government on or before four (4) business days prior to each calendar month-end.

JV/CORP

CORPORATE, PARTNERSHIP, JOINT VENTURE CERTIFICATES

If the offer is submitted by a corporation, partnership or a Joint Venture, the applicable form listed below must be completed and submitted with the Standard Form 1442. In the alternative, other evidence must be submitted to substantiate the authority of the person signing the offer. If a corporation, the same officer shall not execute both the offer and the certificate.

CORPORATE CERTIFICATE

I, _____, certify that I am the Secretary of the corporation named as Offeror/Contractor herein; that _____ who signed this offer/contract on behalf of the Offeror/Contractor was then _____ of said corporation; that said offer/contract was duly signed for and on behalf of said corporation by authority of its governing body, and is within the scope of its corporate powers.

_____ (CORPORATE SEAL)
(Secretary)

AUTHORITY TO BIND PARTNERSHIP

This is to certify that the names and signatures of all partners are listed below and that the person signing the offer had authority to actually bind the partnership pursuant to its partnership agreement. Each of the partners individually has full authority to enter into and execute contractual instruments, on behalf of said partnership, with the United States of America, except as follows: (State "none" or describe limitations, if any.)

This authority shall remain in full force and effect until such time as the revocation of authority by any cause whatsoever has been furnished in writing to, and acknowledged by, the Contracting Officer.

INSTRUCTIONS TO OFFERORS

THE FOLLOWING ARE INSTRUCTIONS TO OFFERORS TO SECTION 00 20 00:

USE OF THE WORDS "PROPOSER" AND "OFFEROR"

Whenever the word "Proposer" appears in the RFP it shall be construed to have the same meaning as the word "Offeror."

REQUIREMENTS FOR PROTECTING FEDERAL CONTRACT INFORMATION (FCI) AND CONTROLLED UNCLASSIFED INFORMATION (CUI)

Perspective offerors are advised that per current DoD guidance, they are required to comply with FAR 52.204-21, DFARS 252.204-7012, and DFARS 252.204-7020 requirements for safeguarding FCI and CUI for ALL DoD contract awards. In order to be considered for award, contractors are required to complete a cybersecurity assessment in the Supplier Performance Risk System (SPRS), https://www.sprs.csd.disa.mil PRIOR to submitting a proposal. Offerors must be registered in the Procurement Integrated Enterprise Environment (PiEE) in order to access SPRS. Offerors can register for PIEE access at https://piee.eb.mil/piee-landing .

AVAILABILITY OF PLANS AND SPECIFICATIONS

This solicitation will be issued via Internet only. Notification of amendments shall be made via Internet only, as well. It is therefore the contractor's responsibility to check the following address daily for any posted changes to this solicitation. For security reasons, all technical and engineering data related to this solicitation will be distributed using SAM.gov, formerly Federal Business Opportunities (fbo.gov). SAM.gov is a consolidation of ten legacy sites into a single database. In order to save searches, follow contract opportunities, request secure documents or sign up for an Interested Vendor List, you will need a login.gov account in SAM.gov. To create a login.gov account or link an existing login.gov account with SAM.gov follow the instructions on the SAM.gov website. Contractors registered with SAM.gov may view and/or download this solicitation and all amendments from the Internet after solicitation issuance at this site.

BIDDER INQUIRY AND PROPOSAL INFORMATION

a. Technical inquiries and questions relating to proposal procedures or bonds are to be submitted via Bidder Inquiry in ProjNet at **www.projnet.org**.

1. To submit and review bid inquiry items, bidders will need to be a current registered user or self register into the system. To self-register, go to the aforementioned web page and click on the BID tab. Select Bidder Inquiry, select agency USACE, and enter the Bidder Inquiry Key for this solicitation listed below, your email address, and then click login. Fill in all required information and click create user. Verify that information on next screen is correct and click continue.
2. From this page, you may view all bidder inquiries or add inquiry.

2. Bidders will receive an acknowledgement of their question via email, followed by an answer to their question after it has been processed by our technical team.

3. The Solicitation Number is: **W912PP23R0005**
   The Bidder Inquiry Key is: **NYMYCE-JVWA35**

b. The Bidder Inquiry System will be unavailable for new inquires on 11 May 2023 at 2:00PM Mountain time, in order to ensure adequate time is allotted to form an appropriate response and amend the solicitation if necessary.

c. Offerors are requested to review the specification in its entirety, review the Bidder Inquiry System for answers to questions prior to submission of a new inquiry.
d. The call center operates weekdays from 8AM to 5PM U.S. Central Time Zone (Chicago). The telephone number for the Call Center is 800-428-HELP.
e. Offers will NOT be publicly opened. Information concerning the status of the evaluation and/or award will NOT be available after receipt of proposals.

CONTRACTING OFFICER AUTHORITY
The Contracting Officer who signs this contract will be the primary Contracting Officer for this contract. However, any Contracting Officer assigned to the Albuquerque District, contracting within his or her authority, may take formal action on this contract when a contract action needs to be taken and the primary Contracting Officer is unavailable.

NAICS CODE AND SMALL BUSINESS SIZE STANDARD
The North American Industry Classification System (NAICS) code for this acquisition is **238290**. The small business size standard is: the average annual receipts of the concern and its affiliates for the preceding three fiscal years must not exceed **$16.5 million**.
The small business size standard for a concern which submits an offer in its own name, other than on a construction or service contract, but which proposes to furnish a product which it did not itself manufacture, is 500 employees.

ESTIMATED CONSTRUCTION COST (FAR 36.204)
The estimated magnitude of construction for this project is between **$5,000,000.00 and $10,000,000.00**

WHO MAY SUBMIT PROPOSALS
Any legally organized Offeror may submit a proposal.

Firms submitting a proposal as a joint venture (JV) must ensure the following requirements are met:

a. Obtain a Tax Identification Number (TIN) for the joint venture.
b. Prepare the Section 004500, Representations and Certifications as a joint venture (e.g., providing the TIN for the JV)
c. Register in the System for Award Management (SAM) formerly Central Contractor Registration (CCR) as a joint venture in which a unique CAGE Code will be obtained. See FAR Clause 52.204-7, System for Award Management for further information in Section 002100.
d. Provide a copy of the JV agreement in the proposal submission.

SYSTEM FOR AWARD MANAGEMENT (SAM) REGISTRATION
The Offeror must ensure that your company's data at the System for Award Management (SAM) website, https://www.sam.gov/portal/public/SAM/, is current per FAR 52.204-13, System for Award Management Maintenance. (This clause is included in Section 007000 of this RFP.)

WHO WILL EVALUATE THE PROPOSALS
The Evaluation Committee will be composed of Corps of Engineers and White Sands Army personnel. A list of the members of the committee will not be released and contact with members of the committee is prohibited. Efforts to solicit support from the committee will be considered grounds for disqualification of an Offeror's proposal.

BONDS (FAR 28.102-2)

a. Bid Bond (Each Offeror shall submit with his offer a Bid Bond (Standard Form 24) with good and sufficient surety or sureties acceptable to the Government, or other security as provided in FAR

52.228-1. When the penal sum is expressed as a percentage, a maximum dollar limitation may be stated. The bid bond shall remain in effect until Performance and Payment Bonds are provided and accepted.

b. Performance and Payment Bonds. Within ten (10) calendar days after contract award, and prior to contract performance, the Contractor shall furnish two bonds, a Performance Bond (Standard Form 25) and a Payment Bond (Standard Form 25-A), each with good and sufficient surety or sureties acceptable to the Government. The penal sum of such bonds will be as indicated in FAR 52.228-15.

NEW MEXICO GROSS RECEIPTS TAX (NMGR)
The Offeror should be aware that NMGR tax is applicable to this contract and the rate may vary for each county and city. The Gross Receipts Tax Rate is available from the New Mexico Taxation and Revenue Department, (505) 841-6200. The Gross Receipts Tax Rate is available at http://www.tax.newmexico.gov.

FEDERAL, STATE AND LOCAL TAXES
The Offeror shall include all applicable federal, state and local taxes in the contract price. See FAR 52.229-3, Federal, State, and Local Taxes in Section 007000 for additional information.

PRE-AWARD INFORMATION
Each Offeror shall provide, upon request of the Contracting Officer, a list of present commitments, including the dollar value thereof, and name of office under which the work is being performed.

PERFORMANCE OF WORK BY CONTRACTOR (FAR 36.501)
Unless such description has been submitted with the offer, the successful Offeror must furnish the Contracting Officer within 20 days after award, a description of the work that he intends to perform with his own organization (e.g., earthwork, paving, brickwork, or roofing), the percentage of the total work this represents, and the estimated cost thereof.

U.S. ARMY CORPS OF ENGINEERS SAFETY AND HEALTH REQUIREMENTS MANUAL, EM 385-1-1 AND OSHA REQUIREMENTS

The successful contractor to this Request for Proposals will be required to comply with all pertinent provisions of the latest version of the U.S. Army Corps of Engineers Safety and Health Requirements Manual, EM 385-1-1, in effect on the date of the solicitation. EM 385-1-1 and its changes are available at **http://www.publications.usace.army.mil**. by selecting "Safety and Occupational Health" followed by "EM 385-1-1". The Contractor must also comply with Occupational Safety and Health Act (OSHA) standards. OSHA standards are subject to change. It is the Contractor's responsibility to maintain familiarity with current OSHA standards.

Zero Accident Goal: The Albuquerque District, in its continual pursuit of excellence in safety has established a goal of zero accidents. To attain this goal, it will be necessary for contractor management to set the expectation that worker injury is unacceptable and to create a culture where employees at all levels accept ownership of their safety performance.

AMENDMENTS TO REQUEST FOR PROPOSALS

The right is reserved, as the interest of the Government may require, to revise the specifications and drawings both before and after the date set for receipt of offers. Such revisions, if any, will be announced by amendment(s) to the Request for Proposal. If the revisions and amendments are of a nature which require material changes in quantities, or prices offered, or both, the date set for receipt of offers may be postponed by such number of days as in the opinion of the Contracting Officer will enable the Offeror to revise the offer. In such cases, the amendment will include an announcement of the new date for receipt of offer.

COSTS RELATED TO PROPOSAL PREPARATION

All costs related to proposal preparation, including travel, will be borne solely by the Offeror. The Government is not liable for any costs incurred by the Offeror submitting an offer in response to this solicitation.

CONTRACTOR PERFORMANCE EVALUATIONS

In accordance with the provisions of Subpart 36.201(Evaluation of Contractor Performance) of the Federal Acquisition Regulation (FAR), construction contractor's performance shall be evaluated throughout the performance of the contract. The United States Army Corps of Engineers (USACE) follows the procedures outlined in Engineering Regulation 415-1-17 to fulfill this FAR requirement. For construction contracts awarded at or above $750,000.00, the USACE will evaluate contractor's performance and prepare a performance report using the Construction Contractor Appraisal Support System (CCASS), which is a web-based system. After an evaluation (interim or final) is written up by the USACE, the contractor will have the ability to access, review and comment on the evaluation for a period of 30 days. Accessing and using CCASS requires specific software, called PKI certification, which is installed on the user's computer. The certification is a Department of Defense requirement and was implemented to provide security in electronic transactions. The certification software could cost approximately $110 - $125 per certificate per year and is purchased from an External Certificate Authorities (ECA) vendor. Current information about the PKI certification process and for contacting vendors can be found on the web site: **http://www.cpars.gov/**. If the Contractor wishes to participate in the performance evaluation process, access to PPIRS and PKI certification is the sole responsibility of the Contractor.

OFFEROR'S CHECKLIST

OFFEROR'S CHECKLIST

Administrative Notice to Offerors. Before signing and submitting this proposal, please take note of the following administrative details, as failure to properly perform any one of these actions may cause your proposal to be rejected:

[ ] Have you acknowledged receipt of ALL solicitation amendments? If in doubt as to the number of amendments issued, please contact MAJ David Terhune, Contract Specialist, at david.e.terhune@usace.army.mil.

[ ] Have you completed Section 00 45 00, Representations and Certifications?

[ ] Is your offer in sealed envelopes, price and technical, marked to show the Offeror's name and address, the solicitation number, and the date and time offers are due?

[ ] If any of the solicitation amendments involved changes to the proposal schedule, did you use the amended schedule for submitting your proposal?

[ ] Is your proposal guarantee in the proper form and amount?

[ ] Will your proposal arrive on time? In order for a late proposal to be considered, it must have been dispatched in accordance with the provisions of FAR 52.215-1, "Instructions to Offerors—Competitive Acquisition." **Facsimile proposals will not be accepted**.

[ ] Have you reviewed your proposal for possible errors in calculations or work left out?

CLAUSES INCORPORATED BY FULL TEXT

52.216-1 TYPE OF CONTRACT (APR 1984)

The Government contemplates award of a Firm, Fixed Price contract resulting from this solicitation.

(End of provision)

52.222-23 NOTICE OF REQUIREMENT FOR AFFIRMATIVE ACTION TO ENSURE EQUAL EMPLOYMENT OPPORTUNITY FOR CONSTRUCTION (FEB 1999)

(a) The offeror's attention is called to the Equal Opportunity clause and the Affirmative Action Compliance Requirements for Construction clause of this solicitation.

(b) The goals for minority and female participation, expressed in percentage terms for the Contractor's aggregate workforce in each trade on all construction work in the covered area, are as follows:

Goals for minority participation for each trade	Goals for female participation for each trade
38%	6.9%

These goals are applicable to all the Contractor's construction work performed in the covered area. If the Contractor performs construction work in a geographical area located outside of the covered area, the Contractor shall apply the

goals established for the geographical area where the work is actually performed. Goals are published periodically in the Federal Register in notice form, and these notices may be obtained from any Office of Federal Contract Compliance Programs office.

(c) The Contractor's compliance with Executive Order 11246, as amended, and the regulations in 41 CFR 60-4 shall be based on (1) its implementation of the Equal Opportunity clause, (2) specific affirmative action obligations required by the clause entitled "Affirmative Action Compliance Requirements for Construction," and (3) its efforts to meet the goals. The hours of minority and female employment and training must be substantially uniform throughout the length of the contract, and in each trade. The Contractor shall make a good faith effort to employ minorities and women evenly on each of its projects. The transfer of minority or female employees or trainees from Contractor to Contractor, or from project to project, for the sole purpose of meeting the Contractor's goals shall be a violation of the contract, Executive Order 11246, as amended, and the regulations in 41 CFR 60-4. Compliance with the goals will be measured against the total work hours performed.

(d) The Contractor shall provide written notification to the Deputy Assistant Secretary for Federal Contract Compliance, U.S. Department of Labor, within 10 working days following award of any construction subcontract in excess of $10,000 at any tier for construction work under the contract resulting from this solicitation. The notification shall list the --

(1) Name, address, and telephone number of the subcontractor;

(2) Employer's identification number of the subcontractor;

(3) Estimated dollar amount of the subcontract;

(4) Estimated starting and completion dates of the subcontract; and

(5) Geographical area in which the subcontract is to be performed.

(e) As used in this Notice, and in any contract resulting from this solicitation, the "covered area" is Bernalillo County, Albuquerque, NM.

(End of provision)

52.228-1 BID GUARANTEE (SEP 1996)

(a) Failure to furnish a bid guarantee in the proper form and amount, by the time set for opening of bids, may be cause for rejection of the bid.

(b) The bidder shall furnish a bid guarantee in the form of a firm commitment, e.g., bid bond supported by good and sufficient surety or sureties acceptable to the Government, postal money order, certified check, cashier's check, irrevocable letter of credit, or, under Treasury Department regulations, certain bonds or notes of the United States. The Contracting Officer will return bid guarantees, other than bid bonds, (1) to unsuccessful bidders as soon as practicable after the opening of bids, and (2) to the successful bidder upon execution of contractual documents and bonds (including any necessary coinsurance or reinsurance agreements), as required by the bid as accepted.-

(c) The amount of the bid guarantee shall be 20 percent of the bid price or $3 Million, whichever is less.-

(d) If the successful bidder, upon acceptance of its bid by the Government within the period specified for acceptance, fails to execute all contractual documents or furnish executed bond(s) within 10 days after receipt of the forms by the bidder, the Contracting Officer may terminate the contract for default.-

(e) In the event the contract is terminated for default, the bidder is liable for any cost of acquiring the work that

exceeds the amount of its bid, and the bid guarantee is available to offset the difference.

(End of provision)

52.228-17 INDIVIDUAL SURETY--PLEDGE OF ASSETS (BID GUARANTEE) (FEB 2021)

(a) Offerors shall obtain from each person acting as an individual surety on a bid guarantee--

(1) A pledge of assets that meets the eligibility, valuation, and security requirements described in the Federal Acquisition Regulation (FAR) 28.203-1; and

(2) Standard Form 28, Affidavit of Individual Surety.

(b) The Offeror shall include with its offer the information required at paragraph (a) of this provision within the timeframe specified in the provision at FAR 52.228-1, Bid Guarantee, or as otherwise established by the Contracting Officer.

(c) The Contracting Officer may release the security interest on the individual surety's assets in support of a bid guarantee based upon evidence that the offer supported by the individual surety will not result in contract award.

(End of provision)

52.233-2 SERVICE OF PROTEST (SEP 2006)

(a) Protests, as defined in section 33.101 of the Federal Acquisition Regulation, that are filed directly with an agency, and copies of any protests that are filed with the Government Accountability Office (GAO), shall be served on the Contracting Officer (addressed as follows) by obtaining written and dated acknowledgment of receipt from

U.S. ARMY CORPS OF ENGINEERS
ATTN: CONTRACTING DIVISION (Contracting Officer, Francesca M. Luna)
4101 JEFFERSON PLAZA NE
ALBUQUERQUE, NM 87109-3435

(b.) The copy of any protest shall be received in the office designated above within one day of filing a protest with the GAO.

(End of provision)

52.236-27 SITE VISIT (CONSTRUCTION) (FEB 1995) – ALTERNATE I (FEB 1995)

(a) The clauses at 52.236-2, Differing Site Conditions, and 52.236-3, Site Investigations and Conditions Affecting the Work, will be included in any contract awarded as a result of this solicitation. Accordingly, offerors or quoters are urged and expected to inspect the site where the work will be performed.

(b) An organized site visit has been scheduled for--
Date: May 4, 2023
Time: 9:00am - 11:00am (MST)

(c) Offerors and subcontractors shall register for the site visit AT LEAST THREE (3) BUSINESS DAYS BEFORE the date of the site visit.

(d) Personnel are required to wear masks during site visits if a distance of six (6) feet cannot be maintained between individuals. Contractors must provide their own masks.

(e) Offerors and subcontractors wishing to participate will provide the following information to the Site Visit Registration POCs listed below:
--Visitor Name
--Company Name
--Driver's License number

(f) Site Visit Registration POCs:

POC #1: Jacob Chavez	POC#2: Erin Larivee
Email: jacob.chavez@usace.army.mil	Email: Erin.M.Larivee@usace.army.mil
Phone: (505) 346-7227	Phone: (505) 346-7227 X 7229
Mobile: N/A	Mobile: (505) 231-0052

(g) Participants will meet at Building 56, in the southeast corner of the main campus area of Raymond G. Murphy Dept. of Veterans Affairs Medical Center. Participants will proceed to the Building 41 project site together after signing in and receiving a site visit briefing from the Government representatives at Building 56.

(End of provision)

52.252-1 SOLICITATION PROVISIONS INCORPORATED BY REFERENCE (FEB 1998)

This solicitation incorporates one or more solicitation provisions by reference, with the same force and effect as if they were given in full text. Upon request, the Contracting Officer will make their full text available. The offeror is cautioned that the listed provisions may include blocks that must be completed by the offeror and submitted with its quotation or offer. In lieu of submitting the full text of those provisions, the offeror may identify the provision by paragraph identifier and provide the appropriate information with its quotation or offer. Also, the full text of a solicitation provision may be accessed electronically at this/these address(es):

https://www.acquisition.gov/browse/index/far

(End of provision)

52.252-5 AUTHORIZED DEVIATIONS IN PROVISIONS (NOV 2020)

(a) The use in this solicitation of any Federal Acquisition Regulation (48 CFR Chapter 1) provision with an authorized deviation is indicated by the addition of "(DEVIATION)" after the date of the provision.

(b) The use in this solicitation of any Defense Federal Acquisition Regulation (48 CFR Chapter 2) provision with an authorized deviation is indicated by the addition of "(DEVIATION)" after the name of the regulation.

(End of provision)

SECTION 00 22 16

SECTION II
(Section 00 22 16 of the RFP)

PROPOSAL SUBMISSION REQUIREMENT, EVALUTATION CRITERIA, AND BASIS FOR AWARD FOR DESIGN BID BUILD FY23 VA NRM Repair/Replace Elevators in B-41, Raymond G. Murphy VA Medical Center, BERNALILLO COUNTY, NEW MEXICO.

A. PROPOSAL SUBMISSION

1. GENERAL REQUIREMENTS

1.1 The intent of this Request for Proposal (RFP) is to solicit proposals for FY23 VA NRM Repair/Replace Elevators in B-41, Raymond G. Murphy VA Medical Center, BERNALILLO COUNTY, NEW MEXICO. The Government reserves the right to award a contract without discussions in accordance with (IAW) FAR 52.215-1, therefore, the offeror's initial proposal should contain the offeror's best terms from a Management/technical and cost/price standpoint. Offerors shall organize their proposals as described herein. Proposals may be determined non-responsive for failure to follow this format.

1.2 The proposal shall describe the capability of the offeror to perform the requirements of the solicitation. The proposal should be specific and complete in every detail, and should be prepared simply and economically, providing a straightforward and concise description of capabilities to satisfactorily perform the requirements. The proposal should be practical, legible, clear, and coherent.

1.3 In order to evaluate all proposals effectively and equitably, the Contracting Officer must receive information containing sufficient detail to allow review and evaluation by the Government. Proposal clarity, organization, and cross-referencing are mandatory. Failure to submit and organize proposals as requested may adversely affect an offeror's evaluation.

2. PROPOSAL SUBMISSION REQUIREMENTS

2.1 Each volume shall be submitted electronically. There are two electronic options: via email or using the DoD SAFE (formerly AMRDEC SAFE) if proposals are too large to send via email. When using SAFE, offerors are required to request a drop off code from the Contract Specialist, MAJ David Terhune, david.e.terhune@usace.army.mil prior to the proposal due date and time. It is recommended that offerors contact the Contract Specialist, prior to the receipt of proposal date and time, to verify that their

proposal has been successfully submitted, as the DoD SAFE website does not generate a confirmation email.

2.2 Each paragraph shall be single spaced and be separated by at least one blank line. A standard, 12-point minimum font size applies. Arial or New Times Roman fonts are required. Tables and illustrations may use a reduced font size no less than 10-point and may be produced in landscape mode. Sheet size shall be 8.5 x 11 inches, however if drawings, charts, or other graphics are submitted, sheets no larger than 11 x 17 inches shall be used. **Each 11 x 17 page shall count as one (1) single page toward the page count.**

2.3 The following volumes of material shall be submitted:

Volume/Title	Electronic Copies	Page limit
Volume 1: Technical Proposal	One (1)	30*
Volume 2: Price Proposal	One (1)	N/A

Volume	Tab	Title	Digital Copies	Maximum Pages	Rating
1	A	Factor 1: Relevant Contractor Experience	1	20	Acceptable/Unacceptable
1	B	Factor 2: Management Approach	1	10	Acceptable/Unacceptable
1	C	Factor 3: Past Performance	1	N/A	Acceptable/Unacceptable
2		Factor 4: Cost/Price	1	N/A	Not Rated
2	A	Solicitation, Offer and Award Documents, and	1	N/A	Not Rated

		Certifications / Representations			
2	B	Proposal Schedule	1	N/A	Not Rated
2	C	Bid Guarantee (Bid Bond)	1	N/A	Not Rated
2	D	Financials and Financial Standing Questionnaire	1	N/A	Not Rated
2	E	Small Business Subcontracting Plan	1	N/A	Acceptable/Unacceptable
2	F	JV Agreement or Teaming Agreement (if applicable) and/or Corporate, Partnership, Joint Venture Certificate	1	N/A	Not Rated

2.3.1 Past Performance Questionnaires, Representations and Certifications, performance recognition documents, and Small Business Participation Past Performance, are excluded from the page count. Title sheets, indices, a detailed work schedule, and tables of contents are EXCLUDED from the page limitations specified in the tables above.

2.3.2 ***NOTE: Pages that exceed the required page limitations will not be evaluated. Additional pages over the maximum allowed will be removed or not read and will not be evaluated by the Government.***

2.3.3 ***NOTE: A RATING OF UNACCEPTABLE ON ANY FACTOR WILL RESULT IN AN OVERALL RATING OF UNACCEPTABLE.***

3. PROPOSAL FILES

3.1 Format. The submission shall be clearly indexed and logically assembled. Each volume shall be clearly identified and shall begin at the top of a page. All pages of each volume shall be appropriately numbered and identified by the complete company name, date, and Request for Proposal (RFP) number in the header and/or footer. A Table of

Contents should be created using the Table of Content feature in MS Word. MS Word (doc) files shall use the following page setup parameters:

Margins – Top, Bottom, Left, Right – 1”
Gutter – 0”
From Edge – Header, Footer 0.5”
Page Size, Width – 8.5”
Page Size, Height – 11”

3.2 The following additional restrictions apply:

3.2.1 File Packaging. Files shall be in read-only, searchable format, using PDF files.

3.2.2 Content Requirement. All information shall be confined to the appropriate file. The offeror shall confine submissions to essential matters sufficient to define the proposal in a concise manner to permit a complete and accurate evaluation of each proposal. Proprietary information shall be clearly marked.

3.2.3 Where the word “project” appears, it is understood to mean a project(s), contract(s), task order(s), or any other contract document provided for in the Federal Acquisition Regulation (FAR 2.101). Examples of projects submitted by the Prime Contractor may be projects performed for a State or Federal Government Agency, or for a commercial or private sector customer.

B. FACTORS AND EVALUATION APPROACH

VOLUME 1, Tabs A-C Technical Proposal. The volume shall be organized in accordance with the PROPOSAL SUBMISSION REQUIREMENTS and include the following:

1. Factor 1: Relevant Contractor Experience

1.1 SUBMISSION REQUIREMENTS

1.1.1 The offeror shall submit examples of recent construction projects which best illustrate the experience of the construction contractor on relevant projects of similar scope, type, complexity, and magnitude as defined below. **A minimum of three (3) projects, but not more than five (5), are to be submitted for the offeror as the Prime Contractor.** Limit the information for Factor 1 to **twenty (20) pages** or less. If the offeror’s submission exceeds the project limitation of 5 (five) projects, only the first (5) projects submitted will be evaluated, and any remaining additional project(s) will not be evaluated.

1.1.2 Where the word “recent” appears, it is understood to mean construction type project for which construction is at least 70% complete (measured by performance period days) as of the RFP closing date, or a construction type project that has been

completed within 7 years of the RFP closing date. Projects completed more than 7 years before the RFP closing date **will not be considered** for evaluation purposes.

1.1.3 Where the word “relevant” appears, it is understood to mean that project experience submitted is similar to the context of the solicitation in terms of scope, type, magnitude of effort and complexity as described and required in this RFP. For this RFP, “relevant” projects are defined as projects that are similar in terms of:

(a) Renovation or modernization of existing elevator cabs, hoist-ways, machinery spaces, doors, controls, ventilation, life-safety analysis and fire-rated assemblies
(b) Experience with elevator construction in an occupied hospital environment.
(c) Projects involving construction, renovation, or modernization of elevators with a total value at least $3,500,000.
(d) Experience with comprehensive phasing of work in an occupied hospital environment.
(e) Experience with reusable Infection Control Risk Assessment (ICRA) barriers and ICRA Best Practices in Health Care Construction.

Offeror must demonstrate relevant project experience for each of the items (a) through (e) above. Relevant experience can be demonstrated through a combination of the maximum of five (5), minimum of three (3), projects.
All projects submitted for Relevant Contractor Experience must have a project total value of at least $3,500,000.

1.1.4 Information is to be compiled on the Contract Description Forms provided at the end of Section 00 22 16 and will be used to evaluate relevant contractor experience. Responses to this factor should take into account experience of the management team proposed for the contract, timeliness of performance, safety and health record, customer satisfaction and cost control. Projects submitted shall include challenges that were overcome and risks that were mitigated by use of quality management, risk evaluation and mitigation, and technical solutions.

1.1.5 Offerors are invited, but not required, to submit photographs of successful projects in conjunction with this section.

1.1.6 Each project example narrative must include the following information (provided on Contract Description Form):

1.1.6.1 Project and title location

1.1.6.2 Detailed scope of the project

1.1.6.3 Original contract award amount and final construction cost

1.1.6.4 Original contract finish date and actual finish date

1.1.6.5 Points of contact, as described below

1.1.6.6 Subcontractors utilized on the project and if they are proposed to be utilized for this project

1.1.6.7 Prime Contractor personnel on the project and if they are proposed to be utilized for this project

1.1.6.8 Narrative description of the project, as described below:

1.1.7 All project examples shall contain a Point of Contact (POC) as well as on alternate POC, to include the name, job title of the POC, address, telephone, and e-mail address. The POC and alternate shall be familiar with the construction performance of the proposer and be a representative of the owner/customer, not affiliated with the proposer. The POC and alternate shall be available to verify the experience cited.

1.1.8 Narratives for each project should include a brief overview of the project and providing specifics as noted herein, discussing major features of the project and each project's relevance and similarities to this project. The role and work assigned to any sub-contractors and/or personnel noted in the narrative shall be explained.

1.1.9 Indefinite-Delivery, Indefinite-Quantity (IDIQ) Contracts, where numerous Task Orders are summed to meet the minimum construction dollar value identified herein, are not acceptable.

1.1.10 If proposing as a Joint Venture (JV), providing examples for each prime contractor in the JV within the maximum of five (5) project examples is allowed. JV documentation shall be provided in Volume 2 of the offeror's price proposal.

1.1.11 In the case of contractor teaming arrangements involving a prime contractor and subcontractor(s), where the prime contractor submits the proposal in response to this RFP, the prime contractor must have completed at least 2 of the 3 minimum total number of relevant projects submitted for Factor 1 for consideration in response to the experience requirements of the RFP. Teaming documentation shall be provided in Volume 2 of the offeror's price proposal. If a teaming agreement or commitment is not provided, the projects of any team members outside of the Prime Contractor will not be considered.

1.2 EVALUATION CRITERIA

1.2.1 The Government will evaluate the extent of the offeror's experience on projects that are "recent" and "relevant" to the work to be done in the context of this solicitation. Recency and relevancy are defined above. The evaluation will focus on the offeror's experience in construction of facilities similar to this project. **The offeror must submit at least three projects that are determined to be recent and relevant to this project**

as defined in Sections 1.1.2 and 1.1.3 above in order to receive an Acceptable rating for this factor.

1.2.2 The Government preference is that project examples submitted be of completed projects (i.e., construction complete). Projects still under construction will be evaluated only if they are at least 70% complete as of the RFP closing date.

1.2.3 The Offeror MUST, at a minimum, address the requirements listed above. Failure to address these requirements will result in an Unacceptable rating. The Government will evaluate the offeror's understanding of the requirements described in the RFP and associated documents and the capability to execute the project.

2. Factor 2: Management Approach

2.1 SUBMISSION REQUIREMENTS

2.1.1 Provide information that describes the offeror's organization and intended management approach to project management and execution. Limit the information to **ten (10) pages.** At a minimum, the narrative MUST address the key points listed below.

2.1.1.1 Discuss your management approach to successfully complete this construction project. 1) Identify and explain the roles and responsibilities of team members that will perform major or critical aspects of construction phases including lines of authority in decision making. Provide an organization chart identifying on-site and remote positions and staff. 2) Discuss the roles and responsibilities of proposed subcontractors for this project. Identify any experience with local sub-contractors and your approach to managing local workforce.

2.1.1.2 Describe your approach to providing and maintaining an effective Quality Control program for this project to meet contract requirements for onsite construction activities and offsite fabrication. Provide a summary of the Quality Control organization, roles and responsibilities of key positions, and a summary level plan to meet the project's Quality Control requirements. Offerors are cautioned that reciting of the Technical requirements with a statement of intent to perform does not reflect an understanding of the requirement or capability to perform. Offerors are responsible for including sufficient details to permit complete and accurate evaluation of each proposal.

2.1.1.3 Describe your approach to phasing of work to execute the project in an occupied VA Medical Center.

2.1.1.4 Describe manufacturing, technical support, and production facilities available to support the execution of this project.

2.2 EVALUATION CRITERIA

2.2.1 The Offeror MUST, at a minimum, address the requirements listed above. Failure to address all requirements will result in an Unacceptable rating. The Government will evaluate the offeror's understanding of the requirements described in the Division 01 of the RFP in addition to any/all plans and specifications of the RFP and the capability to execute the project.

3. **Factor 3 – Past Performance**

3.1 SUBMISSION REQUIREMENTS

3.1.1 Information provided on the Contract Description Forms provided under Factor 1: Relevant Contractor Experience will be used to evaluate Past Performance.

3.1.2 Past Performance Questionnaire (PPQ).

3.1.2.1 For each of the projects submitted in response to Section 1.1, provide a Contractor Performance Assessment Reporting System (CPARS) evaluation, or a completed Past Performance Questionnaire (PPQ), completed by a representative of the owner that provides the owner's opinion of the offeror's past performance for the project. As an alternative to a CPARS evaluation, or when CPARS evaluations do not apply, the Past Performance Questionnaire included in this solicitation (at the end of Section 00 22 16) is provided for the offeror or its team members to submit to the customer/client for each project the offeror includes in its proposal for the Past Performance factor. The offeror shall complete Part I of the Past Performance Questionnaire and e-mail the questionnaire to both the contracting activity and technical representative (Government or otherwise) responsible for the past/current contract. The POCs shall be instructed to electronically complete Part II of the questionnaire. Ensure correct phone numbers and email addresses are provided for the customer/client point of contact.

3.1.2.2 Completed PPQs should be submitted with your proposal. If the offeror is unable to obtain a completed PPQ from a customer/client for a project before the proposal closing date, the offeror should complete and submit with the proposal the first page of the PPQ which will provide contract and customer information for the respective project(s). Offerors should follow up with customers/clients to ensure timely submittal of questionnaires. The Government reserves the right to contact the customer/client for verification or additional information. If the customer requests, questionnaires may be submitted directly to the Contracting Office no later than the proposal due date via email. Contact, MAJ David Terhune, Contract Specialist, via email at David.e.terhune@usace.army.mil.

3.1.2.3 Offerors shall not incorporate by reference into their proposal PPQs previously submitted for other RFPs. i.e., offerors cannot reference PPQ's from other projects by simply stating "refer to PPQ submitted for Project XX". Complete PPQs must

be submitted for this project. However, this does not preclude the Government from utilizing previously submitted PPQ information into the past performance evaluation.

3.1.2.4 Submit copies of Federal/DoD/Navy/Army performance reviews even if they may be in the agency's databases or likely within the agency's arm's reach, i.e., Contractor's copy of CPARS evaluations for each of the projects submitted, to ensure the agency has all relevant past performance information.

3.1.2.5 Provide the Unique Entity Identification number(s) and CAGE code(s) for the prime contractor and all teaming partners, e.g., design firms, key subcontractors, and joint venture partners, whose experience is included in this Factor.

3.1.2.6 The Government may contact and interview the owner's representative identified on the Past Performance Questionnaires and reserves the right to interview other individuals acting for the owner's representative if the owner's representative is not available. In addition, the Government may review any other sources of information for evaluating past performance.

3.1.2.7 Offerors may include performance recognition documents received within the last seven (7) years, from RFP closing date, such as awards, award fee determinations, customer letters of commendation, and any other forms of performance recognition relative to the projects submitted for this factor. The Government may review other sources, including, but not limited to, past performance information retrieved through the Past Performance Information Retrieval System (PPIRS), including Contractor Performance Assessment Reporting System (CPARS), using all CAGE/DUNS numbers of team members (partnership, joint venture, teaming arrangement, or parent company/subsidiary/affiliate) identified in the offeror’s proposal, inquiries of owner representative(s), Federal Awardee Performance and Integrity Information System (FAPIIS), Electronic Subcontract Reporting System (eSRS), and any other known sources not provided by the offeror.

3.1.2.8 While the Government **may** elect to consider data from other sources, the burden of providing detailed, current, accurate and complete past performance information rests with the offeror.

3.1.2.9 Other types of past performance questionnaires, signed by a commercial customer or signed by a representative from another Federal or State agency, may be submitted as long as the information submitted has the same or similar information as that of the PPQ provided at the end of this section, documenting the quality of the offeror’s performance for the project submitted.

3.1.2.10 PPQs previously completed by the customer/client may be submitted in lieu of having the customer/client complete a new questionnaire for the contracts identified in the Contract Descriptions Form. Previously completed surveys will be evaluated only if: (1) they match the projects identified in Volume I Tab A **and** (2) they are submitted according to the instructions listed above.

3.1.2.11 Small Business Participation Past Performance. All offerors shall submit information substantiating the offerors' past performance in complying with FAR 52.219-8, Utilization of Small Business Concerns, maximizing opportunities for U.S. small business subcontractors. Offerors may submit ISRs/SSRs as part of their past performance. Offerors shall also provide a statement indicating whether any negative information has been reported in the past seven years concerning the offerors' past compliance with FAR 52.219-8 and FAR 52.219-9 (large businesses only). If any such negative information has been reported, the offeror may submit explanations or comments responding to such negative information. Offerors with no prior contracts containing FAR 52.219-8 and 52.219-9 (large businesses only) shall certify the same. In evaluating past performance, the Government reserves the right to review any ISRs/SSRs in the eSRS, not provided in the offeror's proposal.

3.1.2.12 If an offeror has been required to take corrective action for any substandard performance (overall rating below Satisfactory), the offeror should explain the circumstances and the corrective actions taken. If an offeror has experienced other performance problems such as cost overruns, extended performance periods, numerous warranty calls, etc., the offeror should provide an explanation of the reason(s) for the shortcomings and any corrective action(s) taken to avoid recurrence.

3.1.2.13 At no time during this process, during any debriefing, or after any award, will the names of the individuals providing reference information about an offeror's past performance be revealed to the offerors or to any other party. If discussions are held, Offerors may be afforded the opportunity to respond to adverse comments made by references in accordance with guidelines identified in FAR Part 15.3. In this case, relevant comments will be extracted and provided to the offeror.

3.2 EVALUATION CRITERIA

3.2.1 The Offeror shall submit either a CPARS evaluation or PPQ for each of the projects submitted for Factor 1: Experience. The Government will evaluate the Offeror's record of past and current performance to ascertain the probability of successfully performing the required efforts of the contract. Information provided on the Contract Description Forms provided under Factor 1: Relevant Contractor Experience will be used to evaluate Past Performance.

3.2.2 The Government will focus its inquiries on the record of performance as it relates to all solicitation requirements, including cost, schedule, performance and management of subcontractors *and compliance with FAR 52.219-8, Utilization of Small Business Concerns, and FAR 52.219-9, Small Business Subcontracting Plan.* A significant achievement, problem, or lack of relevant data in any element of the work can become an important consideration in the evaluation process. Absent any recent and relevant past performance history, the offeror shall be determined to have unknown (or "neutral") past performance. In the context of acceptability/unacceptability, a neutral rating shall be considered Acceptable. In making its assessment, the Government may use data provided by the offeror in its proposal and data obtained from other sources, including data in Government files or data obtained through interviews with personnel familiar with the contractor, and any other information relating to their current and past performance under Federal, State or Local government or commercial contracts.

3.2.3 The past performance factor is an assessment of the offeror's probability of successfully performing this contract. This assessment considers each offeror's demonstrated recent and relevant record of performance in supplying products and services that meet the contract requirements. The contractor must have an overall Past Performance rating of no less than "Satisfactory" on a majority of the projects submitted for this factor. Negative Past Performance may be considered by the Government as an indicator of increased risk of unsuccessful performance on this contract. As such, the Contracting Officer may determine that an Unacceptable rating for Past Performance is merited for offerors who demonstrate a trend of negative Past Performance.

3.2.3.1 Past performance is initially evaluated to determine whether the offeror's present/past performance is recent, and relevant or not relevant to the effort to be acquired.

3.2.3.2 RECENCY: The first aspect is to evaluate the recency of the offeror's past performance. Recency is generally expressed as a time period during which past performance references are considered relevant and is critical to establishing the relevancy of past performance information. (Seven (7) years as of the RFP closing date.)

3.2.3.3 RELEVANCY: The second aspect is to determine how relevant a recent effort accomplished by the offeror is to the effort to be acquired through the source selection. Relevancy is not separately rated; however, the following criteria (see Table 1) will be used to establish what is relevant which shall include items such as similarity of service/support, complexity, dollar value, contract type, and degree of subcontract/teaming.

Table 1- Past Performance Relevancy Ratings	
Rating	**Definition**

Relevant	Present/past performance effort involved similar scope and magnitude of effort and complexities as this solicitation requires.
Not Relevant	Present/past performance effort involved little or none of the scope and magnitude of effort and complexities as this solicitation requires.

3.2.4 Past Performance Evaluation Rating: Past performance information collected will be reviewed to determine how well the offeror performed on prior contracts. Utilizing the Performance Evaluation Ratings (see Table 3 below) the most appropriate rating for each Offeror will be assigned based on the Offeror's demonstrated recent and relevant record of performance.

4. VOLUME 2, Tabs A-F – Cost/Price.

4.1 The volume shall be organized in accordance with the PROPOSAL SUBMISSION REQUIREMENTS and include the following:

4.1.1 Electronic Copy. The Offeror shall provide a completed Proposal Schedule from Section 00 10 00 of the RFP.

4.1.2 Compliance. Failure to comply with the RFP requirements for Cost information may result in an adverse assessment of an offeror's proposal and reduce or eliminate its chance of being selected for award. Offerors shall ensure that the information presented in this volume is consistent and correlates with the information contained in the other proposal volumes. Also, the Offeror shall ensure that the information submitted in this volume is consistent with and fully supports the amounts set forth in the SF1442 and continuation sheets.

4.1.3 General Instructions. In accordance with Federal Acquisition Regulation (FAR) 15.402 and 15.403-1, certified cost or pricing data are not required based on the fact that adequate competition is expected for this procurement. Information other than certified cost or pricing data may be provided in contractor format providing that sufficient information is made available. Information submitted shall be prepared following the instruction in FAR 15.403-5. If after receipt of proposals the Contracting Officer determines that there is insufficient information available to determine price reasonableness and none of the exceptions at FAR 15.403-1 apply, the Offeror may be required to submit cost or pricing data. Additionally, in the event that adequate competition is not obtained, the Contracting Officer may incorporate FAR 52.215-20 entitled, "Requirements for Cost or Pricing Data or Information Other Than Cost or Pricing Data," into the solicitation and request a Certificate of Current Cost or Pricing Data. There are no page limitations for this volume. Proposal information included in this volume which is not directly related to Cost will be disregarded.

4.1.4 Proposal Cover Sheet. Offerors shall include a proposal cover sheet in Volume 2 as required by FAR 52.215-1(c)(2). This provision, entitled “Instructions to Offerors – Competitive Acquisition,” is included in full text in Section 00 21 00 of the RFP. The proposal cover sheet must provide the following information:

4.1.4.1 Solicitation Number

4.1.4.2 Name, address, telephone, and electronic email address

4.1.4.3 Unique Entity Identification number, CAGE, and Tax Identification numbers of the Offeror

4.1.4.4 Statement specifying the extent of the agreement with all terms, conditions, and provisions included in the solicitation and agreement to furnish any or all items upon which prices are offered at the price set opposite each item as reflected in the price schedule attached to the SF1442. (Note: failure to agree with all terms, conditions, and provisions in the solicitation may result in the Offeror’s proposal being rejected as non-responsive).

4.1.4.5 Name, title, telephone, and electronic email address of person(s) authorized to negotiate on the Offeror’s behalf with the Government in connection with this RFP.

4.1.4.6 Name, title, telephone, and electronic email address of person(s) authorized to sign the proposal and any contract that may result from the proposal.

4.1.4.7 Name, title, telephone, and electronic email address of alternative point of contact (other than those listed in 7.4.5 and 7.4.6 above) authorized to receive electronic correspondence regarding this RFP.

4.1.4.8 Acknowledgement that your company’s data at the System for Award Management website is current per FAR 52.204-7, System for Award Management. This clause is included in Section 00 70 00 of this RFP.

4.1.5 Following the proposal cover sheet, Volume 2 should be organized into the following tabbed sections:

4.1.5.1 Standard Form, Solicitation, Offer and Acknowledgement of Amendments (SF1442). If hard copies are submitted, these documents should be secured within some form of document protector and not “hole punched”. The SF1442 shall be completed by the Offeror and duly executed with an original signature by an official authorized to bind the company in accordance with instruction at FAR 4.102. Include with the Offeror’s name and address in Block 14 of the SF1442, your company’s DUNS, CAGE, and Tax Identification

numbers. Offerors shall acknowledge all amendments to the solicitation in block 19. If the Offeror fails to acknowledge all amendments, the proposal (Volumes 1 and 2) will be considered non-responsive and shall not be evaluated further.

4.1.5.2 Proposal Schedule. Your proposed price for this project shall be in the form of the Proposal Schedule provided in the solicitation. **Offerors may not modify the proposal schedule wording or format.** As this is a firm, fixed price contract, price proposals will not be considered which provide for subsequent increases in price. No qualified price proposal of any type will be accepted; therefore, all offers containing such qualifications will be considered unacceptable. If the Offeror does not comply with all requirements of the proposal forms, the proposal may be considered unacceptable and eliminated from consideration.

4.1.5.3 Bid Guarantee/Bond (SF24). This tab shall contain an executed bid bond for either 20% or $3 Million, whichever is less. The hard copy documents that will be mailed in should be secured within some form of document protector and not “hole-punched.” Failure to furnish a bid bond in proper form and amount in your Price Proposal may result in the offeror’s proposal being rejected from further consideration.

4.1.5.4 Certifications/Representations and other Statements of Offerors. This tab shall contain Section 00 45 00 of this solicitation, including the Representation & Certifications cover page completed by the Offeror (to include provision 52.204-26 Covered Telecommunications Equipment or Services). Complete all provisions and fill in all applicable areas. In addition, Offerors shall include in this tab their completed electronic Representations and Certifications from the SAM.gov website. Since FAR 52.204-7 System for Award Management is applicable to this solicitation, the offeror in accordance with FAR 52.204-8 (d) is required to complete the annual representations and certifications electronically via the SAM Web site accessed through https://www.sam.gov. After reviewing the SAM database information, the offeror verifies by submission of the offer that the representations and certifications currently posted electronically that apply to this solicitation as indicated in paragraph (c) of this provision have been entered or updated within the last 12 months, are current, accurate, complete, and applicable to this solicitation (including the business size standard applicable to the NAICS code referenced for this solicitation), as of the date of this offer and are incorporated in this offer by reference (see FAR 4.1201); except for the changes identified by the offeror under this provision.

4.1.5.5 Financials and Financial Standing Questionnaire. Offerors shall provide their latest balance sheet and income statement, including names of banks or other financial institutions with which your firm conducts business. If the financial statements are more than 60 days old, a certificate should be attached stating that the financial condition is substantially the same, or if not the same, state the changes that have taken place. The financial statements will be treated

as confidential. The Financial Standing Questionnaire provided at the end of this section of the RFP is required to be submitted under this section.

4.1.5.6 Small Business Subcontracting Plan. Only large business Offerors are required to submit a subcontracting plan. The plan shall be prepared in accordance with FAR 52.219-9 (DEV), DFARS 252.219-7003, and AFARS Appendix DD. The Offeror shall take into consideration when preparing the required subcontracting plan, that only those subcontracts which are awarded directly by the prime contractor to small and small disadvantaged firms can be included in the plan. Subcontracts to be awarded by a large business subcontractor are subject to the flow-down provisions of the clause and shall be reported by that subcontractor electronically via eSRS (https://www.esrs.gov). Failure to submit an acceptable subcontracting plan shall make the Offeror ineligible for the award of the contract. The format for the subcontracting plan and subcontracting goals applicable to this solicitation are provided at the end of section 002216. Subcontracting plans will be evaluated on an ACCEPTABLE/UNACCEPTABLE basis. The Subcontracting Plan must adequately respond to each of the required elements of FAR 52.219-9(d) paragraphs (1) through (15).

4.1.5.7 JV Agreement and/or Corporate, Partnership, Joint Venture Certificate. If applicable, the offeror shall provide a copy of the firm's JV Agreement. The offeror shall provide a completed copy of the Corporate Partnership, Joint Venture Certificate provided in the RFP.

4.1.5.8 Teaming Agreement. If utilizing a Teaming Arrangement, as part of your proposal, the offeror must provide a contractor team agreement signed by all parties, identifying the legal name(s) of all entities, and describing the nature of each entity's relationship (teaming/partnering, joint venture, mentor/protégé, etc.)

4.2. FACTOR 4: COST/PRICE FACTOR. Adjectival ratings shall not be used for offerors' Cost/Price proposals. The Government will fully evaluate and, if necessary, negotiate all priced Contract Line Item Numbers (CLINs) for award. For award purposes, the total proposed price for all CLINs will be added together into a total sum (contract value). The evaluation of all option CLINs will not obligate the Government to exercise any option.

4.2.1 The Offeror's Cost/Price proposal will be evaluated as follows.

4.2.1.1 FFP Evaluation. For a price to be fair and reasonable, it must represent a price to the Government that a prudent person would pay in the conduct of competitive business. The Offeror's proposed fixed-price CLINs may be evaluated, using one or

more of the techniques described in FAR 15.404-1 in order to determine if they are fair and reasonable.

4.2.1.2 Overall Cost/ Price Proposal Evaluation: The overall Cost/Price proposal will be evaluated for the following:

4.2.1.2.1 Compliance: The Cost/Price proposal submitted by the Offeror will be evaluated for compliance based upon the submission requirements contained in this Section 00 22 16, Volume 2-- Cost/Price instructions.

4.2.1.2.2 Errors: The Offeror's Cost/Price proposal will be reviewed for errors. The Offeror may be given an opportunity to clarify certain aspects of their proposal at the sole discretion of the Contracting Officer.

4.2.1.2.3 Total Evaluated Price: The Total Evaluated Price consists of summing the Offeror's proposed fixed-price CLIN prices for the base bid and any/all optional CLINs.

C. BASIS FOR AWARD

1.1 Proposals must meet the criteria stated in the RFP in order to be eligible for award, to include responsiveness, technical acceptability, and responsibility.

1.2 The Government intends to award without discussions based on the initial proposals received, therefore, the proposals shall contain the Offeror's best terms from a cost and technical standpoint. However, the Government reserves the right to conduct discussions in accordance with FAR 52.215-1 if the discussions are deemed necessary at the Government's discretion. The Government reserves the right to address any pertinent issues in the proposals.

1.3 The award will be made to the lowest priced technically acceptable proposal. Proposals will be evaluated for technical acceptability (including past performance) but will not be ranked using the non-price Factors (and Subfactors). In order for an Offeror to be considered for award, the proposal **must** receive an "Acceptable" rating in every non-price Factor. A proposal receiving a rating of "Unacceptable" in any non-price Factor will not be eligible for award. Additionally, any other than small business offeror must have an acceptable Small Business Subcontracting Plan to receive an award in accordance with Federal Acquisition Regulation (FAR) 19.702(a).

2. EVALUATION

2.1 Each member of the Source Selection Evaluation Board (SSEB) will independently consider all information provided in the technical proposal (non-priced factors). Once these individual analyses are completed, the team will meet and

determine a rating for each of the evaluation Factors by consensus decision. The evaluation team will document their decision to support the rating for each Factor.

2.2 The Past Performance Factor considers each Offeror's demonstrated record of performance as explained in more detail above in Factor 3. The past performance evaluation will consider recency (within 7 years from RFP closing date) and relevancy (similar scope, type, magnitude) of the projects submitted as well as trends in the Offeror's performance record.

2.3 Past Performance information will be reviewed to determine the quality of the Offeror's performance, general trends, and usefulness of the information and incorporate these into the evaluation rating.

2.4 The Government will evaluate the offeror's probability of meeting the minimum past performance solicitation requirements and prior compliance with FAR 52.219-8 Utilization of Small Business Concerns and FAR 52.219-9 Small Business Subcontracting Plan (if applicable). The Government will utilize the rating descriptions outlined below (see Table 3 to evaluate Past Performance).

2.5 Documentation and comments are required for all ratings. This consensus rating will be provided to the Source Selection Authority who, independently exercising prudent business judgment, will select the most qualified Contractor.

3. DEFINITIONS:

3.1 Rating. The adjective descriptor assigned by the evaluators to the non-Cost/Price Factors. It represents their conclusions as to the contractor's ability to meet the minimum standards of acceptability.

3.2 Factor Rating Definitions.

3.2.1 Technical Rating. In accordance with the Army Source Selection Supplement (AS3), Appendix A, the Army methodology for evaluating Technical Factors is to assign a rating of Acceptable or Unacceptable to each factor (see Table 2 below). Proposals are evaluated for acceptability, but not ranked using the non-cost/price factors. The Government will assess whether the offeror's proposal will satisfy the Government's minimum requirements.

Table 2: Technical Ratings

TECHNICAL ACCEPTABLE/UNACCEPTABLE RATINGS	
Rating	**Definition**
Acceptable	Proposal meets the requirements of the solicitation.
Unacceptable	Proposal does not meet the requirements of the solicitation.

3.2.2 Past Performance Rating. The adjectival ratings below will be used to rate non-

priced Factor 3, Past Performance.

Table 3: Past Performance Evaluation Ratings	
Rating	**Definition**
Acceptable	Based on the offeror's performance record, the Government has a reasonable expectation that the offeror will successfully perform the required effort, or the offeror's performance record is unknown.
Unacceptable	Based on the offeror's performance record, the Government does not have a reasonable expectation that the offeror will be able to successfully perform the required effort.

D. DISCUSSIONS

1.1 GENERAL INFORMATION. In accordance with FAR 15.306(d), discussion sessions with each offeror may be held. Should discussions take place, all offerors in the competitive range will be notified and allowed to submit Final Proposal Revisions if discussions require such revisions.

1.2 DISCUSSION SCHEDULING. If discussions are conducted, the Contracting Officer will schedule the discussion sessions, and each offeror will be notified. The Contracting Officer will provide additional instructions with the notification.

END OF SECTION

SUBCONTRACTING PLAN INFORMATION FOR VOLUME 2, TAB E

Contractor shall provide detailed explanations/documentation supporting the proposed subcontracting goals. All proposed socioeconomic goals shall be substantiated with the Offeror's supported market research. Proposing only the minimum Department of Defense Office of Small Business Programs statutory goals, without providing substantiated market research may result in an Unacceptable rating. Please note that in accordance with DFARS 219.705-4 the minimum subcontracting requirement to Small Disadvantaged Businesses is 5.0%.

1. SUBMIT YOUR PLAN IN THE ATTACHED FORMAT

2. Subcontracting Plans will be evaluated in accordance with FAR Clause 52.219-9 and AFARS Appendix DD.

3. If you have identified specific small businesses by name in the technical part of your proposal as businesses you intend to utilize on this contract, you must also list them in your subcontracting plan.

* An Indian tribe or tribally owned corporation does not have to qualify as a small business concern to be counted toward the Small Disadvantaged Business goal.

This template may be used by offerors in preparing their subcontracting plan. It is the responsibility of the offeror to ensure that its subcontracting plan meets the requirements of FAR 52.219-9 and is comparative to the commitments in its Small Business Participation Commitment Document.

SUBCONTRACTING PLAN

SOLICITATION NO.: W912PP23R0005

FY23 VA NRM Repair/Replace Elevators in B-41, Raymond G. Murphy VA Medical Center, BERNALILLO COUNTY, NEW MEXICO

Company Name:

DUNS #:
Cage Code
Tax ID#
Address:

PLAN TYPE: INDIVIDUAL SUBCONTRACTING PLAN

1. ACQUISITION:

Total dollar value of contract proposal including all options: $_____

2. GOALS (52.219-9(d)(1-2)):

Below indicate the dollar and percentage goals for Small Business (SB), Small Disadvantaged (SDB) including Alaska Native Corporations and Indian Tribes, Women-owned and Economically Disadvantaged Women-Owned (WOSB), Historically Underutilized Business Zone (HUBZone), Veteran Owned Small Business (VOSB), Service-Disabled Veteran-Owned (SDVOSB) Small Businesses and "Other than Small Business" (Other) as subcontractors.
In accordance with DFARS 219.705-4, the minimum subcontracting requirement for **SDB businesses is 5.0%.

(a)	Total estimated dollar value of **ALL planned subcontracting**, i.e., with ALL types of concerns under this contract and percent of planned subcontracting dollars (% of total value).	$_____	_____%
(b)	Total estimated dollar value and percent of planned subcontracting with **SMALL BUSINESSES** (including SDB, WOSB, HUBZone, VOSB and SDVOSB): (% of "a")	$_____	_____%
(c)	Total estimated dollar value and percent of planned subcontracting with **SMALL DISADVANTAGED BUSINESSES**: (% of "a")	$_____	_____%
(d)	Total estimated dollar value and percent of planned subcontracting with **WOMEN-OWNED SMALL BUSINESSES**: (% of "a")	$_____	_____%
(e)	Total estimated dollar and percent of planned subcontracting with **HUBZone SMALL BUSINESSES**: (% of "a")	$_____	_____%

(f)	Total estimated dollar and percent of planned subcontracting with **Veteran-Owned SMALL BUSINESSES**: (% of "a")	$_____	_____%
(g)	Total estimated dollar and percent of planned subcontracting with **Service-Disabled Veteran-Owned SMALL BUSINESSES**: (% of "a")	$_____	_____%
(h)	Total estimated dollar and percent of planned subcontracting with **"OTHER THAN SMALL BUSINESSES"** (As defined by the Small Business Administration as "any entity that is not classified as a small business. This includes large businesses, state and local governments, non-profit organizations, public utilities, educational institutions and foreign-owned firms.) (% of "a")	$_____	_____%

3. COMPANY'S POLICY (AFARS DD-301(1))

Provide your company's policy statement to Pub. L. 99-661, Section 1207, and Pub.L. 100-180, Section 806 (subcontracting to small business concerns). Describe special emphasis placed on subcontracting with SDBs. Describe corporate and management commitment to meeting your subcontracting plan.

4. DESCRIPTION OF SUPPLIES/SERVICES (FAR 52.219-9(d)(3)):

Provide a description of ALL the supplies and services to be subcontracted and identify the types of supplies or services planned for subcontracting to small business (including ANCs and Indian tribes), VOSB, SDVOSB, HUBZone, SDB and WOSB concerns.

5. DESCRIPTION OF THE METHOD USED TO DEVELOP SUBCONTRACTING GOALS FOR SB AND SB CONCERNS (FAR 52.219-9(d)(4)):

Provide a description of the method used to develop the subcontracting goals for SB, SDB, WOSB, HUBZone and SDVOSB concerns.

6. POTENTIAL SOURCES FOR SOLICITATION (FAR 52.219-9(d)(5)):

Provide a description of the method used to identify potential sources for the solicitation (e.g., existing company source lists, SAM, veterans service organizations, the National Minority Purchasing Council Vendor Information Service, the Research and Information Division of the Minority Business Development Agency in the Department of Commerce, or small, HUBZone, small disadvantaged, and women-owned small business trade associations). Identify any source lists or other resources used in the determination process.

7. INDIRECT COST (FAR 52.219-9(d)(6)):

Indirect and overhead costs _____HAVE /_____HAVE NOT been included in the subcontracting goals.

If indirect costs HAVE been included, explain the method used to determine the proportionate share of such costs to be allocated as subcontracts to SB, SDB, WOSB, HUBZone, VOSB and SDVOSB concerns:

_____

_____

8. PROGRAM ADMINISTRATOR (FAR 52.219-9(d)(7)):

This individual is employed by our company and will be the administrator of our Subcontracting Program:

Name: Title: Address:
Telephone Number:
E-Mail Address:

Duties : Does the individual named above have general overall responsibility for the company's subcontracting program, i.e., developing, preparing, and executing subcontracting plans and monitoring performance relative to the requirements of those subcontracting plans and perform the following duties? (If NO is checked, please indicate who in the company performs those duties, or indicate why the duties are not performed in your company)

YES	NO	Duties
____	____	Developing and promoting company-wide policy initiatives that demonstrate the company's support for awarding contracts and subcontracts to SB, SDB, WOSB, HUBZone, VOSB and SDVOSB concerns; and for assuring that these concerns are included on the source lists for solicitations for products and services they are capable of providing;
____	____	Developing and maintaining bidder source lists of SB, SDB, WOSB, HUBZone, VOSB and SDVOSB concerns from all possible sources;
____	____	Ensuring periodic rotation of potential subcontractors on bidder's lists;
____	____	Assuring that SB, SDB, WOSB, HUBZone, VOSB and SDVOSB businesses are included on the bidders' list for every subcontract solicitation for products and services that they are capable of providing.
____	____	Ensuring that Requests for Proposals (RFPs) are designed to permit the maximum practicable participation of SB, SDB, WOSB, HUBZone, VOSB and SDVOSB concerns.
____	____	Reviewing subcontract solicitations to remove statements, clauses, etc., which might tend to restrict or prohibit small, 8(a), SDB, WOSB, HUBZone, VOSB and SDVOSB small business participation.
____	____	Accessing various sources for the identification of SB, SDB, WOSB, HUBZone, VOSB and SDVOSB concerns to include the System for Award Management (http://sam.gov), local small business and minority associations, local chambers of commerce and Federal agencies' Small Business Offices;
____	____	Establishing and maintaining contract and subcontract award records;
____	____	Participating in Business Opportunity Workshops, Minority Business Enterprise Seminars, Trade Fairs, Procurement Conferences, etc;
____	____	Ensuring that SB, SDB, WOSB, HUBZone, VOSB and SDVOSB concerns are made aware of subcontracting opportunities and assisting concerns in preparing responsive bids to the company;
____	____	Conducting or arranging for the conduct of training for purchasing personnel regarding the intent and impact of Section 8(d) of the Small Business Act, as amended;
____	____	Monitoring the company's subcontracting program performance and making any adjustments necessary to achieve the subcontract plan goals;
____	____	Preparing and submitting timely, required subcontract reports;
____	____	Conducting or arranging training for purchasing personnel regarding the intent and impact of 8(d) of the Small Business Act on purchasing procedures;
____	____	Coordinating the company's activities during the conduct of compliance reviews by Federal agencies;
		Other duties:

_____
_____
_____
_____

9. EQUITABLE OPPORTUNITY (FAR 52.219-9(d)(8)):
Describe efforts the Offeror will undertake to ensure that SB, SDB, WOSB, HUBZone, VOSB and SDVOSB concerns will have an equitable opportunity to compete for subcontracts.

10. STATEMENT OF FLOW DOWN (FAR 52.219-9(d)(9)):

The Offeror provides assurance that:

YES	**Assertion:**
_____	(a) Clause 52.219-8 Utilization of Small Business Concerns will be included in all subcontracts that offer further subcontracting opportunities.
_____	(b) All subcontractors (except small businesses) that receive subcontracts in excess of $700,000 ($1.5 million for Construction) will be required to adopt a plan that complies with the requirements of the clause at 52.219-9 Small Business Subcontracting Plan.

11. REPORTING AND COOPERATION (FAR 52.219-9(d)(10)):

The Offeror provides assurance to:

YES	**Assertion:**
_____	(a) Cooperate in any studies or surveys as may be required
_____	(b) Submit periodic reports so that the Government can determine the extent of compliance by the Offeror with the subcontracting plan.
_____	(c) Submit the Individual Subcontract Report (ISR), and the Summary Subcontract Report (SSR) using the Electronic Subcontracting Reporting System (eSRS) (http://www.esrs.gov), following the instructions in the eSRS

(i) The ISR shall be submitted semi-annually during contract performance for the periods ending March 31 and September 30. A report is also required for each contract within 30 days of contract completion. Reports are due 30 days after the close of each reporting period, unless otherwise directed by the contracting officer. Reports are required when due, regardless of whether there has been any subcontracting activity since the inception of the contract or the previous reporting period. When a contracting officer rejects an ISR, the contractor is required to submit a revised ISR within 30 days of receiving the notice of the ISR rejection.

(ii) The SSR shall be submitted annually by October 30 for the twelve-month period ending September 30. When an SSR is rejected, the contractor is required to submit a revised SSR within 30 days of receiving the notice of SSR rejection;

_____	(d) Ensure that subcontractors with subcontracting plans agree to submit the ISR and/or the SSR using the eSRS

_____ (e) Provide prime contract number and DUNS number, and the e-mail address of the Offeror's official responsible for acknowledging receipt of or rejecting the ISRs to all first-tier subcontractors with subcontracting plans so they can enter this information into the eSRS when submitting their ISRs

_____ (f) Require that each subcontractor with a subcontracting plan provide the prime contract number, its own DUNS number, and the e-mail address of the subcontractor's official responsible for acknowledging receipt of or rejecting the ISRs, to subcontractors with subcontracting plans

12. RECORD KEEPING (FAR 52.219-9(d)(11)):

FAR 52.219-9(d)(11) requires a description list of the types of records your company will maintain to demonstrate the procedures adopted to comply with the requirements and goals in the subcontracting plan. The following is a recitation of the types of records the Offeror will maintain to demonstrate the procedures adopted to comply with the requirements and goals in the subcontracting plan. These records will include, but are not be limited to, the following:

(a) SB, SDB, WOSB, HUBZone, VOSB and SDVOSB source lists, guides and other data identifying such vendors;
(b) Organizations contacted in an attempt to locate SB, SDB, WOSB, HUBZone, VOSB and SDVOSB sources;
(c) On a contract-by-contract basis, records on all subcontract solicitations over Simplified Acquisition Threshold, which indicate for each solicitation (1) whether SB, SDB, WOSB, HUBZone, VOSB and/or SDVOSB concerns were solicited, if not, why not and the reasons solicited concerns did not receive subcontract awards;
(d) Records to support other outreach efforts, e.g., (A) Trade associations; (B) Business development organizations; (C) Conferences and trade fairs to locate small, HUBZone small, small disadvantaged, service-disabled veteran-owned, and women-owned small business sources; and (D) Veterans service organizations.
(e) Records to support internal guidance and encouragement provided to buyers through (1) workshops, seminars, training programs, incentive awards; and (2) monitoring performance to evaluate compliance with the program and requirements; and
(f) On a contract-by-contract basis, records to support subcontract award data including the name, address, and business type and size of each subcontractor. (This is not required on a contract–by–contract basis for commercial plans.)
(g) Other records to support your compliance with the subcontracting plan: (Please describe)
_____
_____
_____

13. GOOD FAITH EFFORT (FAR 52.219-9(d)(12))

Maximum practicable utilization of SB, SDB, WOSB, HUBZone, VOSB and SDVOSB concerns as subcontractors in Government contracts is a matter of national interest with both social and economic benefits. When a contractor fails to make a good faith effort to comply with a subcontracting plan, these objectives are not achieved, and 15 U.S.C. 637(d) (4) (F) directs that liquidated damages shall be paid by the contractor.

(a) Provide assurance that the Offeror will make a good faith effort to acquire articles, equipment, supplies, services, or materials, or obtain the performance of construction work from the small business concerns that it used in preparing the bid or proposal, in the same or greater scope,

amount, and quality used in preparing and submitting the bid or proposal. Responding to a request for a quote does not constitute use in preparing a bid or proposal. The Offeror used a small business concern in preparing the bid or proposal if—

(i) The Offeror identifies the small business concern as a subcontractor in the bid or proposal or associated small business subcontracting plan, to furnish certain supplies or perform a portion of the subcontract; or

(ii) The Offeror used the small business concern's pricing or cost information or technical expertise in preparing the bid or proposal, where there is written evidence of an intent or understanding that the small business concern will be awarded a subcontract for the related work if the Offeror is awarded the contract.

(b) In order to demonstrate your compliance with a good faith effort to achieve the SB, SDB, WOSB, HUBZone, VOSB and SDVOSB small business subcontracting goals, outline the steps your company plans to take.

_____
_____
_____

14. PERFORMANCE (FAR 52.219-9(d)(13))

Provide assurances that the Offeror will provide to the Contracting Officer, within 30 days of contract completion, a written explanation if the contractor fails to acquire articles, equipment, supplies, services or materials or obtain the performance of construction work as described in the bid or proposal.

15. SUBCONTRACTORS (FAR 52.219-9(d)(14 -15))

The Offeror provides assurance to:

YES	**Assertion:**
_____	(a) Not prohibit a subcontractor from discussing with the Contracting Officer any material matter pertaining to payment to or utilization of a subcontractor.
_____	(b) Pay its small business subcontractors on time and in accordance with the terms and conditions of the underlying subcontract, and notify the contracting officer when the prime contractor makes either a reduced or an untimely payment to a small business subcontractor (see 52.242-5).

NOTE: NAVFAC/USACE REQUESTS THAT THE CLIENT COMPLETES THIS QUESTIONNAIRE AND SUBMITS DIRECTLY BACK TO THE OFFEROR. THE OFFEROR WILL SUBMIT THE COMPLETED QUESTIONNAIRE TO USACE WITH THEIR PROPOSAL, AND MAY DUPLICATE THIS QUESTIONNAIRE FOR FUTURE SUBMISSION ON USACE SOLICITATIONS. CLIENTS ARE HIGHLY ENCOURAGED TO SUBMIT QUESTIONNAIRES DIRECTLY TO THE OFFEROR. HOWEVER, QUESTIONNAIRES MAY BE SUBMITTED DIRECTLY TO USACE. PLEASE CONTACT THE OFFEROR FOR USACE POC INFORMATION. THE GOVERNMENT RESERVES THE RIGHT TO VERIFY ANY AND ALL INFORMATION ON THIS FORM.

CONTROL #: W912PP23R0005

ADJECTIVE RATINGS AND DEFINITIONS TO BE USED TO BEST REFLECT YOUR EVALUATION OF THE CONTRACTOR'S PERFORMANCE

RATING	DEFINITION	NOTE
(E) Exceptional	Performance meets contractual requirements and exceeds many to the Government/Owner's benefit. The contractual performance of the element or sub-element being assessed was accomplished with few minor problems for which corrective actions taken by the contractor was highly effective.	An Exceptional rating is appropriate when the Contractor successfully performed multiple significant events that were of benefit to the Government/Owner. A singular benefit, however, could be of such magnitude that it alone constitutes an Exceptional rating. Also, there should have been NO significant weaknesses identified.
(VG) Very Good	Performance meets contractual requirements and exceeds some to the Government's/Owner's benefit. The contractual performance of the element or sub-element being assessed was accomplished with some minor problems for which corrective actions taken by the contractor were effective.	A Very Good rating is appropriate when the Contractor successfully performed a significant event that was a benefit to the Government/Owner. There should have been no significant weaknesses identified.
(S) Satisfactory	Performance meets minimum contractual requirements. The contractual performance of the element or sub-element contains some minor problems for which corrective actions taken by the contractor appear or were satisfactory.	A Satisfactory rating is appropriate when there were only minor problems, or major problems that the contractor recovered from without impact to the contract. There should have been NO significant weaknesses identified. Per DOD policy, a fundamental principle of assigning ratings is that contractors will not be assessed a rating lower than Satisfactory solely for not performing beyond the requirements of the contract.
(M) Marginal	Performance does not meet some contractual requirements. The contractual performance of the element or sub-element being assessed reflects a serious problem for which the contractor has not yet identified corrective actions. The contractor's proposed actions appear only marginally effective or were not fully implemented.	A Marginal is appropriate when a significant event occurred that the contractor had trouble overcoming which impacted the Government/Owner.
(U) Unsatisfactory	Performance does not meet most contractual requirements and recovery is not likely in a timely manner. The contractual performance of the element or sub-element contains serious problem(s) for which the contractor's corrective actions appear or were ineffective.	An Unsatisfactory rating is appropriate when multiple significant events occurred that the contractor had trouble overcoming and which impacted the Government/Owner. A singular problem, however, could be of such serious magnitude that it alone constitutes an unsatisfactory rating.
(N) Not Applicable	No information or did not apply to your contract	Rating will be neither positive nor negative.

TO BE COMPLETED BY CLIENT

PLEASE CIRCLE THE ADJECTIVE RATING WHICH BEST REFLECTS YOUR EVALUATION OF THE CONTRACTOR'S PERFORMANCE.

1. QUALITY:						
a) Quality of technical data/report preparation efforts	E	VG	S	M	U	N
b) Ability to meet quality standards specified for technical performance	E	VG	S	M	U	N
c) Timeliness/effectiveness of contract problem resolution without extensive customer guidance	E	VG	S	M	U	N
d) Adequacy/effectiveness of quality control program and adherence to contract quality assurance requirements (without adverse effect on performance)	E	VG	S	M	U	N
2. SCHEDULE/TIMELINESS OF PERFORMANCE:						
a) Compliance with contract delivery/completion schedules including any significant intermediate milestones. *(If liquidated damages were assessed or the schedule was not met, please address below)*	E	VG	S	M	U	N
b) Rate the contractor's use of available resources to accomplish tasks identified in the contract	E	VG	S	M	U	N
3. CUSTOMER SATISFACTION:						
a) To what extent were the end users satisfied with the project?	E	VG	S	M	U	N
b) Contractor was reasonable and cooperative in dealing with your staff (including the ability to successfully resolve disagreements/disputes; responsiveness to administrative reports, businesslike and communication)	E	VG	S	M	U	N
c) To what extent was the contractor cooperative, businesslike, and concerned with the interests of the customer?	E	VG	S	M	U	N
d) Overall customer satisfaction	E	VG	S	M	U	N
4. MANAGEMENT/ PERSONNEL/LABOR						
a) Effectiveness of on-site management, including management of subcontractors, suppliers, materials, and/or labor force?	E	VG	S	M	U	N
b) Ability to hire, apply, and retain a qualified workforce to this effort	E	VG	S	M	U	N
c) Government Property Control	E	VG	S	M	U	N
d) Knowledge/expertise demonstrated by contractor personnel	E	VG	S	M	U	N
e) Utilization of Small Business concerns	E	VG	S	M	U	N
f) Ability to simultaneously manage multiple projects with multiple disciplines	E	VG	S	M	U	N
g) Ability to assimilate and incorporate changes in requirements and/or priority, including planning, execution and response to Government changes	E	VG	S	M	U	N
h) Effectiveness of overall management (including ability to effectively lead, manage and control the program)	E	VG	S	M	U	N
5. COST/FINANCIAL MANAGEMENT						
a) Ability to meet the terms and conditions within the contractually agreed price(s)?	E	VG	S	M	U	N
b) Contractor proposed innovative alternative methods/processes that reduced cost, improved maintainability or other factors that benefited the client	E	VG	S	M	U	N
c) If this is/was a Government cost type contract, please rate the Contractor's timeliness and accuracy in submitting monthly invoices with appropriate back-up documentation, monthly status reports/budget variance reports, compliance	E	VG	S	M	U	N

with established budgets and avoidance of significant and/or unexplained variances (under runs or overruns)						
d) Is the Contractor's accounting system adequate for management and tracking of costs? *If no, please explain in Remarks section.*	Yes			No		
e) If this is/was a Government contract, has/was this contract been partially or completely terminated for default or convenience or are there any pending terminations? *Indicate if show cause or cure notices were issued, or any default action in comment section below.*	Yes			No		
f) Have there been any indications that the contractor has had any financial problems? *If yes, please explain below.*	Yes			No		
6. SAFETY/SECURITY						
a) To what extent was the contractor able to maintain an environment of safety, adhere to its approved safety plan, and respond to safety issues? (Includes: following the users rules, regulations, and requirements regarding housekeeping, safety, correction of noted deficiencies, etc.)	E	VG	S	M	U	N
b) Contractor complied with all security requirements for the project and personnel security requirements.	E	VG	S	M	U	N
7. GENERAL						
a) Ability to successfully respond to emergency and/or surge situations (including notifying COR, PM or Contracting Officer in a timely manner regarding urgent contractual issues).	E	VG	S	M	U	N
b) Compliance with contractual terms/provisions *(explain if specific issues)*	E	VG	S	M	U	N
c) Would you hire or work with this firm again? *(If no, please explain below)*	Yes			No		
d) In summary, provide an overall rating for the work performed by this contractor.	E	VG	S	M	U	N

Please provide responses to the questions above (*if applicable*) and/or additional remarks. Furthermore, please provide a brief narrative addressing specific strengths, weaknesses, deficiencies, or other comments which may assist our office in evaluating performance risk *(please attach additional pages if necessary)***:**

FINANCIAL STANDING QUESTIONNAIRE

Solicitation W912PP23R0005, FY23 VA NRM Repair/Replace Elevators in B-41, Raymond G. Murphy VA Medical Center, BERNALILLO COUNTY, NEW MEXICO

A primary consideration in our selection process is an affirmation determination of the contractor's responsibility, qualification, and financial standing. Prior to awarding a contract, per the Federal Acquisition Regulation (FAR) Part 9, the U.S. Army Corps of Engineers must determine through acceptable evidence that the contractor has adequate financial resources to perform the contract, or the ability to obtain the financial resources, or proposes to perform the contract by subcontracting.

Please make every effort to be thorough in your answers/comments and include the completed questionnaire in your proposal.

Please contact David Terhune, Contract Specialist, David.e.terhune@usace.army.mil with any questions or concerns.

A. GENERAL INFORMATION

Contractor Name:
Point of Contact:
Telephone:
Email:

B. RESPONDENT INFORMATION (Person completing this form)

Name and Title: _____
Organization and Address: _____
Telephone/Fax: _____
Email: _____

1. Does the contractor have an active account with your financial institution?
2. How long has this account been active?
3. What is their average balance (digits only)?
4. How many returns (insufficient funds) has the contractor had in the last 12 months?
5. How many loans does the contractor currently have outstanding?
6. Has the vendor been able to meet their financial obligations on time?
7. Do they have a line of credit? If so, what is that amount (digits only)?

NOTE: The financial questionnaire is to be "**COMPLETED BY YOUR FINANCIAL INSTITUTION**." Please return the completed document with an affixed bank seal and signature of the referenced individual on the questionnaire. Failure to provide the requested information will result in exclusion from further consideration.

Section 00 45 00 - Representations and Certifications

REPS AND CERTS
THIS DOCUMENT IS TO BE EXECUTED AND SUBMITTED WITH YOUR OFFER.

REPRESENTATIONS, CERTIFICATIONS, AND OTHER STATEMENTS OF OFFEROR

RFP NO. **W912PP23R0005**

PROJECT NAME/LOCATION: FY23 VA NRM Repair/Replace Elevators in B-41, Raymond G. Murphy VA Medical Center, Bernalillo County, NM.

OFFEROR'S NAME AND ADDRESS

_____

_____

_____

_____

Date: _____

The Offeror makes the following representations and certifications as a part of the RFP identified above (check the appropriate boxes that follow):

CLAUSES INCORPORATED BY REFERENCE

52.209-7	Information Regarding Responsibility Matters	OCT 2018
52.236-28	Preparation of Proposals--Construction	OCT 1997
252.203-7005	Representation Relating to Compensation of Former DoD Officials	SEP 2022
252.204-7008	Compliance With Safeguarding Covered Defense Information Controls	OCT 2016

CLAUSES INCORPORATED BY FULL TEXT

52.204-8 ANNUAL REPRESENTATIONS AND CERTIFICATIONS (MAY 2022)

(a)(1) The North American Industry Classification System (NAICS) code for this acquisition is 238290.

(2) The small business size standard is 22,000,000.

(3) The small business size standard for a concern that submits an offer, other than on a construction or service acquisition, but proposes to furnish an end item that it did not itself manufacture, process, or produce is 500 employees if the acquisition--

(i) Is set aside for small business and has a value above the simplified acquisition threshold;

(ii) Uses the HUBZone price evaluation preference regardless of dollar value, unless the offeror waives the price evaluation preference; or

(iii) Is an 8(a), HUBZone, service-disabled veteran-owned, economically disadvantaged women-owned, or women-owned small business set-aside or sole-source award regardless of dollar value.

(b)(1) If the provision at 52.204-7, System for Award Management, is included in this solicitation, paragraph (d) of this provision applies.

(2) If the provision at 52.204-7, System for Award Management, is not included in this solicitation, and the Offeror has an active registration in the System for Award Management (SAM), the Offeror may
choose to use paragraph (d) of this provision instead of completing the corresponding individual representations and certifications in the solicitation. The Offeror shall indicate which option applies by
checking one of the following boxes:

( ) Paragraph (d) applies.

( ) Paragraph (d) does not apply and the offeror has completed the individual representations and certifications in the solicitation.

(c) (1) The following representations or certifications in SAM are applicable to this solicitation as indicated:

(i) 52.203-2, Certificate of Independent Price Determination. This provision applies to solicitations when a firm-fixed-price contract or fixed-price contract with economic price adjustment is contemplated, unless—

(A) The acquisition is to be made under the simplified acquisition procedures in Part 13;

(B) The solicitation is a request for technical proposals under two-step sealed bidding procedures; or

(C) The solicitation is for utility services for which rates are set by law or regulation.

(ii) 52.203-11, Certification and Disclosure Regarding Payments to Influence Certain Federal Transactions. This provision applies to solicitations expected to exceed $150,000.

(iii) 52.203-18, Prohibition on Contracting with Entities that Require Certain Internal Confidentiality Agreements or Statements--Representation. This provision applies to all solicitations.

(iv) 52.204-3, Taxpayer Identification. This provision applies to solicitations that do not include the provision at 52.204-7, System for Award Management.

(v) 52.204-5, Women-Owned Business (Other Than Small Business). This provision applies to solicitations that—

(A) Are not set aside for small business concerns;

(B) Exceed the simplified acquisition threshold; and

(C) Are for contracts that will be performed in the United States or its outlying areas.

(vi) 52.204-26, Covered Telecommunications Equipment or Services--Representation. This provision applies to all solicitations.

(vii) 52.209-2, Prohibition on Contracting with Inverted Domestic Corporations--Representation.

(viii) 52.209-5, Certification Regarding Responsibility Matters. This provision applies to solicitations where the contract value is expected to exceed the simplified acquisition threshold.

(ix) 52.209-11, Representation by Corporations Regarding Delinquent Tax Liability or a Felony Conviction under any Federal Law. This provision applies to all solicitations.

(x) 52.214-14, Place of Performance--Sealed Bidding. This provision applies to invitations for bids except those in which the place of performance is specified by the Government.

(xi) 52.215-6, Place of Performance. This provision applies to solicitations unless the place of performance is specified by the Government.

(xii) 52.219-1, Small Business Program Representations (Basic, Alternates I, and II). This provision applies to solicitations when the contract is for supplies to be delivered or services to be performed in the United States or its outlying areas, or when the contracting officer has applied part 19 in accordance with 19.000(b)(1)(ii).

(A) The basic provision applies when the solicitations are issued by other than DoD, NASA, and the Coast Guard.

(B) The provision with its Alternate I applies to solicitations issued by DoD, NASA, or the Coast Guard.

(C) The provision with its Alternate II applies to solicitations that will result in a multiple-award contract with more than one NAICS code assigned.

(xiii) 52.219-2, Equal Low Bids. This provision applies to solicitations when contracting by sealed bidding and the contract is for supplies to be delivered or services to be performed in the United States or its outlying areas, or when the contracting officer has applied part 19 in accordance with 19.000(b)(1)(ii).

(xiv) 52.222-22, Previous Contracts and Compliance Reports. This provision applies to solicitations that include the clause at 52.222-26, Equal Opportunity.

(xv) 52.222-25, Affirmative Action Compliance. This provision applies to solicitations, other than those for construction, when the solicitation includes the clause at 52.222-26, Equal Opportunity.

(xvi) 52.222-38, Compliance with Veterans' Employment Reporting Requirements. This provision applies to solicitations when it is anticipated the contract award will exceed the simplified acquisition threshold and the contract is not for acquisition of commercial products or commercial services.

(xvii) 52.223-1, Biobased Product Certification. This provision applies to solicitations that require the delivery or specify the use of USDA-designated items; or include the clause at 52.223-2, Affirmative Procurement of Biobased Products Under Service and Construction Contracts.

(xviii) 52.223-4, Recovered Material Certification. This provision applies to solicitations that are for, or specify the use of, EPA- designated items.

(xix) 52.223-22, Public Disclosure of Greenhouse Gas Emissions and Reduction Goals--Representation. This provision applies to solicitations that include the clause at 52.204-7.)

(xx) 52.225-2, Buy American Certificate. This provision applies to solicitations containing the clause at 52.225-1.

(xxi) 52.225-4, Buy American--Free Trade Agreements--Israeli Trade Act Certificate. (Basic, Alternates I, II, and III.) This provision applies to solicitations containing the clause at 52.225- 3.

(A) If the acquisition value is less than $25,000, the basic provision applies.

(B) If the acquisition value is $25,000 or more but is less than $50,000, the provision with its Alternate I applies.

(C) If the acquisition value is $50,000 or more but is less than $92,319, the provision with its Alternate II applies.

(D) If the acquisition value is $92,319 or more but is less than $100,000, the provision with its Alternate III applies.

(xxii) 52.225-6, Trade Agreements Certificate. This provision applies to solicitations containing the clause at 52.225-5.

(xxiii) 52.225-20, Prohibition on Conducting Restricted Business Operations in Sudan--Certification. This provision applies to all solicitations.

(xxiv) 52.225-25, Prohibition on Contracting with Entities Engaging in Certain Activities or Transactions Relating to Iran—Representation and Certification. This provision applies to all solicitations.

(xxv) 52.226-2, Historically Black College or University and Minority Institution Representation. This provision applies to solicitations for research, studies, supplies, or services of the type normally acquired from higher educational institutions.

(2) The following representations or certifications are applicable as indicated by the Contracting Officer:

[Contracting Officer check as appropriate.]

X (i) 52.204-17, Ownership or Control of Offeror.

X (ii) 52.204-20, Predecessor of Offeror.

(iii) 52.222-18, Certification Regarding Knowledge of Child Labor for Listed End Products.

(iv) 52.222-48, Exemption from Application of the Service Contract Labor Standards to Contracts for Maintenance, Calibration, or Repair of Certain Equipment--Certification.

(v) 52.222-52 Exemption from Application of the Service Contract Labor Standards to Contracts for Certain Services--Certification.

(vi) 52.223-9, with its Alternate I, Estimate of Percentage of Recovered Material Content for EPA-Designated Products (Alternate I only).

(vii) 52.227-6, Royalty Information.

(A) Basic.

(B) Alternate I.

(viii) 52.227-15, Representation of Limited Rights Data and Restricted Computer Software.

(d) The Offeror has completed the annual representations and certifications electronically in SAM accessed through https://www.sam.gov. After reviewing the SAM information, the Offeror verifies by submission of the offer that the representations and certifications currently posted electronically that apply to this solicitation as indicated in paragraph (c) of this provision have been entered or updated within the last 12 months, are current, accurate, complete, and applicable to this solicitation (including the business size standard applicable to the NAICS code referenced for this solicitation), as of the date of this offer and are incorporated in this offer by reference (see FAR 4.1201); except for the changes identified below [offeror to insert changes, identifying change by clause number, title, date]. These amended representation(s) and/or certification(s) are also incorporated in this offer and are current, accurate, and complete as of the date of this offer.

FAR Clause	Title	Date	Change

Any changes provided by the offeror are applicable to this solicitation only, and do not result in an update to the representations and certifications posted on SAM.

(End of provision)

52.204-24 REPRESENTATION REGARDING CERTAIN TELECOMMUNICATIONS AND VIDEO SURVEILLANCE SERVICES OR EQUIPMENT (NOV 2021)

The Offeror shall not complete the representation at paragraph (d)(1) of this provision if the Offeror has represented that it "does not provide covered telecommunications equipment or services as a part of its offered products or services to the Government in the performance of any contract, subcontract, or other contractual instrument" in paragraph (c)(1) in the provision at 52.204-26, Covered Telecommunications Equipment or Services--Representation, or in paragraph (v)(2)(i) of the provision at 52.212-3, Offeror Representations and Certifications-Commercial Products and Commercial Services. The Offeror shall not complete the representation in paragraph (d)(2) of this provision if the Offeror has represented that it "does not use covered telecommunications equipment or services, or any equipment, system, or service that uses covered telecommunications equipment or services" in paragraph (c)(2) of the provision at 52.204-26, or in paragraph (v)(2)(ii) of the provision at 52.212-3.

(a) Definitions. As used in this provision-

Backhaul, covered telecommunications equipment or services, critical technology, interconnection arrangements, reasonable inquiry, roaming, and substantial or essential component have the meanings provided in the clause 52.204-25, Prohibition on Contracting for Certain Telecommunications and Video Surveillance Services or Equipment.

(b) Prohibition.

(1) Section 889(a)(1)(A) of the John S. McCain National Defense Authorization Act for Fiscal Year 2019 (Pub. L. 115-232) prohibits the head of an executive agency on or after August 13, 2019, from procuring or obtaining, or extending or renewing a contract to procure or obtain, any equipment, system, or service that uses covered telecommunications equipment or services as a substantial or essential component of any system, or as critical technology as part of any system. Nothing in the prohibition shall be construed to--

(i) Prohibit the head of an executive agency from procuring with an entity to provide a service that connects to the facilities of a third-party, such as backhaul, roaming, or interconnection arrangements; or

(ii) Cover telecommunications equipment that cannot route or redirect user data traffic or cannot permit visibility into any user data or packets that such equipment transmits or otherwise handles.

(2) Section 889(a)(1)(B) of the John S. McCain National Defense Authorization Act for Fiscal Year 2019 (Pub. L. 115-232) prohibits the head of an executive agency on or after August 13, 2020, from entering into a contract or extending or renewing a contract with an entity that uses any equipment, system, or service that uses covered telecommunications equipment or services as a substantial or essential component of any system, or as critical technology as part of any system. This prohibition applies to the use of covered telecommunications equipment or services, regardless of whether that use is in performance of work under a Federal contract. Nothing in the prohibition shall be construed to--

(i) Prohibit the head of an executive agency from procuring with an entity to provide a service that connects to the facilities of a third-party, such as backhaul, roaming, or interconnection arrangements; or

(ii) Cover telecommunications equipment that cannot route or redirect user data traffic or cannot permit visibility into any user data or packets that such equipment transmits or otherwise handles.

(c) Procedures. The Offeror shall review the list of excluded parties in the System for Award Management (SAM) (https://www.sam.gov) for entities excluded from receiving federal awards for "covered telecommunications equipment or services."

(d) Representations. The Offeror represents that--

(1) It [___] will, [___] will not provide covered telecommunications equipment or services to the Government in the performance of any contract, subcontract or other contractual instrument resulting from this solicitation. The Offeror shall provide the additional disclosure information required at paragraph (e)(1) of this section if the Offeror responds "will" in paragraph (d)(1) of this section; and

(2) After conducting a reasonable inquiry, for purposes of this representation, the Offeror represents that--

It [___] does, [___] does not use covered telecommunications equipment or services, or use any equipment, system, or service that uses covered telecommunications equipment or services. The Offeror shall provide the additional disclosure information required at paragraph (e)(2) of this section if the Offeror responds "does" in paragraph (d)(2) of this section.

(e) Disclosures.

(1) Disclosure for the representation in paragraph (d)(1) of this provision. If the Offeror has responded "will" in the representation in paragraph (d)(1) of this provision, the Offeror shall provide the following information as part of the offer:

(i) For covered equipment--

(A) The entity that produced the covered telecommunications equipment (include entity name, unique entity identifier, CAGE code, and whether the entity was the original equipment manufacturer (OEM) or a distributor, if known);

(B) A description of all covered telecommunications equipment offered (include brand; model number, such as OEM number, manufacturer part number, or wholesaler number; and item description, as applicable); and

(C) Explanation of the proposed use of covered telecommunications equipment and any factors relevant to determining if such use would be permissible under the prohibition in paragraph (b)(1) of this provision.

(ii) For covered services--

(A) If the service is related to item maintenance: A description of all covered telecommunications services offered (include on the item being maintained: Brand; model number, such as OEM number, manufacturer part number, or wholesaler number; and item description, as applicable); or

(B) If not associated with maintenance, the Product Service Code (PSC) of the service being provided; and explanation of the proposed use of covered telecommunications services and any factors relevant to determining if such use would be permissible under the prohibition in paragraph (b)(1) of this provision.

(2) Disclosure for the representation in paragraph (d)(2) of this provision. If the Offeror has responded "does" in the representation in paragraph (d)(2) of this provision, the Offeror shall provide the following information as part of the offer:

(i) For covered equipment--

(A) The entity that produced the covered telecommunications equipment (include entity name, unique entity identifier, CAGE code, and whether the entity was the OEM or a distributor, if known);

(B) A description of all covered telecommunications equipment offered (include brand; model number, such as OEM number, manufacturer part number, or wholesaler number; and item description, as applicable); and

(C) Explanation of the proposed use of covered telecommunications equipment and any factors relevant to determining if such use would be permissible under the prohibition in paragraph (b)(2) of this provision.

(ii) For covered services--

(A) If the service is related to item maintenance: A description of all covered telecommunications services offered (include on the item being maintained: Brand; model number, such as OEM number, manufacturer part number, or wholesaler number; and item description, as applicable); or

(B) If not associated with maintenance, the PSC of the service being provided; and explanation of the proposed use of covered telecommunications services and any factors relevant to determining if such use would be permissible under the prohibition in paragraph (b)(2) of this provision.

(End of provision)

52.209-13 VIOLATION OF ARMS CONTROL TREATIES OR AGREEMENTS--CERTIFICATION (NOV 2021)

(a) This provision does not apply to acquisitions at or below the simplified acquisition threshold or to acquisitions of commercial products and commercial services as defined in Federal Acquisition Regulation 2.101.

(b) Certification. [Offeror shall check either (1) or (2).]

____ (1) The Offeror certifies that--

(i) It does not engage and has not engaged in any activity that contributed to or was a significant factor in the President's or Secretary of State's determination that a foreign country is in violation of its obligations undertaken in any arms control, nonproliferation, or disarmament agreement to which the United States is a party, or is not adhering to its arms control, nonproliferation, or disarmament commitments in which the United States is a participating state. The determinations are described in the most recent unclassified annual report provided to Congress pursuant to section 403 of the Arms Control and Disarmament Act (22 U.S.C. 2593a). The report is available at https://www.state.gov/bureaus-offices/under-secretary-for-arms-control-and-international-security-affairs/bureau-of-arms-control-verification-and-compliance/; and

(ii) No entity owned or controlled by the Offeror has engaged in any activity that contributed to or was a significant factor in the President's or Secretary of State's determination that a foreign country is in violation of its obligations undertaken in any arms control, nonproliferation, or disarmament agreement to which the United States is a party, or is not adhering to its arms control, nonproliferation, or disarmament commitments in which the United States is a participating state. The determinations are described in the most recent unclassified annual report provided to Congress pursuant to section 403 of the Arms Control and Disarmament Act (22 U.S.C. 2593a). The report is available at https://www.state.gov/bureaus-offices/under-secretary-for-arms-control-and-international-security-affairs/bureau-of-arms-control-verification-and-compliance/; or

____ (2) The Offeror is providing separate information with its offer in accordance with paragraph (d)(2) of this provision.

(c) Procedures for reviewing the annual unclassified report (see paragraph (b)(1) of this provision). For clarity, references to the report in this section refer to the entirety of the annual unclassified report, including any separate reports that are incorporated by reference into the annual unclassified report.

(1) Check the table of contents of the annual unclassified report and the country section headings of the reports incorporated by reference to identify the foreign countries listed there. Determine whether the Offeror or any person owned or controlled by the Offeror may have engaged in any activity related to one or more of such foreign countries.

(2) If there may have been such activity, review all findings in the report associated with those foreign countries to determine whether or not each such foreign country was determined to be in violation of its obligations undertaken in an arms control, nonproliferation, or disarmament agreement to which the United States is a party, or to be not adhering to its arms control, nonproliferation, or disarmament commitments in which the United States is a participating state. For clarity, in the annual report an explicit certification of non-compliance is equivalent to a determination of violation. However, the following statements in the annual report are not equivalent to a determination of violation:

(i) An inability to certify compliance.

(ii) An inability to conclude compliance.

(iii) A statement about compliance concerns.

(3) If so, determine whether the Offeror or any person owned or controlled by the Offeror has engaged in any activity that contributed to or is a significant factor in the determination in the report that one or more of these foreign countries is in violation of its obligations undertaken in an arms control, nonproliferation, or disarmament agreement to which the United States is a party, or is not adhering to its arms control, nonproliferation, or disarmament commitments in which the United States is a participating state. Review the narrative for any such findings reflecting a determination of violation or non-adherence related to those foreign countries in the report, including the finding itself, and to the extent necessary, the conduct giving rise to the compliance or adherence concerns, the analysis of compliance or adherence concerns, and efforts to resolve compliance or adherence concerns.

(4) The Offeror may submit any questions with regard to this report by email to NDAA1290Cert@state.gov. To the extent feasible, the Department of State will respond to such email inquiries within 3 business days.

(d) Do not submit an offer unless--

(1) A certification is provided in paragraph (b)(1) of this provision and submitted with the offer; or

(2) In accordance with paragraph (b)(2) of this provision, the Offeror provides with its offer information that the President of the United States has--

(i) Waived application under U.S.C. 2593e(d) or (e); or

(ii) Determined under 22 U.S.C. 2593e(g)(2) that the entity has ceased all activities for which measures were imposed under 22 U.S.C.2593e(b).

(e) Remedies. The certification in paragraph (b)(1) of this provision is a material representation of fact upon which reliance was placed when making award. If it is later determined that the Offeror knowingly submitted a false certification, in addition to other remedies available to the Government, such as suspension or debarment, the Contracting Officer may terminate any contract resulting from the false certification.

(End of provision)

252.204-7007 ALTERNATE A, ANNUAL REPRESENTATIONS AND CERTIFICATIONS (MAY 2021)

Substitute the following paragraphs (b), (d) and (e) for paragraphs (b) and (d) of the provision at FAR 52.204-8:

(b)(1) If the provision at FAR 52.204-7, System for Award Management, is included in this solicitation, paragraph (e) of this provision applies.

(2) If the provision at FAR 52.204-7, System for Award Management, is not included in this solicitation, and the Offeror has an active registration in the System for Award Management (SAM), the Offeror may choose to use paragraph (e) of this provision instead of completing the corresponding individual representations and certifications in the solicitation. The Offeror shall indicate which option applies by checking one of the following boxes:

__ (i) Paragraph (e) applies.

__ (ii) Paragraph (e) does not apply and the Offeror has completed the individual representations and certifications in the solicitation.

(d)(1) The following representations or certifications in the SAM database are applicable to this solicitation as indicated:

(i) 252.204-7016, Covered Defense Telecommunications Equipment or Services--Representation. Applies to all solicitations.

(ii) 252.216-7008, Economic Price Adjustment--Wage Rates or Material Prices Controlled by a Foreign Government. Applies to solicitations for fixed-price supply and service contracts when the contract is to be performed wholly or in part in a foreign country, and a foreign government controls wage rates or material prices and may during contract performance impose a mandatory change in wages or prices of materials.

(iii) 252.225-7042, Authorization to Perform. Applies to all solicitations when performance will be wholly or in part in a foreign country.

(iv) 252.225-7049, Prohibition on Acquisition of Certain Foreign Commercial Satellite Services--Representations. Applies to solicitations for the acquisition of commercial satellite services.

(v) 252.225-7050, Disclosure of Ownership or Control by the Government of a Country that is a State Sponsor of Terrorism. Applies to all solicitations expected to result in contracts of $150,000 or more.

(vi) 252.229-7012, Tax Exemptions (Italy)--Representation. Applies to solicitations when contract performance will be in Italy.

(vii) 252.229-7013, Tax Exemptions (Spain)--Representation. Applies to solicitations when contract performance will be in Spain.

(viii) 252.247-7022, Representation of Extent of Transportation by Sea. Applies to all solicitations except those for direct purchase of ocean transportation services or those with an anticipated value at or below the simplified acquisition threshold.

(2) The following representations or certifications in SAM are applicable to this solicitation as indicated by the Contracting Officer:

____ (i) 252.209-7002, Disclosure of Ownership or Control by a Foreign Government.

____ (ii) 252.225-7000, Buy American--Balance of Payments Program Certificate.

____ (iii) 252.225-7020, Trade Agreements Certificate.

____ Use with Alternate I.

X (iv) 252.225-7031, Secondary Arab Boycott of Israel.

____ (v) 252.225-7035, Buy American--Free Trade Agreements--Balance of Payments Program Certificate.

____ Use with Alternate I.

____ Use with Alternate II.

____ Use with Alternate III.

____ Use with Alternate IV.

____ Use with Alternate V.

____ (vi) 252.226-7002, Representation for Demonstration Project for Contractors Employing Persons with Disabilities.

____ (vii) 252.232-7015, Performance-Based Payments--Representation.

(e) The Offeror has completed the annual representations and certifications electronically via the SAM website at https://www.acquisition.gov/. After reviewing the SAM database information, the Offeror verifies by submission of the offer that the representations and certifications currently posted electronically that apply to this solicitation as indicated in FAR 52.204-8(c) and paragraph (d) of this provision have been entered or updated within the last 12 months, are current, accurate, complete, and applicable to this solicitation (including the business size standard applicable to the NAICS code referenced for this solicitation), as of the date of this offer, and are incorporated in

this offer by reference (see FAR 4.1201); except for the changes identified below [Offeror to insert changes, identifying change by provision number, title, date_____]. These amended representation(s) and/or certification(s) are also incorporated in this offer and are current, accurate, and complete as of the date of this offer.

FAR/DFARS provision No.	Title	Date	Change

Any changes provided by the Offeror are applicable to this solicitation only, and do not result in an update to the representations and certifications located in the SAM database.

(End of provision)

252.204-7016 COVERED DEFENSE TELECOMMUNICATIONS EQUIPMENT OR SERVICES -- REPRESENTATION (DEC 2019)

(a) Definitions. As used in this provision, covered defense telecommunications equipment or services has the meaning provided in the clause 252.204-7018, Prohibition on the Acquisition of Covered Defense Telecommunications Equipment or Services.

(b) Procedures. The Offeror shall review the list of excluded parties in the System for Award Management (SAM) (https://www.sam.gov) for entities excluded from receiving federal awards for “covered defense telecommunications equipment or services”.

(c) Representation. The Offeror represents that it [ ] does, [ ] does not provide covered defense telecommunications equipment or services as a part of its offered products or services to the Government in the performance of any contract, subcontract, or other contractual instrument.

(End of provision)

252.204-7017 PROHIBITION ON THE ACQUISITION OF COVERED DEFENSE TELECOMMUNICATIONS EQUIPMENT OR SERVICES--REPRESENTATION (MAY 2021)

The Offeror is not required to complete the representation in this provision if the Offeror has represented in the provision at 252.204-7016, Covered Defense Telecommunications Equipment or Services--Representation, that it “does not provide covered defense telecommunications equipment or services as a part of its offered products or services to the Government in the performance of any contract, subcontract, or other contractual instrument.”

(a) Definitions. Covered defense telecommunications equipment or services, covered mission, critical technology, and substantial or essential component, as used in this provision, have the meanings given in the 252.204-7018 clause, Prohibition on the Acquisition of Covered Defense Telecommunications Equipment or Services, of this solicitation.

(b) Prohibition. Section 1656 of the National Defense Authorization Act for Fiscal Year 2018 (Pub. L. 115-91) prohibits agencies from procuring or obtaining, or extending or renewing a contract to procure or obtain, any

equipment, system, or service to carry out covered missions that uses covered defense telecommunications equipment or services as a substantial or essential component of any system, or as critical technology as part of any system.

(c) Procedures. The Offeror shall review the list of excluded parties in the System for Award Management (SAM) at https://www.sam.gov for entities that are excluded when providing any equipment, system, or service to carry out covered missions that uses covered defense telecommunications equipment or services as a substantial or essential component of any system, or as critical technology as part of any system, unless a waiver is granted.

(d) Representation. If in its annual representations and certifications in SAM the Offeror has represented in paragraph (c) of the provision at 252.204-7016, Covered Defense Telecommunications Equipment or Services--Representation, that it "does" provide covered defense telecommunications equipment or services as a part of its offered products or services to the Government in the performance of any contract, subcontract, or other contractual instrument, then the Offeror shall complete the following additional representation:

The Offeror represents that it [ ] will [ ] will not provide covered defense telecommunications equipment or services as a part of its offered products or services to DoD in the performance of any award resulting from this solicitation.

(e) Disclosures. If the Offeror has represented in paragraph (d) of this provision that it "will provide covered defense telecommunications equipment or services," the Offeror shall provide the following information as part of the offer:

(1) A description of all covered defense telecommunications equipment and services offered (include brand or manufacturer; product, such as model number, original equipment manufacturer (OEM) number, manufacturer part number, or wholesaler number; and item description, as applicable).

(2) An explanation of the proposed use of covered defense telecommunications equipment and services and any factors relevant to determining if such use would be permissible under the prohibition referenced in paragraph (b) of this provision.

(3) For services, the entity providing the covered defense telecommunications services (include entity name, unique entity identifier, and Commercial and Government Entity (CAGE) code, if known).

(4) For equipment, the entity that produced or provided the covered defense telecommunications equipment (include entity name, unique entity identifier, CAGE code, and whether the entity was the OEM or a distributor, if known).

(End of provision)

252.225-7055 REPRESENTATION REGARDING BUSINESS OPERATIONS WITH THE MADURO REGIME (MAY 2022)

(a) Definitions. As used in this provision--

Agency or instrumentality of the government of Venezuela, business operations, government of Venezuela, and person have the meaning given in the clause 252.225-7056, Prohibition Regarding Business Operations with the Maduro Regime, of this solicitation.

(b) Prohibition. In accordance with section 890 of the National Defense Authorization Act for Fiscal Year 2020 (Pub. L. 116-92), DoD is prohibited from entering into a contract for the procurement of products or services with any person that has business operations with an authority of the government of Venezuela that is not recognized as the legitimate government of Venezuela by the U.S. Government, unless the person has a valid license to operate in Venezuela issued by the Office of Foreign Assets Control of the Department of the Treasury.

(c) Representation. By submission of its offer, the Offeror represents that the Offeror is a person that--

(1) Does not have any business operations with an authority of the Maduro regime or the government of Venezuela that is not recognized as the legitimate government of Venezuela by the U.S. Government; or

(2) Has a valid license to operate in Venezuela issued by the Office of Foreign Assets Control of the Department of the Treasury.

(End of provision)

252.225-7973 PROHIBITION ON THE PROCUREMENT OF FOREIGN-MADE UNMANNED AIRCRAFT SYSTEMS - REPRESENTATION (MAY 2020) (DEVIATION 2020-O0015)

(a) *Prohibition*. Section 848 of the National Defense Authorization Act for Fiscal Year 2020 (Pub. L. 116-92) prohibits DoD from using or procuring -

(1) An unmanned aircraft system (UAS), or any related services or equipment, that -

(i) Is manufactured in the People's Republic of China or by an entity domiciled in the People's Republic of China;

(ii) Uses flight controllers, radios, data transmission devices, cameras, or gimbals manufactured in the People's Republic of China or by an entity domiciled in the People's Republic of China;

(iii) Uses a ground control system or operating software developed in the People's Republic of China or by an entity domiciled in the People's Republic of China; or

(iv) Uses network connectivity or data storage located in, or administered by an entity domiciled in, the People's Republic of China; or

(2) A system for the detection or identification of a UAS, or any related services or equipment, that is manufactured-

(i) In the People's Republic of China; or

(ii) By an entity domiciled in the People's Republic of China.

(b) *Representations*. By submission of its offer, the Offeror represents that it will not provide or use -

(1) A UAS, as described in paragraph (a)(1) of this provision, in the performance of any contract, subcontract, or other contractual instrument resulting from this solicitation; and

(2) A system for the detection or identification of a UAS, as described in paragraph (a)(2) of this provision, in the performance of any contract, subcontract, or other contractual instrument resulting from this solicitation.

(End of provision)

252.225-7974 REPRESENTATION REGARDING BUSINESS OPERATIONS WITH THE MADURO REGIME (DEVIATION 2020-O0005) (FEB 2020)

(a) Definitions. As used in this provision -
Agency or instrumentality of the government of Venezuela means an agency or instrumentality of a foreign state as defined in section 28 U.S.C. 1603(b), with each reference in such section to "a foreign state" deemed to be a reference to "Venezuela".
Business operations means engaging in commerce in any form, including acquiring, developing, maintaining, owning, selling, possessing, leasing, or operating equipment, facilities, personnel, products, services, personal property, real property, or any other apparatus of business or commerce.
Government of Venezuela means the government of any political subdivision of Venezuela, and any agency or instrumentality of the government of Venezuela.
Person means -
(1) A natural person, corporation, company, business association, partnership, society, trust, or any other nongovernmental entity, organization, or group;
(2) Any governmental entity or instrumentality of a government, including a multilateral development institution (as defined in section 1701(c)(3) of the International Financial Institutions Act (22 U.S.C. 262r(c)(3)); and
(3) Any successor, subunit, parent entity, or subsidiary of, or any entity under common ownership or control with, any entity described in paragraphs (1) or (2) of this definition.
(b) Prohibition. In accordance with section 890 of the National Defense Authorization Act for Fiscal Year 2020 (Pub. L. 116-92), contracting officers are prohibited from entering into a contract for the procurement of products or services with any person that has business operations with an authority of the government of Venezuela that is not recognized as the legitimate government of Venezuela by the United States Government, unless the person has a valid license to operate in Venezuela issued by the Office of Foreign Assets Control of the Department of the Treasury.
(c) Representation. By submission of its offer, the Offeror represents that the Offeror -
(1) Does not have any business operations with an authority of the Maduro regime or the government of Venezuela that is not recognized as the legitimate government of Venezuela by the United States Government; or
(2) Has a valid license to operate in Venezuela issued by the Office of Foreign Assets Control of the Department of the Treasury.
(End of provision)

252.232-7015 PERFORMANCE-BASED PAYMENTS--REPRESENTATION (DEC 2022)

(a) In accordance with 10 U.S.C. 3802(c), the Contractor's financial statements shall be in compliance with Generally Accepted Accounting Principles in order to receive performance-based payments.

(b) The Offeror represents that its financial statements are [ ] are not [ ] in compliance with Generally Accepted Accounting Principles.

(End of provision)

252.232-7016 NOTICE OF PROGRESS PAYMENTS OR PERFORMANCE-BASED PAYMENTS (APR 2020)

(a) The need for customary progress payments in accordance with subpart 32.5 of the Federal Acquisition Regulation (FAR) or performance-based payments in accordance with FAR subpart 32.10 will not be considered as a handicap or adverse factor in the award of the contract.

(b) This solicitation includes a FAR and Defense Federal Acquisition Regulation Supplement (DFARS) clause for performance-based payments and a FAR clause for progress payments. The resultant contract will include either performance-based payments or progress payments, not both, except as may be authorized on separate orders

subject to FAR 32.1003(c).

(1) The performance-based payments clauses will be included in the contract if--

(i) The Offeror has provided positive representation in response to DFARS 252.232-7015, Performance-Based Payments--Representation;

(ii) The Offeror proposes a performance-based payment arrangement in accordance with FAR 52.232-28, Invitation to Propose Performance-Based Payments, including proposed events and timing, event completion criteria, event values, and expected expenditure profile; and

(iii) The Offeror and the Government reach agreement on all aspects of the arrangement.

(2) If performance-based payments clauses are not included in the resultant contract, the progress payments clause included in this solicitation will be included in any resultant contract, modified or altered if necessary in accordance with FAR 52.232-16 and its Alternate I. Even though the progress payments clause is included in the contract, the clause shall be inoperative during any time the contractor's accounting system and controls are determined by the Government to be inadequate for segregation and accumulation of contract costs.

(End of provision)

Section 00 50 00 - Contracting Forms and Supplements

WAGE DETERMINATION BLDG

"General Decision Number: NM20230044 03/31/2023

Superseded General Decision Number: NM20220044

State: New Mexico

Construction Type: Building
BUILDING CONSTRUCTION PROJECTS (does not include single family homes or apartments up to and including 4 stories).

County: Bernalillo County in New Mexico.

BUILDING CONSTRUCTION PROJECTS (does not include single family homes or apartments up to and including 4 stories).

Note: Contracts subject to the Davis-Bacon Act are generally required to pay at least the applicable minimum wage rate required under Executive Order 14026 or Executive Order 13658. Please note that these Executive Orders apply to covered contracts entered into by the federal government that are subject to the Davis-Bacon Act itself, but do not apply to contracts subject only to the Davis-Bacon Related Acts, including those set forth at 29 CFR 5.1(a)(2)-(60).

If the contract is entered into on or after January 30, 2022, or the contract is renewed or extended (e.g., an option is exercised) on or after January 30, 2022:	. Executive Order 14026 generally applies to the contract. . The contractor must pay all covered workers at least $16.20 per hour (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on the contract in 2023.
If the contract was awarded on or between January 1, 2015 and January 29, 2022, and the contract is not renewed or extended on or after January 30, 2022:	. Executive Order 13658 generally applies to the contract. . The contractor must pay all covered workers at least $12.15 per hour (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on that contract in 2023.

The applicable Executive Order minimum wage rate will be adjusted annually. If this contract is covered by one of the Executive Orders and a classification considered necessary for performance of work on the contract does not appear on this wage determination, the contractor must still submit a conformance request.

Additional information on contractor requirements and worker protections under the Executive Orders is available at http://www.dol.gov/whd/govcontracts.

WELDERS - Receive rate prescribed for craft performing operation to which welding is incidental.

==========

** Workers in this classification may be entitled to a higher minimum wage under Executive Order 14026 ($16.20) or 13658 ($12.15). Please see the Note at the top of the wage determination for more information.

Note: Executive Order (EO) 13706, Establishing Paid Sick Leave for Federal Contractors applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2017. If this contract is covered by the EO, the contractor must provide employees with 1 hour of paid sick leave for every 30 hours they work, up to 56 hours of paid sick leave each year. Employees must be permitted to use paid sick leave for their own illness, injury or other health-related needs, including preventive care; to assist a family member (or person who is like family to the employee) who is ill, injured, or has other health-related needs, including preventive care; or for reasons resulting from, or to assist a family member (or person who is like family to the employee) who is a victim of, domestic violence, sexual assault, or stalking. Additional information on contractor requirements and worker protections under the EO is available at https://www.dol.gov/agencies/whd/government-contracts.

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (ii)).

The body of each wage determination lists the classification and wage rates that have been found to be prevailing for the cited type(s) of construction in the area covered by the wage determination. The classifications are listed in alphabetical order of ""identifiers"" that indicate whether the particular rate is a union rate (current union negotiated rate for local), a survey rate (weighted average rate) or a union average rate (weighted union average rate).

Union Rate Identifiers

A four letter classification abbreviation identifier enclosed in dotted lines beginning with characters other than ""SU"" or ""UAVG"" denotes that the union classification and rate were prevailing for that classification in the survey. Example: PLUM0198-005 07/01/2014. PLUM is an abbreviation identifier of the union which prevailed in the survey for this classification, which in this example would be Plumbers. 0198 indicates the local union number or district council number where applicable, i.e., Plumbers Local 0198. The next number, 005 in the example, is an internal number used in processing the wage determination. 07/01/2014 is the effective date of the most current negotiated rate, which in this example is July 1, 2014.

Union prevailing wage rates are updated to reflect all rate changes in the collective bargaining agreement (CBA) governing this classification and rate.

Survey Rate Identifiers

Classifications listed under the ""SU"" identifier indicate that no one rate prevailed for this classification in the survey and the published rate is derived by computing a weighted average rate based on all the rates reported in the survey for that classification. As this weighted average rate includes all rates reported in the survey, it may include both union and non-union rates. Example: SULA2012-007 5/13/2014. SU indicates the rates are survey rates based on a weighted average calculation of rates and are not majority rates. LA indicates the State of Louisiana. 2012 is the year of survey on which these classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. 5/13/2014 indicates the survey completion date for the classifications and rates under that identifier.

Survey wage rates are not updated and remain in effect until a new survey is conducted.

Union Average Rate Identifiers

Classification(s) listed under the UAVG identifier indicate that no single majority rate prevailed for those classifications; however, 100% of the data reported for the classifications was union data. EXAMPLE: UAVG-OH-0010 08/29/2014. UAVG indicates that the rate is a weighted union average rate. OH indicates the state. The next number, 0010 in the example, is an internal number used in producing the wage determination. 08/29/2014 indicates the survey completion date for the classifications and rates under that identifier.

A UAVG rate will be updated once a year, usually in January of each year, to reflect a weighted average of the current negotiated/CBA rate of the union locals from which the rate is based.

WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

* an existing published wage determination
* a survey underlying a wage determination
* a Wage and Hour Division letter setting forth a position on a wage determination matter
* a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour National Office because National Office has responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.

CLAUSES INCORPORATED BY FULL TEXT

52.203-19 PROHIBITION ON REQUIRING CERTAIN INTERNAL CONFIDENTIALITY AGREEMENTS OR STATEMENTS (JAN 2017)

(a) Definitions. As used in this clause--

Internal confidentiality agreement or statement means a confidentiality agreement or any other written statement that the contractor requires any of its employees or subcontractors to sign regarding nondisclosure of contractor information, except that it does not include confidentiality agreements arising out of civil litigation or confidentiality agreements that contractor employees or subcontractors sign at the behest of a Federal agency.

Subcontract means any contract as defined in subpart 2.1 entered into by a subcontractor to furnish supplies or services for performance of a prime contract or a subcontract. It includes but is not limited to purchase orders, and changes and modifications to purchase orders.

Subcontractor means any supplier, distributor, vendor, or firm (including a consultant) that furnishes supplies or services to or for a prime contractor or another subcontractor.

(b) The Contractor shall not require its employees or subcontractors to sign or comply with internal confidentiality agreements or statements prohibiting or otherwise restricting such employees or subcontractors from lawfully reporting waste, fraud, or abuse related to the performance of a Government contract to a designated investigative or law enforcement representative of a Federal department or agency authorized to receive such information (e.g., agency Office of the Inspector General).
(c) The Contractor shall notify current employees and subcontractors that prohibitions and restrictions of any preexisting internal confidentiality agreements or statements covered by this clause, to the extent that such prohibitions and restrictions are inconsistent with the prohibitions of this clause, are no longer in effect.
(d) The prohibition in paragraph (b) of this clause does not contravene requirements applicable to Standard Form 312 (Classified Information Nondisclosure Agreement), Form 4414 (Sensitive Compartmented Information Nondisclosure Agreement), or any other form issued by a Federal department or agency governing the nondisclosure of classified information.
(e) In accordance with section 743 of Division E, Title VII, of the Consolidated and Further Continuing Appropriations Act, 2015, (Pub. L. 113-235), and its successor provisions in subsequent appropriations acts (and as extended in continuing resolutions) use of funds appropriated (or otherwise made available) is prohibited, if the Government determines that the Contractor is not in compliance with the provisions of this clause.
(f) The Contractor shall include the substance of this clause, including this paragraph (f), in subcontracts under such contracts.

(End of clause)

52.211-10 COMMENCEMENT, PROSECUTION, AND COMPLETION OF WORK (APR 1984)

The Contractor shall be required to (a) commence work under this contract within 10 calendar days after the date the Contractor receives the notice to proceed, (b) prosecute the work diligently, and (c) complete the entire work ready for use not later than 570 days (645 days is bid option 1 is exercised). The time stated for completion shall include final cleanup of the premises.

SCHEDULE

Item of Work	Commencement Time in Calendar Days After Receipt of Notice to Proceed	Completion Time in Calendar Days After Receipt of Notice to Proceed
BASE BID		
(1) VA NRM Repair-Replace Elevators in B-41	10	570
BID OPTION NO. 1		
(2) Provide New Car enclosure for Service Elevators S-2 and S-3, see Section 01 01 01 for information)		If this bid option is exercised, an additional 75 calendar days will be added to the total Completion Time which includes the base bid and exercised bid options.

1. If Bid Option No. 1 is exercised, the Base Bid Completion Time will be increased an additional 75 calendar days for a total Completion Time of 645 calendar days.

2. Total Completion Time is defined as the Completion Time in calendar days stated for the base bid plus the additional calendar days for completion associated with any exercised bid option(s). The total completion time is the time specified in the contract to complete the work.

(End of clause)

52.211-12 LIQUIDATED DAMAGES--CONSTRUCTION (SEP 2000)

(a) If the Contractor fails to complete the work within the time specified in the contract, the Contractor shall pay liquidated damages to the Government in the amount listed in the table under FAR 52.211-10: Commencement, Prosecution, and Completion of Work for each calendar day of delay until the work is completed or accepted.

(b) If the Government terminates the Contractor's right to proceed, liquidated damages will continue to accrue until the work is completed. These liquidated damages are in addition to excess costs of repurchase under the Termination clause.

(End of clause)

52.217-7 OPTION FOR INCREASED QUANTITY--SEPARATELY PRICED LINE ITEM (MAR 1989)

The Government may require the delivery of the numbered line item, identified in the Schedule as an option item, in the quantity and at the price stated in the Schedule. The Contracting Officer may exercise the option by written notice to the Contractor within the performance period listed for the base tasks. Delivery of added items shall continue at the same rate that like items are called for under the contract, unless the parties otherwise agree.

(End of clause)

52.219-28 POST-AWARD SMALL BUSINESS PROGRAM REREPRESENTATION (OCT 2022)

(a) Definitions. As used in this clause--

Long-term contract means a contract of more than five years in duration, including options. However, the term does not include contracts that exceed five years in duration because the period of performance has been extended for a cumulative period not to exceed six months under the clause at 52.217-8, Option to Extend Services, or other appropriate authority.

Small business concern--

(1) Means a concern, including its affiliates, that is independently owned and operated, not dominant in its field of operation, and qualified as a small business under the criteria in 13 CFR part 121 and the size standard in paragraph (d) of this clause.

(2) Affiliates, as used in this definition, means business concerns, one of whom directly or indirectly controls or has the power to control the others, or a third party or parties control or have the power to control the others. In determining whether affiliation exists, consideration is given to all appropriate factors including common ownership, common management, and contractual relationships. SBA determines affiliation based on the factors set forth at 13 CFR 121.103.

(b) If the Contractor represented that it was any of the small business concerns identified in 19.000(a)(3) prior to award of this contract, the Contractor shall rerepresent its size and socioeconomic status according to paragraph (f) of this clause or, if applicable, paragraph (h) of this clause, upon occurrence of any of the following:

(1) Within 30 days after execution of a novation agreement or within 30 days after modification of the contract to include this clause, if the novation agreement was executed prior to inclusion of this clause in the contract.

(2) Within 30 days after a merger or acquisition that does not require a novation or within 30 days after modification of the contract to include this clause, if the merger or acquisition occurred prior to inclusion of this clause in the contract.

(3) For long-term contracts--

(i) Within 60 to 120 days prior to the end of the fifth year of the contract; and

(ii) Within 60 to 120 days prior to the date specified in the contract for exercising any option thereafter.

(c) If the Contractor represented that it was any of the small business concerns identified in 19.000(a)(3) prior to award of this contract, the Contractor shall rerepresent its size and socioeconomic status according to paragraph (f) of this clause or, if applicable, paragraph (h) of this clause, when the Contracting Officer explicitly requires it for an order issued under a multiple-award contract.

(d) The Contractor shall rerepresent its size status in accordance with the size standard in effect at the time of this rerepresentation that corresponds to the North American Industry Classification System (NAICS) code(s) assigned to this contract. The small business size standard corresponding to this NAICS code(s) can be found at https://www.sba.gov/document/support--table-size-standards.

(e) The small business size standard for a Contractor providing an end item that it does not manufacture, process, or produce itself, for a contract other than a construction or service contract, is 500 employees if the acquisition--

(1) Was set aside for small business and has a value above the simplified acquisition threshold;

(2) Used the HUBZone price evaluation preference regardless of dollar value, unless the Contractor waived the price evaluation preference; or

(3) Was an 8(a), HUBZone, service-disabled veteran-owned, economically disadvantaged women-owned, or women-owned small business set-aside or sole-source award regardless of dollar value.

(f) Except as provided in paragraph (h) of this clause, the Contractor shall make the representation(s) required by paragraph (b) and (c) of this clause by validating or updating all its representations in the Representations and Certifications section of the System for Award Management (SAM) and its other data in SAM, as necessary, to ensure that they reflect the Contractor's current status. The Contractor shall notify the contracting office in writing within the timeframes specified in paragraph (b) of this clause, or with its offer for an order (see paragraph (c) of this clause), that the data have been validated or updated, and provide the date of the validation or update.

(g) If the Contractor represented that it was other than a small business concern prior to award of this contract, the Contractor may, but is not required to, take the actions required by paragraphs (f) or (h) of this clause.

(h) If the Contractor does not have representations and certifications in SAM, or does not have a representation in SAM for the NAICS code applicable to this contract, the Contractor is required to complete the following rerepresentation and submit it to the contracting office, along with the contract number and the date on which the rerepresentation was completed:

(1) The Contractor represents that it [ ] is, [ ] is not a small business concern under NAICS Code 238290 assigned to contract number TBD.

(2) [Complete only if the Contractor represented itself as a small business concern in paragraph (h)(1) of this clause.] The Contractor represents that it [ ] is, [ ] is not, a small disadvantaged business concern as defined in 13 CFR 124.1002.

(3) [Complete only if the Contractor represented itself as a small business concern in paragraph (h)(1) of this clause.] The Contractor represents that it [ ] is, [ ] is not a women-owned small business concern.

(4) Women-owned small business (WOSB) joint venture eligible under the WOSB Program. The Contractor represents that it [ ] is, [ ] is not a joint venture that complies with the requirements of 13 CFR 127.506(a) through (c). [The Contractor shall enter the name and unique entity identifier of each party to the joint venture: .]

(5) Economically disadvantaged women-owned small business (EDWOSB) joint venture. The Contractor represents that it [ ] is, [ ] is not a joint venture that complies with the requirements of 13 CFR 127.506(a) through (c). [The Contractor shall enter the name and unique entity identifier of each party to the joint venture: .]

(6) [Complete only if the Contractor represented itself as a small business concern in paragraph (h)(1) of this clause.] The Contractor represents that it [ ] is, [ ] is not a veteran-owned small business concern.

(7) [Complete only if the Contractor represented itself as a veteran-owned small business concern in paragraph (h)(6) of this clause.] The Contractor represents that it [ ] is, [ ] is not a service-disabled veteran-owned small business concern.

(8) [Complete only if the Contractor represented itself as a small business concern in paragraph (h)(1) of this clause.] The Contractor represents that--

(i) It [ ] is, [ ] is not a HUBZone small business concern listed, on the date of this representation, on the List of Qualified HUBZone Small Business Concerns maintained by the Small Business Administration, and no material changes in ownership and control, principal office, or HUBZone employee percentage have occurred since it was certified in accordance with 13 CFR part 126; and

(ii) It [ ] is, [ ] is not a HUBZone joint venture that complies with the requirements of 13 CFR part 126, and the representation in paragraph (h)(8)(i) of this clause is accurate for each HUBZone small business concern participating in the HUBZone joint venture. [The Contractor shall enter the names of each of the HUBZone small business concerns participating in the HUBZone joint venture: .] Each HUBZone small business concern participating in the HUBZone joint venture shall submit a separate signed copy of the HUBZone representation.

[Contractor to sign and date and insert authorized signer's name and title.]

(End of clause)

52.222-35 EQUAL OPPORTUNITY FOR VETERANS (JUN 2020)

(a) Definitions. As used in this clause--

"Active duty wartime or campaign badge veteran," "Armed Forces service medal veteran," "disabled veteran," "protected veteran," "qualified disabled veteran," and "recently separated veteran" have the meanings given at Federal Acquisition Regulation (FAR) 22.1301.

(b) Equal opportunity clause. The Contractor shall abide by the requirements of the equal opportunity clause at 41 CFR 60-300.5(a), as of March 24, 2014. This clause prohibits discrimination against qualified protected veterans, and requires affirmative action by the Contractor to employ and advance in employment qualified protected veterans.

(c) Subcontracts. The Contractor shall insert the terms of this clause in subcontracts valued at or above the threshold specified in FAR 22.1303(a) on the date of subcontract award, unless exempted by rules, regulations, or orders of the Secretary of Labor. The Contractor shall act as specified by the Director, Office of Federal Contract Compliance Programs, to enforce the terms, including action for noncompliance. Such necessary changes in language may be made as shall be appropriate to identify properly the parties and their undertakings.

(End of clause)

52.222-36 EQUAL OPPORTUNITY FOR WORKERS WITH DISABILITIES (JUN 2020)

(a) Equal opportunity clause. The Contractor shall abide by the requirements of the equal opportunity clause at 41 CFR 60-741.5(a), as of March 24, 2014. This clause prohibits discrimination against qualified individuals on the basis of disability, and requires affirmative action by the Contractor to employ and advance in employment qualified individuals with disabilities.

(b) Subcontracts. The Contractor shall include the terms of this clause in every subcontract or purchase order in excess of the threshold specified in Federal Acquisition Regulation (FAR) 22.1408(a) on the date of subcontract award, unless exempted by rules, regulations, or orders of the Secretary, so that such provisions will be binding upon each subcontractor or vendor. The Contractor shall act as specified by the Director, Office of Federal Contract Compliance Programs of the U.S. Department of Labor, to enforce the terms, including action for noncompliance. Such necessary changes in language may be made as shall be appropriate to identify properly the parties and their undertakings.

(End of clause)

52.222-55 MINIMUM WAGES FOR CONTRACTOR WORKERS UNDER EXECUTIVE ORDER 14026 (JAN 2022)

(a) Definitions. As used in this clause--

"United States" means the 50 states, the District of Columbia, Puerto Rico, the Northern Mariana Islands, American Samoa, Guam, the U.S. Virgin Islands, Johnston Island, Wake Island, and the outer Continental Shelf as defined in the Outer Continental Shelf Lands Act (43 U.S.C. 1331, et seq.).

"Worker"--

(1) (i) Means any person engaged in performing work on, or in connection with, a contract covered by Executive Order 14026, and --

(A) Whose wages under such contract are governed by the Fair Labor Standards Act (29 U.S.C. chapter 8), the Service Contract Labor Standards statute (41 U.S.C. chapter 67), or the Wage Rate Requirements (Construction) statute (40 U.S.C. chapter 31, subchapter IV);

(B) Other than individuals employed in a bona fide executive, administrative, or professional capacity, as those terms are defined in 29 CFR part 541;

(C) Regardless of the contractual relationship alleged to exist between the individual and the employer.

(ii) Includes workers performing on, or in connection with, the contract whose wages are calculated pursuant to special certificates issued under 29 U.S.C. 214(c).

(iii) Also includes any person working on, or in connection with, the contract and individually registered in a bona fide apprenticeship or training program registered with the Department of Labor's Employment and Training Administration, Office of Apprenticeship, or with a State Apprenticeship Agency recognized by the Office of Apprenticeship.

(2)(i) A worker performs on a contract if the worker directly performs the specific services called for by the contract; and

(ii) A worker performs in connection with a contract if the worker's work activities are necessary to the performance of a contract but are not the specific services called for by the contract.

(b) Executive Order minimum wage rate.

(1) The Contractor shall pay to workers, while performing in the United States, and performing on, or in connection with, this contract, a minimum hourly wage rate of $15.00 per hour beginning January 30, 2022.

(2) The Contractor shall adjust the minimum wage paid, if necessary, beginning January 1, 2023, and annually thereafter, to meet the applicable annual E.O. minimum wage. The Administrator of the Department of Labor's Wage and Hour Division (the Administrator) will publish annual determinations in the Federal Register no later than 90 days before the effective date of the new E.O. minimum wage rate. The Administrator will also publish the applicable E.O. minimum wage on https://www.sam.gov (or any successor Web site), and a general notice on all wage determinations issued under the Service Contract Labor Standards statute or the Wage Rate Requirements (Construction) statute, that will provide information on the E.O. minimum wage and how to obtain annual updates. The applicable published E.O. minimum wage is incorporated by reference into this contract.

(3)(i) The Contractor may request a price adjustment only after the effective date of the new annual E.O. minimum wage determination. Prices will be adjusted only for increased labor costs (including subcontractor labor costs) as a result of an increase in the annual E.O. minimum wage, and for associated labor costs (including those for subcontractors). Associated labor costs shall include increases or decreases that result from changes in social security and unemployment taxes and workers' compensation insurance, but will not otherwise include any amount for general and administrative costs, overhead, or profit.

(ii) Subcontractors may be entitled to adjustments due to the new minimum wage, pursuant to paragraph (b)(2). Contractors shall consider any subcontractor requests for such price adjustment.

(iii) The Contracting Officer will not adjust the contract price under this clause for any costs other than those identified in paragraph (b)(3)(i) of this clause, and will not provide duplicate price adjustments with any price adjustment under clauses implementing the Service Contract Labor Standards statute or the Wage Rate Requirements (Construction) statute.

(4) The Contractor warrants that the prices in this contract do not include allowance for any contingency to cover increased costs for which adjustment is provided under this clause.

(5) A pay period under this clause may not be longer than semi-monthly, but may be shorter to comply with any applicable law or other requirement under this contract establishing a shorter pay period. Workers shall be paid no later than one pay period following the end of the regular pay period in which such wages were earned or accrued.

(6) The Contractor shall pay, unconditionally to each worker, all wages due free and clear without subsequent rebate or kickback. The Contractor may make deductions that reduce a worker's wages below the E.O. minimum wage rate only if done in accordance with 29 CFR 23.230, Deductions.

(7) The Contractor shall not discharge any part of its minimum wage obligation under this clause by furnishing fringe benefits or, with respect to workers whose wages are governed by the Service Contract Labor Standards statute, the cash equivalent thereof.

(8) Nothing in this clause shall excuse the Contractor from compliance with any applicable Federal or State prevailing wage law or any applicable law or municipal ordinance or any applicable contract establishing a minimum wage higher than the E.O. 14026 minimum wage. However, wage increases under such other laws or municipal ordinances are not subject to price adjustment under this subpart.

(9) The Contractor shall pay the E.O. minimum wage rate whenever it is higher than any applicable collective bargaining agreement(s) wage rate.

(10) The Contractor shall follow the policies and procedures in 29 CFR 23.240(b) and 23.280 for treatment of workers engaged in an occupation in which they customarily and regularly receive more than $30 a month in tips.

(c)(1) This clause applies to workers as defined in paragraph (a). As provided in that definition--

(i) Workers are covered regardless of the contractual relationship alleged to exist between the contractor or subcontractor and the worker;

(ii) Workers with disabilities whose wages are calculated pursuant to special certificates issued under 29 U.S.C. 214(c) are covered; and

(iii) Workers who are registered in a bona fide apprenticeship program or training program registered with the Department of Labor's Employment and Training Administration, Office of Apprenticeship, or with a State Apprenticeship Agency recognized by the Office of Apprenticeship, are covered.

(2) This clause does not apply to--

(i) Fair Labor Standards Act (FLSA)-covered individuals performing in connection with contracts covered by the E.O., i.e. those individuals who perform duties necessary to the performance of the contract, but who are not directly engaged in performing the specific work called for by the contract, and who spend less than 20 percent of their hours worked in a particular workweek performing in connection with such contracts;

(ii) Individuals exempted from the minimum wage requirements of the FLSA under 29 U.S.C. 213(a) and 214(a) and (b), unless otherwise covered by the Service Contract Labor Standards statute, or the Wage Rate Requirements (Construction) statute. These individuals include but are not limited to--

(A) Learners, apprentices, or messengers whose wages are calculated pursuant to special certificates issued under 29 U.S.C. 214(a);

(B) Students whose wages are calculated pursuant to special certificates issued under 29 U.S.C. 214(b); and

(C) Those employed in a bona fide executive, administrative, or professional capacity (29 U.S.C. 213(a)(1) and 29 CFR part 541).

(d) Notice. The Contractor shall notify all workers performing work on, or in connection with, this contract of the applicable E.O. minimum wage rate under this clause. With respect to workers covered by the Service Contract Labor Standards statute or the Wage Rate Requirements (Construction) statute, the Contractor may meet this requirement by posting, in a prominent and accessible place at the worksite, the applicable wage determination under those statutes. With respect to workers whose wages are governed by the FLSA, the Contractor shall post notice, utilizing the poster provided by the Administrator, which can be obtained at www.dol.gov/agencies/whd/government-contracts, in a prominent and accessible place at the worksite. Contractors that customarily post notices to workers electronically may post the notice electronically provided the electronic posting is displayed prominently on any Web site that is maintained by the contractor, whether external or internal, and customarily used for notices to workers about terms and conditions of employment.

(e) Payroll Records. (1) The Contractor shall make and maintain records, for three years after completion of the work, containing the following information for each worker:

(i) Name, address, and social security number;

(ii) The worker's occupation(s) or classification(s);

(iii) The rate or rates of wages paid;

(iv) The number of daily and weekly hours worked by each worker;

(v) Any deductions made; and

(vi) Total wages paid.

(2) The Contractor shall make records pursuant to paragraph (e)(1) of this clause available for inspection and transcription by authorized representatives of the Administrator. The Contractor shall also make such records available upon request of the Contracting Officer.

(3) The Contractor shall make a copy of the contract available, as applicable, for inspection or transcription by authorized representatives of the Administrator.

(4) Failure to comply with this paragraph (e) shall be a violation of 29 CFR 23.260 and this contract. Upon direction of the Administrator or upon the Contracting Officer's own action, payment shall be withheld until such time as the noncompliance is corrected.

(5) Nothing in this clause limits or otherwise modifies the Contractor's payroll and recordkeeping obligations, if any, under the Service Contract Labor Standards statute, the Wage Rate Requirements (Construction) statute, the Fair Labor Standards Act, or any other applicable law.

(f) Access. The Contractor shall permit authorized representatives of the Administrator to conduct investigations, including interviewing workers at the worksite during normal working hours.

(g) Withholding. The Contracting Officer, upon his or her own action or upon written request of the Administrator, will withhold funds or cause funds to be withheld, from the Contractor under this or any other Federal contract with the same Contractor, sufficient to pay workers the full amount of wages required by this clause.

(h) Disputes. Department of Labor has set forth in 29 CFR 23.510, Disputes concerning contractor compliance, the procedures for resolving disputes concerning a contractor's compliance with Department of Labor regulations at 29

CFR part 23. Such disputes shall be resolved in accordance with those procedures and not the Disputes clause of this contract. These disputes include disputes between the Contractor (or any of its subcontractors) and the contracting agency, the Department of Labor, or the workers or their representatives.

(i) Antiretaliation. The Contractor shall not discharge or in any other manner discriminate against any worker because such worker has filed any complaint or instituted or caused to be instituted any proceeding under or related to compliance with the E.O. or this clause, or has testified or is about to testify in any such proceeding.

(j) Subcontractor compliance. The Contractor is responsible for subcontractor compliance with the requirements of this clause and may be held liable for unpaid wages due subcontractor workers.

(k) Subcontracts. The Contractor shall include the substance of this clause, including this paragraph (k) in all subcontracts, regardless of dollar value, that are subject to the Service Contract Labor Standards statute or the Wage Rate Requirements (Construction) statute, and are to be performed in whole or in part in the United States.

(End of clause)

52.222-62 PAID SICK LEAVE UNDER EXECUTIVE ORDER 13706 (JAN 2022)

(a) Definitions. As used in this clause (in accordance with 29 CFR 13.2)--

Child, domestic partner, and domestic violence have the meaning given in 29 CFR 13.2.

Employee--(1)(i) Means any person engaged in performing work on or in connection with a contract covered by Executive Order (E.O.) 13706; and

(A) Whose wages under such contract are governed by the Service Contract Labor Standards statute (41 U.S.C. chapter 67), the Wage Rate Requirements (Construction) statute (40 U.S.C. chapter 31, subchapter IV), or the Fair Labor Standards Act (29 U.S.C. chapter 8);

(B) Including employees who qualify for an exemption from the Fair Labor Standards Act's minimum wage and overtime provisions;

(C) Regardless of the contractual relationship alleged to exist between the individual and the employer; and

(ii) Includes any person performing work on or in connection with the contract and individually registered in a bona fide apprenticeship or training program registered with the Department of Labor's Employment and Training Administration, Office of Apprenticeship, or with a State Apprenticeship Agency recognized by the Office of Apprenticeship.

(2)(i) An employee performs "on" a contract if the employee directly performs the specific services called for by the contract; and

(ii) An employee performs "in connection with" a contract if the employee's work activities are necessary to the performance of a contract but are not the specific services called for by the contract.

Individual related by blood or affinity whose close association with the employee is the equivalent of a family relationship has the meaning given in 29 CFR 13.2.

Multiemployer plan means a plan to which more than one employer is required to contribute and which is maintained pursuant to one or more collective bargaining agreements between one or more employee

organizations and more than one employer.

Paid sick leave means compensated absence from employment that is required by E.O. 13706 and 29 CFR part 13.

Parent, sexual assault, spouse, and stalking have the meaning given in 29 CFR 13.2.

United States means the 50 States and the District of Columbia.

(b) Executive Order 13706. (1) This contract is subject to E.O. 13706 and the regulations issued by the Secretary of Labor in 29 CFR part 13 pursuant to the E.O.

(2) If this contract is not performed wholly within the United States, this clause only applies with respect to that part of the contract that is performed within the United States.

(c) Paid sick leave. The Contractor shall--

(1) Permit each employee engaged in performing work on or in connection with this contract to earn not less than 1 hour of paid sick leave for every 30 hours worked;

(2) Allow accrual and use of paid sick leave as required by E.O. 13706 and 29 CFR part 13;

(3) Comply with the accrual, use, and other requirements set forth in 29 CFR 13.5 and 13.6, which are incorporated by reference in this contract;

(4) Provide paid sick leave to all employees when due free and clear and without subsequent deduction (except as otherwise provided by 29 CFR 13.24), rebate, or kickback on any account;

(5) Provide pay and benefits for paid sick leave used no later than one pay period following the end of the regular pay period in which the paid sick leave was taken; and

(6) Be responsible for the compliance by any subcontractor with the requirements of E.O. 13706, 29 CFR part 13, and this clause.

(d) Contractors may fulfill their obligations under E.O. 13706 and 29 CFR part 13 jointly with other contractors through a multiemployer plan, or may fulfill their obligations through an individual fund, plan, or program (see 29 CFR 13.8).

(e) Withholding. The Contracting Officer will, upon his or her own action or upon written request of an authorized representative of the Department of Labor, withhold or cause to be withheld from the Contractor under this or any other Federal contract with the same Contractor, so much of the accrued payments or advances as may be considered necessary to pay employees the full amount owed to compensate for any violation of the requirements of E.O. 13706, 29 CFR part 13, or this clause, including--

(1) Any pay and/or benefits denied or lost by reason of the violation;

(2) Other actual monetary losses sustained as a direct result of the violation; and

(3) Liquidated damages.

(f) Payment suspension/contract termination/contractor debarment. (1) In the event of a failure to comply with E.O. 13706, 29 CFR part 13, or this clause, the contracting agency may, on its own action or after authorization or by direction of the Department of Labor and written notification to the Contractor take action to cause suspension of any further payment, advance, or guarantee of funds until such violations have ceased.

(2) Any failure to comply with the requirements of this clause may be grounds for termination for default or cause.

(3) A breach of the contract clause may be grounds for debarment as a contractor and subcontractor as provided in 29 CFR 13.52.

(g) The paid sick leave required by E.O. 13706, 29 CFR part 13, and this clause is in addition to the Contractor's obligations under the Service Contract Labor Standards statute and Wage Rate Requirements (Construction) statute, and the Contractor may not receive credit toward its prevailing wage or fringe benefit obligations under those Acts for any paid sick leave provided in satisfaction of the requirements of E.O. 13706 and 29 CFR part 13.

(h) Nothing in E.O. 13706 or 29 CFR part 13 shall excuse noncompliance with or supersede any applicable Federal or State law, any applicable law or municipal ordinance, or a collective bargaining agreement requiring greater paid sick leave or leave rights than those established under E.O. 13706 and 29 CFR part 13.

(i) Recordkeeping. (1) The Contractor shall make and maintain, for no less than three (3) years from the completion of the work on the contract, records containing the following information for each employee, which the Contractor shall make available upon request for inspection, copying, and transcription by authorized representatives of the Administrator of the Wage and Hour Division of the Department of Labor:

(i) Name, address, and social security number of each employee.

(ii) The employee's occupation(s) or classification(s).

(iii) The rate or rates of wages paid (including all pay and benefits provided).

(iv) The number of daily and weekly hours worked.

(v) Any deductions made.

(vi) The total wages paid (including all pay and benefits provided) each pay period.

(vii) A copy of notifications to employees of the amount of paid sick leave the employee has accrued, as required under 29 CFR 13.5(a)(2).

(viii) A copy of employees' requests to use paid sick leave, if in writing, or, if not in writing, any other records reflecting such employee requests.

(ix) Dates and amounts of paid sick leave taken by employees (unless the Contractor's paid time off policy satisfies the requirements of E.O. 13706 and 29 CFR part 13 as described in 29 CFR 13.5(f)(5), leave shall be designated in records as paid sick leave pursuant to E.O. 13706).

(x) A copy of any written responses to employees' requests to use paid sick leave, including explanations for any denials of such requests, as required under 29 CFR 13.5(d)(3).

(xi) Any records reflecting the certification and documentation the Contractor may require an employee to provide under 29 CFR 13.5(e), including copies of any certification or documentation provided by an employee.

(xii) Any other records showing any tracking of or calculations related to an employee's accrual or use of paid sick leave.

(xiii) The relevant contract.

(xiv) The regular pay and benefits provided to an employee for each use of paid sick leave.

(xv) Any financial payment made for unused paid sick leave upon a separation from employment intended, pursuant to 29 CFR 13.5(b)(5), to relieve the Contractor from the obligation to reinstate such paid sick leave as otherwise required by 29 CFR 13.5(b)(4).

(2)(i) If the Contractor wishes to distinguish between an employee's covered and noncovered work, the Contractor shall keep records or other proof reflecting such distinctions. Only if the Contractor adequately segregates the employee's time will time spent on noncovered work be excluded from hours worked counted toward the accrual of paid sick leave. Similarly, only if the Contractor adequately segregates the employee's time may the Contractor properly refuse an employee's request to use paid sick leave on the ground that the employee was scheduled to perform noncovered work during the time he or she asked to use paid sick leave.

(ii) If the Contractor estimates covered hours worked by an employee who performs work in connection with contracts covered by the E.O. pursuant to 29 CFR 13.5(a)(1)(i) or (iii), the Contractor shall keep records or other proof of the verifiable information on which such estimates are reasonably based. Only if the Contractor relies on an estimate that is reasonable and based on verifiable information will an employee's time spent in connection with noncovered work be excluded from hours worked counted toward the accrual of paid sick leave. If the Contractor estimates the amount of time an employee spends performing in connection with contracts covered by the E.O., the Contractor shall permit the employee to use his or her paid sick leave during any work time for the Contractor.

(3) In the event the Contractor is not obligated by the Service Contract Labor Standards statute, the Wage Rate Requirements (Construction) statute, or the Fair Labor Standards Act to keep records of an employee's hours worked, such as because the employee is exempt from the Fair Labor Standards Act's minimum wage and overtime requirements, and the Contractor chooses to use the assumption permitted by 29 CFR 13.5(a)(1)(iii), the Contractor is excused from the requirement in paragraph (i)(1)(iv) of this clause and 29 CFR 13.25(a)(4) to keep records of the employee's number of daily and weekly hours worked.

(4)(i) Records relating to medical histories or domestic violence, sexual assault, or stalking, created for purposes of E.O. 13706, whether of an employee or an employee's child, parent, spouse, domestic partner, or other individual related by blood or affinity whose close association with the employee is the equivalent of a family relationship, shall be maintained as confidential records in separate files/records from the usual personnel files.

(ii) If the confidentiality requirements of the Genetic Information Nondiscrimination Act of 2008 (GINA), section 503 of the Rehabilitation Act of 1973, and/or the Americans with Disabilities Act (ADA) apply to records or documents created to comply with the recordkeeping requirements in this contract clause, the records and documents shall also be maintained in compliance with the confidentiality requirements of the GINA, section 503 of the Rehabilitation Act of 1973, and/or ADA as described in 29 CFR 1635.9, 41 CFR 60-741.23(d), and 29 CFR 1630.14(c)(1), respectively.

(iii) The Contractor shall not disclose any documentation used to verify the need to use 3 or more consecutive days of paid sick leave for the purposes listed in 29 CFR 13.5(c)(1)(iv) (as described in 29 CFR 13.5(e)(1)(ii)) and shall maintain confidentiality about any domestic abuse, sexual assault, or stalking, unless the employee consents or when disclosure is required by law.

(5) The Contractor shall permit authorized representatives of the Wage and Hour Division to conduct interviews with employees at the worksite during normal working hours.

(6) Nothing in this contract clause limits or otherwise modifies the Contractor's recordkeeping obligations, if any, under the Service Contract Labor Standards statute, the Wage Rate Requirements (Construction) statute, the Fair Labor Standards Act, the Family and Medical Leave Act, E.O. 14026, their respective implementing regulations, or any other applicable law.

(j) Interference/discrimination.

(1) The Contractor shall not in any manner interfere with an employee's accrual or use of paid sick leave as required by E.O. 13706 or 29 CFR part 13. Interference includes, but is not limited to--

(i) Miscalculating the amount of paid sick leave an employee has accrued;

(ii) Denying or unreasonably delaying a response to a proper request to use paid sick leave;

(iii) Discouraging an employee from using paid sick leave;

(iv) Reducing an employee's accrued paid sick leave by more than the amount of such leave used;

(v) Transferring an employee to work on contracts not covered by the E.O. to prevent the accrual or use of paid sick leave;

(vi) Disclosing confidential information contained in certification or other documentation provided to verify the need to use paid sick leave; or

(vii) Making the use of paid sick leave contingent on the employee's finding a replacement worker or the fulfillment of the Contractor's operational needs.

(2) The Contractor shall not discharge or in any other manner discriminate against any employee for--

(i) Using, or attempting to use, paid sick leave as provided for under E.O. 13706 and 29 CFR part 13;

(ii) Filing any complaint, initiating any proceeding, or otherwise asserting any right or claim under E.O. 13706 and 29 CFR part 13;

(iii) Cooperating in any investigation or testifying in any proceeding under E.O. 13706 and 29 CFR part 13; or

(iv) Informing any other person about his or her rights under E.O. 13706 and 29 CFR part 13.

(k) Notice. The Contractor shall notify all employees performing work on or in connection with a contract covered by the E.O. of the paid sick leave requirements of E.O. 13706, 29 CFR part 13, and this clause by posting a notice provided by the Department of Labor in a prominent and accessible place at the worksite so it may be readily seen by employees. Contractors that customarily post notices to employees electronically may post the notice electronically, provided such electronic posting is displayed prominently on any Web site that is maintained by the Contractor, whether external or internal, and customarily used for notices to employees about terms and conditions of employment.

(l) Disputes concerning labor standards. Disputes related to the application of E.O. 13706 to this contract shall not be subject to the general disputes clause of the contract. Such disputes shall be resolved in accordance with the procedures of the Department of Labor set forth in 29 CFR part 13. Disputes within the meaning of this contract clause include disputes between the Contractor (or any of its subcontractors) and the contracting agency, the Department of Labor, or the employees or their representatives.

(m) Subcontracts. The Contractor shall insert the substance of this clause, including this paragraph (m), in all subcontracts, regardless of dollar value, that are subject to the Service Contract Labor Standards statute or the Wage Rate Requirements (Construction) statute, and are to be performed in whole or in part in the United States.

(End of clause)

52.223-3 HAZARDOUS MATERIAL IDENTIFICATION AND MATERIAL SAFETY DATA (FEB 2021)

(a) "Hazardous material", as used in this clause, includes any material defined as hazardous under the latest version of Federal Standard No. 313 (including revisions adopted during the term of the contract).

(b) The offeror must list any hazardous material, as defined in paragraph (a) of this clause, to be delivered under this contract. The hazardous material shall be properly identified and include any applicable identification number, such as National Stock Number or Special Item Number. This information shall also be included on the Material Safety Data Sheet submitted under this contract.

Material (if none, insert None)	Identification No.
___	___
___	___
___	___

(c) This list must be updated during performance of the contract whenever the Contractor determines that any other material to be delivered under this contract is hazardous.

(d) The apparently successful offeror agrees to submit, for each item as required prior to award, a Material Safety Data Sheet, meeting the requirements of 29 CFR 1910.1200(g) and the latest version of Federal Standard No. 313, for all hazardous material identified in paragraph (b) of this clause. Data shall be submitted in accordance with Federal Standard No. 313, whether or not the apparently successful offeror is the actual manufacturer of these items. Failure to submit the Material Safety Data Sheet prior to award may result in the apparently successful offeror being considered nonresponsible and ineligible for award.

(e) If, after award, there is a change in the composition of the item(s) or a revision to Federal Standard No. 313, which renders incomplete or inaccurate the data submitted under paragraph (d) of this clause, the Contractor shall promptly notify the Contracting Officer and resubmit the data.

(f) Neither the requirements of this clause nor any act or failure to act by the Government shall relieve the Contractor of any responsibility or liability for the safety of Government, Contractor, or subcontractor personnel or property.

(g) Nothing contained in this clause shall relieve the Contractor from complying with applicable Federal, State, and local laws, codes, ordinances, and regulations (including the obtaining of licenses and permits) in connection with hazardous material.

(h) The Government's rights in data furnished under this contract with respect to hazardous material are as follows:

(1) To use, duplicate and disclose any data to which this clause is applicable. The purposes of this right are to--

(i) Apprise personnel of the hazards to which they may be exposed in using, handling, packaging, transporting, or disposing of hazardous materials;

(ii) Obtain medical treatment for those affected by the material; and

(iii) Have others use, duplicate, and disclose the data for the Government for these purposes.

(2) To use, duplicate, and disclose data furnished under this clause, in accordance with subparagraph (h)(1) of this

clause, in precedence over any other clause of this contract providing for rights in data.

(3) The Government is not precluded from using similar or identical data acquired from other sources.

(End of clause)

52.223-9 ESTIMATE OF PERCENTAGE OF RECOVERED MATERIAL CONTENT FOR EPA-DESIGNATED ITEMS (MAY 2008)

(a) Definitions. As used in this clause--

Postconsumer material means a material or finished product that has served its intended use and has been discarded for disposal or recovery, having completed its life as a consumer item. Postconsumer material is a part of the broader category of “recovered material.”

Recovered material means waste materials and by-products recovered or diverted from solid waste, but the term does not include those materials and by-products generated from, and commonly reused within, an original manufacturing process.

(b) The Contractor, on completion of this contract, shall--

(1) Estimate the percentage of the total recovered material content for EPA-designated item(s) delivered and/or used in contract performance, including, if applicable, the percentage of post-consumer material content; and

(2) Submit this estimate to (Contracting Officer complete in accordance with agency procedures).

(End of clause)

52.225-9 BUY AMERICAN—CONSTRUCTION MATERIALS (OCT 2022)

(a) Definitions. As used in this clause--

Commercially available off-the-shelf (COTS) item—

(1) Means any item of supply (including construction material) that is--

(i) A commercial product (as defined in paragraph (1) of the definition of "commercial product" at Federal Acquisition Regulation (FAR) 2.101);

(ii) Sold in substantial quantities in the commercial marketplace; and

(iii) Offered to the Government, under a contract or subcontract at any tier, without modification, in the same form in which it is sold in the commercial marketplace; and

(2) Does not include bulk cargo, as defined in 46 U.S.C. 40102(4) such as agricultural products and petroleum products.

Component means an article, material, or supply incorporated directly into a construction material.

Construction material means an article, material, or supply brought to the construction site by the Contractor or a subcontractor for incorporation into the building or work. The term also includes an item brought to the site

preassembled from articles, materials, or supplies. However, emergency life safety systems, such as emergency lighting, fire alarm, and audio evacuation systems, that are discrete systems incorporated into a public building or work and that are produced as complete systems, are evaluated as a single and distinct construction material regardless of when or how the individual parts or components of those systems are delivered to the construction site. Materials purchased directly by the Government are supplies, not construction material.

Cost of components means--

(1) For components purchased by the Contractor, the acquisition cost, including transportation costs to the place of incorporation into the construction material (whether or not such costs are paid to a domestic firm), and any applicable duty (whether or not a duty-free entry certificate is issued); or

(2) For components manufactured by the Contractor, all costs associated with the manufacture of the component, including transportation costs as described in paragraph (1) of this definition, plus allocable overhead costs, but excluding profit. Cost of components does not include any costs associated with the manufacture of the construction material.

Critical component means a component that is mined, produced, or manufactured in the United States and deemed critical to the U.S. supply chain. The list of critical components is at FAR 25.105.

Critical item means a domestic construction material or domestic end product that is deemed critical to U.S. supply chain resiliency. The list of critical items is at FAR 25.105.

Domestic construction material means--

(1) For construction material that does not consist wholly or predominantly of iron or steel or a combination of both-

(i) An unmanufactured construction material mined or produced in the United States; or

(ii) A construction material manufactured in the United States, if--

(A) The cost of its components mined, produced, or manufactured in the United States exceeds 60 percent of the cost of all its components, except that the percentage will be 65 percent for items delivered in calendar years 2024 through 2028 and 75 percent for items delivered starting in calendar year 2029. Components of foreign origin of the same class or kind for which nonavailability determinations have been made are treated as domestic. Components of unknown origin are treated as foreign; or

(B) The construction material is a COTS item; or

(2) For construction material that consists wholly or predominantly of iron or steel or a combination of both, a construction material manufactured in the United States if the cost of foreign iron and steel constitutes less than 5 percent of the cost of all components used in such construction material. The cost of foreign iron and steel includes but is not limited to the cost of foreign iron or steel mill products (such as bar, billet, slab, wire, plate, or sheet), castings, or forgings utilized in the manufacture of the construction material and a good faith estimate of the cost of all foreign iron or steel components excluding COTS fasteners. Iron or steel components of unknown origin are treated as foreign. If the construction material contains multiple components, the cost of all the materials used in such construction material is calculated in accordance with the definition of "cost of components".

Fastener means a hardware device that mechanically joins or affixes two or more objects together. Examples of fasteners are nuts, bolts, pins, rivets, nails, clips, and screws.

Foreign construction material means a construction material other than a domestic construction material.

Foreign iron and steel means iron or steel products not produced in the United States. Produced in the United States means that all manufacturing processes of the iron or steel must take place in the United States, from the initial

melting stage through the application of coatings, except metallurgical processes involving refinement of steel additives. The origin of the elements of the iron or steel is not relevant to the determination of whether it is domestic or foreign.

Predominantly of iron or steel or a combination of both means that the cost of the iron and steel content exceeds 50 percent of the total cost of all its components. The cost of iron and steel is the cost of the iron or steel mill products (such as bar, billet, slab, wire, plate, or sheet), castings, or forgings utilized in the manufacture of the product and a good faith estimate of the cost of iron or steel components excluding COTS fasteners.

Steel means an alloy that includes at least 50 percent iron, between 0.02 and 2 percent carbon, and may include other elements.

United States means the 50 States, the District of Columbia, and outlying areas.

(b) Domestic preference.

(1) This clause implements 41 U.S.C. chapter 83, Buy American, by providing a preference for domestic construction material. In accordance with 41 U.S.C. 1907, the domestic content test of the Buy American statute is waived for construction material that is a COTS item, except that for construction material that consists wholly or predominantly of iron or steel or a combination of both, the domestic content test is applied only to the iron and steel content of the construction materials, excluding COTS fasteners. (See FAR 12.505(a)(2)). The Contractor shall use only domestic construction material in performing this contract, except as provided in paragraphs (b)(2) and (b)(3) of this clause.

(2) This requirement does not apply to information technology that is a commercial product or to the construction materials or components listed by the Government as follows:

NONE

(3) The Contracting Officer may add other foreign construction material to the list in paragraph (b)(2) of this clause if the Government determines that

(i) The cost of domestic construction material would be unreasonable.

(A) For domestic construction material that is not a critical item or does not contain critical components.

(1) The cost of a particular domestic construction material subject to the requirements of the Buy American statute is unreasonable when the cost of such material exceeds the cost of foreign material by more than 20 percent;

(2) For construction material that is not a COTS item and does not consist wholly or predominantly of iron or steel or a combination of both, if the cost of a particular domestic construction material is determined to be unreasonable or there is no domestic offer received, and the low offer is for foreign construction material that is manufactured in the United States and does not exceed 55 percent domestic content, the Contracting Officer will treat the lowest offer of foreign construction material that exceeds 55 percent domestic content as a domestic offer and determine whether the cost of that offer is unreasonable by applying the evaluation factor listed in paragraph (b)(3)(i)(A)(1) of this clause.

(3) The procedures in paragraph (b)(3)(i)(A)(2) of this clause will no longer apply as of January 1, 2030.

(B) For domestic construction material that is a critical item or contains critical components.

(1) The cost of a particular domestic construction material that is a critical item or contains critical components, subject to the requirements of the Buy American statute, is unreasonable when the cost of such material exceeds the cost of foreign material by more than 20 percent plus the additional preference factor identified for the critical item or construction material containing critical components listed at FAR 25.105.

(2) For construction material that does not consist wholly or predominantly of iron or steel or a combination of both, if the cost of a particular domestic construction material is determined to be unreasonable or there is no domestic offer received, and the low offer is for foreign construction material that does not exceed 55 percent domestic content, the Contracting Officer will treat the lowest foreign offer of construction material that is manufactured in the United States and exceeds 55 percent domestic content as a domestic offer, and determine whether the cost of that offer is unreasonable by applying the evaluation factor listed in paragraph (b)(3)(i)(B)(1) of this clause.

(3) The procedures in paragraph (b)(3)(i)(B)(2) of this clause will no longer apply as of January 1, 2030.

(ii) The application of the restriction of the Buy American Act to a particular construction material would be impracticable or inconsistent with the public interest; or

(iii) The construction material is not mined, produced, or manufactured in the United States in sufficient and reasonably available commercial quantities of a satisfactory quality.

(c) Request for determination of inapplicability of the Buy American Act. (1)(i) Any Contractor request to use foreign construction material in accordance with paragraph (b)(3) of this clause shall include adequate information for Government evaluation of the request, including--

(A) A description of the foreign and domestic construction materials;

(B) Unit of measure;

(C) Quantity;

(D) Price;

(E) Time of delivery or availability;

(F) Location of the construction project;

(G) Name and address of the proposed supplier; and

(H) A detailed justification of the reason for use of foreign construction materials cited in accordance with paragraph (b)(3) of this clause.

(ii) A request based on unreasonable cost shall include a reasonable survey of the market and a completed price comparison table in the format in paragraph (d) of this clause.

(iii) The price of construction material shall include all delivery costs to the construction site and any applicable duty (whether or not a duty-free certificate may be issued).

(iv) Any Contractor request for a determination submitted after contract award shall explain why the Contractor could not reasonably foresee the need for such determination and could not have requested the determination before contract award. If the Contractor does not submit a satisfactory explanation, the Contracting Officer need not make a determination.

(2) If the Government determines after contract award that an exception to the Buy American statute applies and the Contracting Officer and the Contractor negotiate adequate consideration, the Contracting Officer will modify the contract to allow use of the foreign construction material. However, when the basis for the exception is the unreasonable price of a domestic construction material, adequate consideration is not less than the differential established in paragraph (b)(3)(i) of this clause.

(3) Unless the Government determines that an exception to the Buy American statute applies, use of foreign construction material is noncompliant with the Buy American statute.

(d) Data. To permit evaluation of requests under paragraph (c) of this clause based on unreasonable cost, the Contractor shall include the following information and any applicable supporting data based on the survey of suppliers:

Foreign and Domestic Construction Materials Price Comparison

Construction material description	Unit of measure	Quantity	Price (dollars) *\
Item 1:			
Foreign construction material....	___	..... …….	___ .... ___ .....
Domestic construction material...	___	.....	___ .... ___ .....
Item 2:			
Foreign construction material....	___	..... …….	___ .... ___ .....
Domestic construction material...	___	.....	___ .... ___ .....

[* Include all delivery costs to the construction site and any applicable duty (whether or not a duty-free entry certificate is issued)].
[List name, address, telephone number, and contact for suppliers surveyed. Attach copy of response; if oral, attach summary.]
[Include other applicable supporting information.]

(End of clause)

52.228-14 IRREVOCABLE LETTER OF CREDIT (NOV 2014)

(a) “Irrevocable letter of credit” (ILC), as used in this clause, means a written commitment by a federally insured financial institution to pay all or part of a stated amount of money, until the expiration date of the letter, upon presentation by the Government (the beneficiary) of a written demand therefor. Neither the financial institution nor the offeror/Contractor can revoke or condition the letter of credit.

(b) If the offeror intends to use an ILC in lieu of a bid bond, or to secure other types of bonds such as performance and payment bonds, the letter of credit and letter of confirmation formats in paragraphs (e) and (f) of this clause shall be used.

(c) The letter of credit shall be irrevocable, shall require presentation of no document other than a written demand and the ILC (including confirming letter, if any), shall be issued/confirmed by an acceptable federally insured financial institution as provided in paragraph (d) of this clause, and--

(1) If used as a bid guarantee, the ILC shall expire no earlier than 60 days after the close of the bid acceptance period;

(2) If used as an alternative to corporate or individual sureties as security for a performance or payment bond, the offeror/Contractor may submit an ILC with an initial expiration date estimated to cover the entire period for which financial security is required or may submit an ILC with an initial expiration date that is a minimum period of one year from the date of issuance. The ILC shall provide that, unless the issuer provides the beneficiary written notice of non-renewal at least 60 days in advance of the current expiration date, the ILC is automatically extended without amendment for one year from the expiration date, or any future expiration date, until the period of required coverage is completed and the Contracting Officer provides the financial institution with a written statement waiving the right to payment. The period of required coverage shall be:

(i) For contracts subject to 40 U.S.C. chapter 31, subchapter III, Bonds, the later of--

(A) One year following the expected date of final payment;

(B) For performance bonds only, until completion of any warranty period; or

(C) For payment bonds only, until resolution of all claims filed against the payment bond during the one-year period following final payment.

(ii) For contracts not subject to the Miller Act, the later of--

(A) 90 days following final payment; or

(B) For performance bonds only, until completion of any warranty period.

(d)(1) Only federally insured financial institutions rated investment grade by a commercial rating service shall issue or confirm the ILC.

(2) Unless the financial institution issuing the ILC had letter of credit business of at least $25 million in the past year, ILCs over $5 million must be confirmed by another acceptable financial institution that had letter of credit business of at least $25 million in the past year.

(3) The Offeror/Contractor shall provide the Contracting Officer a credit rating that indicates the financial institutions have the required credit rating as of the date of issuance of the ILC.

(4) The current rating for a financial institution is available through any of the following rating services registered with the U.S. Securities and Exchange Commission (SEC) as a Nationally Recognized Statistical Rating Organization (NRSRO). NRSRO's can be located at the Web site http://www.sec.gov/answers/nrsro.htm maintained by the SEC.

(e) The following format shall be used by the issuing financial institution to create an ILC:

___
[Issuing Financial Institution's Letterhead or Name and Address]

Issue Date _ ___

IRREVOCABLE LETTER OF CREDIT NO. ___

Account party's name ___ _

Account party's address ___ _

For Solicitation No. ___ _(for reference only)

TO: [___ U.S. Government agency]

[___ U.S. Government agency's address]

1. We hereby establish this irrevocable and transferable Letter of Credit in your favor for one or more drawings up to United States $ ___ . This Letter of Credit is payable at [issuing financial institution's and, if any, confirming financial institution's] office at [___ issuing financial institution's address and, if any, confirming financial institution's address] and expires with our close of business on ___ , or any automatically extended expiration date.

2. We hereby undertake to honor your or the transferee's sight draft(s) drawn on the issuing or, if any, the confirming financial institution, for all or any part of this credit if presented with this Letter of Credit and confirmation, if any, at the office specified in paragraph 1 of this Letter of Credit on or before the expiration date or any automatically extended expiration date.

3. [This paragraph is omitted if used as a bid guarantee, and subsequent paragraphs are renumbered.] It is a condition of this Letter of Credit that it is deemed to be automatically extended without amendment for one year from the expiration date hereof, or any future expiration date, unless at least 60 days prior to any expiration date, we notify you or the transferee by registered mail, or other receipted means of delivery, that we elect not to consider this Letter of Credit renewed for any such additional period. At the time we notify you, we also agree to notify the account party (and confirming financial institution, if any) by the same means of delivery.

4. This Letter of Credit is transferable. Transfers and assignments of proceeds are to be effected without charge to either the beneficiary or the transferee/assignee of proceeds. Such transfer or assignment shall be only at the written direction of the Government (the beneficiary) in a form satisfactory to the issuing financial institution and the confirming financial institution, if any.

5. This Letter of Credit is subject to the Uniform Customs and Practice (UCP) for Documentary Credits, International Chamber of Commerce Publication No. ___ -- (Insert version in effect at the time of ILC issuance, e.g., ``Publication 600, 2006 edition'') and to the extent not inconsistent therewith, to the laws of ___ --[State of confirming financial institution, if any, otherwise State of issuing financial institution].

6. If this credit expires during an interruption of business of this financial institution as described in Article 17 of the UCP, the financial institution specifically agrees to effect payment if this credit is drawn against within 30 days after the resumption of our business.

Sincerely,

___

[___ Issuing financial institution]

(f) The following format shall be used by the financial institution to confirm an ILC:

___ [Confirming Financial Institution's Letterhead or Name and Address]

(Date) ___

Our Letter of Credit Advice Number ___

Beneficiary: ___ [U.S. Government agency]

Issuing Financial Institution: ___

Issuing Financial Institution's LC No.: ___

Gentlemen:

1. We hereby confirm the above indicated Letter of Credit, the original of which is attached, issued by ___ [name of issuing financial institution] for drawings of up to United States dollars ___ _/U.S. $ ___ and expiring with our close of business on ___ [the expiration date], or any automatically extended expiration date.

2. Draft(s) drawn under the Letter of Credit and this Confirmation are payable at our office located at ___ _.

3. We hereby undertake to honor sight draft(s) drawn under and presented with the Letter of Credit and this

Confirmation at our offices as specified herein.

4. [This paragraph is omitted if used as a bid guarantee, and subsequent paragraphs are renumbered.] It is a condition of this confirmation that it be deemed automatically extended without amendment for one year from the expiration date hereof, or any automatically extended expiration date, unless:

(a) At least 60 days prior to any such expiration date, we shall notify the Contracting Officer, or the transferee and the issuing financial institution, by registered mail or other receipted means of delivery, that we elect not to consider this confirmation extended for any such additional period; or

(b) The issuing financial institution shall have exercised its right to notify you or the transferee, the account party, and ourselves, of its election not to extend the expiration date of the Letter of Credit.

5. This confirmation is subject to the Uniform Customs and Practice (UCP) for Documentary Credits, International Chamber of Commerce Publication No. ____ -- (Insert version in effect at the time of ILC issuance, e.g., ``Publication 600, 2006 edition'') and to the extent not inconsistent therewith, to the laws of ____ --[State of confirming financial institution].

6. If this confirmation expires during an interruption of business of this financial institution as described in Article 17 of the UCP, we specifically agree to effect payment if this credit is drawn against within 30 days after the resumption of our business.

Sincerely,

___

[Confirming financial institution]

(g) The following format shall be used by the Contracting Officer for a sight draft to draw on the Letter of Credit:

SIGHT DRAFT

___
[City, State]

(Date) ___

[Name and address of financial institution]

Pay to the order of ___ [Beneficiary Agency] ___ the sum of United States ___ This draft is drawn under Irrevocable Letter of Credit No. ___

___ [Beneficiary Agency]

By: ___

(End of clause)

52.232-39 UNENFORCEABILITY OF UNAUTHORIZED OBLIGATIONS (JUN 2013)

(a) Except as stated in paragraph (b) of this clause, when any supply or service acquired under this contract is subject to any End User License Agreement (EULA), Terms of Service (TOS), or similar

legal instrument or agreement, that includes any clause requiring the Government to indemnify the Contractor or any person or entity for damages, costs, fees, or any other loss or liability that would create an Anti-Deficiency Act violation (31 U.S.C. 1341), the following shall govern:

(1) Any such clause is unenforceable against the Government.

(2) Neither the Government nor any Government authorized end user shall be deemed to have agreed to such clause by virtue of it appearing in the EULA, TOS, or similar legal instrument or agreement. If the EULA, TOS, or similar legal instrument or agreement is invoked through an ``I agree'' click box or other comparable mechanism (e.g., ``click-wrap'' or ``browse-wrap'' agreements), execution does not bind the Government or any Government authorized end user to such clause.

(3) Any such clause is deemed to be stricken from the EULA, TOS, or similar legal instrument or agreement.

(b) Paragraph (a) of this clause does not apply to indemnification by the Government that is expressly authorized by statute and specifically authorized under applicable agency regulations and procedures.

(End of clause)

52.232-40 PROVIDING ACCELERATED PAYMENTS TO SMALL BUSINESS SUBCONTRACTORS (MAR 2023)

(a)(1) In accordance with 31 U.S.C. 3903 and 10 U.S.C. 3801, within 15 days after receipt of accelerated payments from the Government, the Contractor shall make accelerated payments to its small business subcontractors under this contract, to the maximum extent practicable and prior to when such payment is otherwise required under the applicable contract or subcontract, after receipt of a proper invoice and all other required documentation from the small business subcontractor.

(2) The Contractor agrees to make such payments to its small business subcontractors without any further consideration from or fees charged to the subcontractor.

(b) The acceleration of payments under this clause does not provide any new rights under the Prompt Payment Act.

(c) Include the substance of this clause, including this paragraph (c), in all subcontracts with small business concerns, including subcontracts with small business concerns for the acquisition of commercial products or commercial services.

(End of clause)

52.233-4 APPLICABLE LAW FOR BREACH OF CONTRACT CLAIM (OCT 2004)

United States law will apply to resolve any claim of breach of this contract.

(End of clause)

52.236-1 PERFORMANCE OF WORK BY THE CONTRACTOR (APR 1984)

The Contractor shall perform on the site, and with its own organization, work equivalent to at least fifteen (15%) percent of the total amount of work to be performed under the contract. This percentage may be reduced by a supplemental agreement to this contract if, during performing the work, the Contractor requests a reduction and the Contracting Officer determines that the reduction would be to the advantage of the Government.

(End of clause)

52.236-4 PHYSICAL DATA (APR 1984)

Data and information furnished or referred to below is for the Contractor's information. The Government shall not be responsible for any interpretation of or conclusion drawn from the data or information by the Contractor.

See Division 01 Specifications

(End of clause)

52.252-2 CLAUSES INCORPORATED BY REFERENCE (FEB 1998)

This contract incorporates one or more clauses by reference, with the same force and effect as if they were given in full text. Upon request, the Contracting Officer will make their full text available. Also, the full text of a clause may be accessed electronically at this/these address(es):

https://www.acquisition.gov/browse/index/far

(End of clause)

52.252-6 AUTHORIZED DEVIATIONS IN CLAUSES (NOV 2020)

(a) The use in this solicitation or contract of any Federal Acquisition Regulation (48 CFR Chapter 1) clause with an authorized deviation is indicated by the addition of "(DEVIATION)" after the date of the clause.

(b) The use in this solicitation or contract of any Defense Federal Acquisition Regulation (48 CFR Chapter 2) clause with an authorized deviation is indicated by the addition of "(DEVIATION)" after the name of the regulation.

(End of clause)

252.203-7004 DISPLAY OF HOTLINE POSTERS (JAN 2023)

(a) Definition. As used in this clause--

United States means the 50 States, the District of Columbia, and outlying areas.

(b) Display of hotline poster(s).

(1)(i) The Contractor shall display prominently the DoD fraud, waste, and abuse hotline poster prepared by the DoD Office of the Inspector General, in effect at time of contract award, in common work areas within business segments performing work under Department of Defense (DoD) contracts.

(ii) For contracts performed outside the United States, when security concerns can be appropriately demonstrated, the contracting officer may provide the contractor the option to publicize the program to contractor personnel in a manner other than public display of the poster, such as private employee written instructions and briefings.

(2) If the contract is funded, in whole or in part, by Department of Homeland Security (DHS) disaster relief funds and the work is to be performed in the United States, the DHS fraud hotline poster shall be displayed in addition to the DoD hotline poster. If a display of a DHS fraud hotline poster is required, the Contractor may obtain such poster from—

(i) DHS Office of Inspector General/MAIL STOP 0305, Attn: Office of Investigations – Hotline, 245 Murray Lane SW, Washington, DC 20528-0305; or

(ii) Via the internet at https://www.oig.dhs.gov/assets/Hotline/DHS_OIG_Hotline-optimized.jpg.

(c)(1) The DoD hotline poster may be obtained from: Defense Hotline, The Pentagon, Washington, D.C. 20301-1900, or is also available via the internet at https://www.dodig.mil/Resources/Posters-and-Brochures/.

(2) If a significant portion of the employee workforce does not speak English, then the poster is to be displayed in the foreign languages that a significant portion of the employees speak.

(3) Additionally, if the Contractor maintains a company website as a method of providing information to employees, the Contractor shall display an electronic version of the required poster at the website.

(d) Subcontracts. The Contractor shall include the substance of this clause, including this paragraph (d), in all subcontracts that exceed the threshold specified in Defense Federal Acquisition Regulation Supplement 203.1004(b)(2)(ii) on the date of subcontract award, except when the subcontract is for the acquisition of a commercial product or commercial service.

(End of clause)

252.204-7006 BILLING INSTRUCTIONS (OCT 2005)

When submitting a request for payment, the Contractor shall--

(a) Identify the contract line item(s) on the payment request that reasonably reflect contract work performance; and

(b) Separately identify a payment amount for each contract line item included in the payment request.

(End of clause)

252.204-7012 SAFEGUARDING COVERED DEFENSE INFORMATION AND CYBER INCIDENT REPORTING (JAN 2023)

(a) Definitions. As used in this clause--

Adequate security means protective measures that are commensurate with the consequences and probability of loss, misuse, or unauthorized access to, or modification of information.

Compromise means disclosure of information to unauthorized persons, or a violation of the security policy of a system, in which unauthorized intentional or unintentional disclosure, modification, destruction, or loss of an object, or the copying of information to unauthorized media may have occurred.

Contractor attributional/proprietary information means information that identifies the contractor(s), whether directly or indirectly, by the grouping of information that can be traced back to the contractor(s) (e.g., program description, facility locations), personally identifiable information, as well as trade secrets, commercial or financial information, or other commercially sensitive information that is not customarily shared outside of the company.

Controlled technical information means technical information with military or space application that is subject to controls on the access, use, reproduction, modification, performance, display, release, disclosure, or dissemination. Controlled technical information would meet the criteria, if disseminated, for distribution statements B through F using the criteria set forth in DoD Instruction 5230.24, Distribution Statements on Technical Documents. The term does not include information that is lawfully publicly available without restrictions.

Covered contractor information system means an unclassified information system that is owned, or operated by or for, a contractor and that processes, stores, or transmits covered defense information.

Covered defense information means unclassified controlled technical information or other information, as described in the Controlled Unclassified Information (CUI) Registry at http://www.archives.gov/cui/registry/category-list.html, that requires safeguarding or dissemination controls pursuant to and consistent with law, regulations, and Governmentwide policies, and is--

(1) Marked or otherwise identified in the contract, task order, or delivery order and provided to the contractor by or on behalf of DoD in support of the performance of the contract; or

(2) Collected, developed, received, transmitted, used, or stored by or on behalf of the contractor in support of the performance of the contract.

Cyber incident means actions taken through the use of computer networks that result in a compromise or an actual or potentially adverse effect on an information system and/or the information residing therein.

Forensic analysis means the practice of gathering, retaining, and analyzing computer-related data for investigative purposes in a manner that maintains the integrity of the data.

Information system means a discrete set of information resources organized for the collection, processing, maintenance, use, sharing, dissemination, or disposition of information.

Malicious software means computer software or firmware intended to perform an unauthorized process that will have adverse impact on the confidentiality, integrity, or availability of an information system. This definition includes a virus, worm, Trojan horse, or other code-based entity that infects a host, as well as spyware and some forms of adware.

Media means physical devices or writing surfaces including, but is not limited to, magnetic tapes, optical disks, magnetic disks, large-scale integration memory chips, and printouts onto which covered defense information is recorded, stored, or printed within a covered contractor information system.

Operationally critical support means supplies or services designated by the Government as critical for airlift, sealift, intermodal transportation services, or logistical support that is essential to the mobilization, deployment, or sustainment of the Armed Forces in a contingency operation.

Rapidly report means within 72 hours of discovery of any cyber incident.

Technical information means technical data or computer software, as those terms are defined in the clause at DFARS 252.227-7013, Rights in Technical Data--Other Than Commercial Products and Commercial Services, regardless of whether or not the clause is incorporated in this solicitation or contract. Examples of technical information include research and engineering data, engineering drawings, and associated lists, specifications, standards, process sheets, manuals, technical reports, technical orders, catalog-item identifications, data sets, studies and analyses and related information, and computer software executable code and source code.

(b) Adequate security. The Contractor shall provide adequate security on all covered contractor information systems. To provide adequate security, the Contractor shall implement, at a minimum, the following information security protections:

(1) For covered contractor information systems that are part of an information technology (IT) service or system operated on behalf of the Government, the following security requirements apply:

(i) Cloud computing services shall be subject to the security requirements specified in the clause 252.239-7010, Cloud Computing Services, of this contract.

(ii) Any other such IT service or system (i.e., other than cloud computing) shall be subject to the security requirements specified elsewhere in this contract.

(2) For covered contractor information systems that are not part of an IT service or system operated on behalf of the Government and therefore are not subject to the security requirement specified at paragraph (b)(1) of this clause, the following security requirements apply:

(i) Except as provided in paragraph (b)(2)(ii) of this clause, the covered contractor information system shall be subject to the security requirements in National Institute of Standards and Technology (NIST) Special Publication (SP) 800-171, "Protecting Controlled Unclassified Information in Nonfederal Information Systems and Organizations" (available via the internet at http://dx.doi.org/10.6028/NIST.SP.800-171) in effect at the time the solicitation is issued or as authorized by the Contracting Officer.

(ii)(A) The Contractor shall implement NIST SP 800-171, as soon as practical, but not later than December 31, 2017. For all contracts awarded prior to October 1, 2017, the Contractor shall notify the DoD Chief Information Officer (CIO), via email at osd.dibcsia@mail.mil, within 30 days of contract award, of any security requirements specified by NIST SP 800-171 not implemented at the time of contract award.

(B) The Contractor shall submit requests to vary from NIST SP 800-171 in writing to the Contracting Officer, for consideration by the DoD CIO. The Contractor need not implement any security requirement adjudicated by an authorized representative of the DoD CIO to be nonapplicable or to have an alternative, but equally effective, security measure that may be implemented in its place.

(C) If the DoD CIO has previously adjudicated the contractor's requests indicating that a requirement is not applicable or that an alternative security measure is equally effective, a copy of that approval shall be provided to the Contracting Officer when requesting its recognition under this contract.

(D) If the Contractor intends to use an external cloud service provider to store, process, or transmit any covered defense information in performance of this contract, the Contractor shall require and ensure that the cloud service provider meets security requirements equivalent to those established by the Government for the Federal Risk and Authorization Management Program (FedRAMP) Moderate baseline (https://www.fedramp.gov/resources/documents/) and that the cloud service provider complies with requirements in paragraphs (c) through (g) of this clause for cyber incident reporting, malicious software, media preservation and protection, access to additional information and equipment necessary for forensic analysis, and cyber incident damage assessment.

(3) Apply other information systems security measures when the Contractor reasonably determines that information systems security measures, in addition to those identified in paragraphs (b)(1) and (2) of this clause, may be required to provide adequate security in a dynamic environment or to accommodate special circumstances (e.g., medical devices) and any individual, isolated, or temporary deficiencies based on an assessed risk or vulnerability. These measures may be addressed in a system security plan.

(c) Cyber incident reporting requirement.

(1) When the Contractor discovers a cyber incident that affects a covered contractor information system or the covered defense information residing therein, or that affects the contractor's ability to perform the requirements of the contract that are designated as operationally critical support and identified in the contract, the Contractor shall--

(i) Conduct a review for evidence of compromise of covered defense information, including, but not limited to, identifying compromised computers, servers, specific data, and user accounts. This review shall also include analyzing covered contractor information system(s) that were part of the cyber incident, as well as other information systems on the Contractor's network(s), that may have been accessed as a result of the incident in order to identify compromised covered defense information, or that affect the Contractor's ability to provide operationally critical support; and

(ii) Rapidly report cyber incidents to DoD at https://dibnet.dod.mil.

(2) Cyber incident report. The cyber incident report shall be treated as information created by or for DoD and shall include, at a minimum, the required elements at https://dibnet.dod.mil.

(3) Medium assurance certificate requirement. In order to report cyber incidents in accordance with this clause, the Contractor or subcontractor shall have or acquire a DoD-approved medium assurance certificate to report cyber incidents. For information on obtaining a DoD-approved medium assurance certificate, see https://public.cyber.mil/eca/.

(d) Malicious software. When the Contractor or subcontractors discover and isolate malicious software in connection with a reported cyber incident, submit the malicious software to DoD Cyber Crime Center (DC3) in accordance with instructions provided by DC3 or the Contracting Officer. Do not send the malicious software to the Contracting Officer.

(e) Media preservation and protection. When a Contractor discovers a cyber incident has occurred, the Contractor shall preserve and protect images of all known affected information systems identified in paragraph (c)(1)(i) of this clause and all relevant monitoring/packet capture data for at least 90 days from the submission of the cyber incident report to allow DoD to request the media or decline interest.

(f) Access to additional information or equipment necessary for forensic analysis. Upon request by DoD, the Contractor shall provide DoD with access to additional information or equipment that is necessary to conduct a forensic analysis.

(g) Cyber incident damage assessment activities. If DoD elects to conduct a damage assessment, the Contracting Officer will request that the Contractor provide all of the damage assessment information gathered in accordance with paragraph (e) of this clause.

(h) DoD safeguarding and use of contractor attributional/proprietary information. The Government shall protect against the unauthorized use or release of information obtained from the contractor (or derived from information obtained from the contractor) under this clause that includes contractor attributional/proprietary information, including such information submitted in accordance with paragraph (c). To the maximum extent practicable, the Contractor shall identify and mark attributional/proprietary information. In making an authorized release of such information, the Government will implement appropriate procedures to minimize the contractor attributional/proprietary information that is included in such authorized release, seeking to include only that information that is necessary for the authorized purpose(s) for which the information is being released.

(i) Use and release of contractor attributional/proprietary information not created by or for DoD. Information that is obtained from the contractor (or derived from information obtained from the contractor) under this clause that is not created by or for DoD is authorized to be released outside of DoD--

(1) To entities with missions that may be affected by such information;

(2) To entities that may be called upon to assist in the diagnosis, detection, or mitigation of cyber incidents;

(3) To Government entities that conduct counterintelligence or law enforcement investigations;

(4) For national security purposes, including cyber situational awareness and defense purposes (including with Defense Industrial Base (DIB) participants in the program at 32 CFR part 236); or

(5) To a support services contractor (“recipient”) that is directly supporting Government activities under a contract that includes the clause at 252.204-7009, Limitations on the Use or Disclosure of Third-Party Contractor Reported Cyber Incident Information.

(j) Use and release of contractor attributional/proprietary information created by or for DoD. Information that is obtained from the contractor (or derived from information obtained from the contractor) under this clause that is created by or for DoD (including the information submitted pursuant to paragraph (c) of this clause) is authorized to be used and released outside of DoD for purposes and activities authorized by paragraph (i) of this clause, and for any other lawful Government purpose or activity, subject to all applicable statutory, regulatory, and policy based restrictions on the Government's use and release of such information.

(k) The Contractor shall conduct activities under this clause in accordance with applicable laws and regulations on the interception, monitoring, access, use, and disclosure of electronic communications and data.

(l) Other safeguarding or reporting requirements. The safeguarding and cyber incident reporting required by this clause in no way abrogates the Contractor's responsibility for other safeguarding or cyber incident reporting pertaining to its unclassified information systems as required by other applicable clauses of this contract, or as a result of other applicable U.S. Government statutory or regulatory requirements.

(m) Subcontracts. The Contractor shall--

(1) Include this clause, including this paragraph (m), in subcontracts, or similar contractual instruments, for operationally critical support, or for which subcontract performance will involve covered defense information, including subcontracts for commercial products or commercial services, without alteration, except to identify the parties. The Contractor shall determine if the information required for subcontractor performance retains its identity as covered defense information and will require protection under this clause, and, if necessary, consult with the Contracting Officer; and

(2) Require subcontractors to--

(i) Notify the prime Contractor (or next higher-tier subcontractor) when submitting a request to vary from a NIST SP 800-171 security requirement to the Contracting Officer, in accordance with paragraph (b)(2)(ii)(B) of this clause; and

(ii) Provide the incident report number, automatically assigned by DoD, to the prime Contractor (or next higher-tier subcontractor) as soon as practicable, when reporting a cyber incident to DoD as required in paragraph (c) of this clause.

(End of clause)

252.204-7015 NOTICE OF AUTHORIZED DISCLOSURE OF INFORMATION FOR LITIGATION SUPPORT (JAN 2023)

(a) Definitions. As used in this clause--

Computer software means computer programs, source code, source code listings, object code listings, design details, algorithms, processes, flow charts, formulae, and related material that would enable the software to be reproduced, recreated, or recompiled. Computer software does not include computer data bases or computer software documentation.

Litigation support means administrative, technical, or professional services provided in support of the Government during or in anticipation of litigation.

Litigation support contractor means a contractor (including its experts, technical consultants, subcontractors, and suppliers) providing litigation support under a contract that contains the clause at 252.204-7014, Limitations on the Use or Disclosure of Information by Litigation Support Contractors.

Sensitive information means controlled unclassified information of a commercial, financial, proprietary, or privileged nature. The term includes technical data and computer software, but does not include information that is lawfully, publicly available without restriction.

Technical data means recorded information, regardless of the form or method of the recording, of a scientific or technical nature (including computer software documentation). The term does not include computer software or data incidental to contract administration, such as financial and/or management information.

(b) Notice of authorized disclosures. Notwithstanding any other provision of this solicitation or contract, the Government may disclose to a litigation support contractor, for the sole purpose of litigation support activities, any information, including sensitive information, received—

(1) Within or in connection with a quotation or offer; or

(2) In the performance of or in connection with a contract.

(c) Subcontracts. Include the substance of this clause, including this paragraph (c), in all subcontracts, including subcontracts for commercial products or commercial services.

(End of clause)

252.204-7018 PROHIBITION ON THE ACQUISITION OF COVERED DEFENSE TELECOMMUNICATIONS EQUIPMENT OR SERVICES (JAN 2023)

(a) Definitions. As used in this clause--

Covered defense telecommunications equipment or services means--

(1) Telecommunications equipment produced by Huawei Technologies Company or ZTE Corporation, or any subsidiary or affiliate of such entities;

(2) Telecommunications services provided by such entities or using such equipment; or

(3) Telecommunications equipment or services produced or provided by an entity that the Secretary of Defense reasonably believes to be an entity owned or controlled by, or otherwise connected to, the government of a covered foreign country.

Covered foreign country means--

(1) The People's Republic of China; or

(2) The Russian Federation.

Covered missions means--

(1) The nuclear deterrence mission of DoD, including with respect to nuclear command, control, and communications, integrated tactical warning and attack assessment, and continuity of Government; or

(2) The homeland defense mission of DoD, including with respect to ballistic missile defense.

Critical technology means--

(1) Defense articles or defense services included on the United States Munitions List set forth in the International Traffic in Arms Regulations under subchapter M of chapter I of title 22, Code of Federal Regulations;

(2) Items included on the Commerce Control List set forth in Supplement No. 1 to part 774 of the Export Administration Regulations under subchapter C of chapter VII of title 15, Code of Federal Regulations, and controlled--

(i) Pursuant to multilateral regimes, including for reasons relating to national security, chemical and biological weapons proliferation, nuclear nonproliferation, or missile technology; or

(ii) For reasons relating to regional stability or surreptitious listening;

(3) Specially designed and prepared nuclear equipment, parts and components, materials, software, and technology covered by part 810 of title 10, Code of Federal Regulations (relating to assistance to foreign atomic energy activities);

(4) Nuclear facilities, equipment, and material covered by part 110 of title 10, Code of Federal Regulations (relating to export and import of nuclear equipment and material);

(5) Select agents and toxins covered by part 331 of title 7, Code of Federal Regulations, part 121 of title 9 of such Code, or part 73 of title 42 of such Code; or

(6) Emerging and foundational technologies controlled pursuant to section 1758 of the Export Control Reform Act of 2018 (50 U.S.C. 4817).

Substantial or essential component means any component necessary for the proper function or performance of a piece of equipment, system, or service.

(b) Prohibition. In accordance with section 1656 of the National Defense Authorization Act for Fiscal Year 2018 (Pub. L. 115-91), the contractor shall not provide to the Government any equipment, system, or service to carry out covered missions that uses covered defense telecommunications equipment or services as a substantial or essential component of any system, or as critical technology as part of any system, unless the covered defense telecommunication equipment or services are covered by a waiver described in Defense Federal Acquisition Regulation Supplement 204.2104.

(c) Procedures. The Contractor shall review the list of excluded parties in the System for Award Management (SAM) at https://www.sam.gov for entities that are excluded when providing any equipment, system, or service, to carry out covered missions, that uses covered defense telecommunications equipment or services as a substantial or essential component of any system, or as critical technology as part of any system, unless a waiver is granted.

(d) Reporting.

(1) In the event the Contractor identifies covered defense telecommunications equipment or services used as a substantial or essential component of any system, or as critical technology as part of any system, during contract performance, the Contractor shall report at https://dibnet.dod.mil the information in paragraph (d)(2) of this clause.

(2) The Contractor shall report the following information pursuant to paragraph (d)(1) of this clause:

(i) Within 3 business days from the date of such identification or notification: The contract number; the order number(s), if applicable; supplier name; brand; model number (original equipment manufacturer number, manufacturer part number, or wholesaler number); item description; and any readily available information about mitigation actions undertaken or recommended.

(ii) Within 30 business days of submitting the information in paragraph (d)(2)(i) of this clause: Any further available information about mitigation actions undertaken or recommended. In addition, the Contractor shall describe the efforts it undertook to prevent use or submission of a covered defense telecommunications equipment or services, and any additional efforts that will be incorporated to prevent future use or submission of covered telecommunications equipment or services.

(e) Subcontracts. The Contractor shall insert the substance of this clause, including this paragraph (e), in all subcontracts and other contractual instruments, including subcontracts for the acquisition of commercial products or commercial services.

(End of clause)

252.204-7020 NIST SP 800-171 DOD ASSESSMENT REQUIREMENTS (JAN 2023)

(a) Definitions.

Basic Assessment means a contractor's self-assessment of the contractor's implementation of NIST SP 800-171 that-

(1) Is based on the Contractor's review of their system security plan(s) associated with covered contractor information system(s);

(2) Is conducted in accordance with the NIST SP 800-171 DoD Assessment Methodology; and

(3) Results in a confidence level of "Low" in the resulting score, because it is a self-generated score.

Covered contractor information system has the meaning given in the clause 252.204-7012, Safeguarding Covered Defense Information and Cyber Incident Reporting, of this contract.

High Assessment means an assessment that is conducted by Government personnel using NIST SP 800-171A, Assessing Security Requirements for Controlled Unclassified Information that--

(1) Consists of--

(i) A review of a contractor's Basic Assessment;

(ii) A thorough document review;

(iii) Verification, examination, and demonstration of a Contractor's system security plan to validate that NIST SP 800-171 security requirements have been implemented as described in the contractor's system security plan; and

(iv) Discussions with the contractor to obtain additional information or clarification, as needed; and

(2) Results in a confidence level of "High" in the resulting score.

Medium Assessment means an assessment conducted by the Government that--

(1) Consists of--

(i) A review of a contractor's Basic Assessment;

(ii) A thorough document review; and

(iii) Discussions with the contractor to obtain additional information or clarification, as needed; and

(2) Results in a confidence level of "Medium" in the resulting score.

(b) Applicability. This clause applies to covered contractor information systems that are required to comply with the National Institute of Standards and Technology (NIST) Special Publication (SP) 800-171, in accordance with Defense Federal Acquisition Regulation System (DFARS) clause at 252.204-7012, Safeguarding Covered Defense Information and Cyber Incident Reporting, of this contract.

(c) Requirements. The Contractor shall provide access to its facilities, systems, and personnel necessary for the Government to conduct a Medium or High NIST SP 800-171 DoD Assessment, as described in NIST SP 800-171 DoD Assessment Methodology at https://www.acq.osd.mil/asda/dpc/cp/cyber/safeguarding.html#nistSP800171, if necessary.

(d) Procedures. Summary level scores for all assessments will be posted in the Supplier Performance Risk System (SPRS) (https://www.sprs.csd.disa.mil/) to provide DoD Components visibility into the summary level scores of strategic assessments.

(1) Basic Assessments. A contractor may submit, via encrypted email, summary level scores of Basic Assessments conducted in accordance with the NIST SP 800-171 DoD Assessment Methodology to webptsmh@navy.mil for posting to SPRS.

(i) The email shall include the following information:

(A) Version of NIST SP 800-171 against which the assessment was conducted.

(B) Organization conducting the assessment (e.g., Contractor self-assessment).

(C) For each system security plan (security requirement 3.12.4) supporting the performance of a DoD contract--

(1) All industry Commercial and Government Entity (CAGE) code(s) associated with the information system(s) addressed by the system security plan; and

(2) A brief description of the system security plan architecture, if more than one plan exists.

(D) Date the assessment was completed.

(E) Summary level score (e.g., 95 out of 110, NOT the individual value for each requirement).

(F) Date that all requirements are expected to be implemented (i.e., a score of 110 is expected to be achieved) based on information gathered from associated plan(s) of action developed in accordance with NIST SP 800-171.

(ii) If multiple system security plans are addressed in the email described at paragraph (b)(1)(i) of this section, the Contractor shall use the following format for the report:

System security plan	CAGE codes supported by this plan	Brief description of the plan architecture	Date of assessment	Total score	Date score of 110 will achieved

(2) Medium and High Assessments. DoD will post the following Medium and/or High Assessment summary level scores to SPRS for each system security plan assessed:

(i) The standard assessed (e.g., NIST SP 800-171 Rev 1).

(ii) Organization conducting the assessment, e.g., DCMA, or a specific organization (identified by Department of Defense Activity Address Code (DoDAAC)).

(iii) All industry CAGE code(s) associated with the information system(s) addressed by the system security plan.

(iv) A brief description of the system security plan architecture, if more than one system security plan exists.

(v) Date and level of the assessment, i.e., medium or high.

(vi) Summary level score (e.g., 105 out of 110, not the individual value assigned for each requirement).

(vii) Date that all requirements are expected to be implemented (i.e., a score of 110 is expected to be achieved) based on information gathered from associated plan(s) of action developed in accordance with NIST SP 800-171.

(e) Rebuttals. (1) DoD will provide Medium and High Assessment summary level scores to the Contractor and offer the opportunity for rebuttal and adjudication of assessment summary level scores prior to posting the summary level scores to SPRS (see SPRS User's Guide https://www.sprs.csd.disa.mil/pdf/SPRS_Awardee.pdf).

(2) Upon completion of each assessment, the contractor has 14 business days to provide additional information to demonstrate that they meet any security requirements not observed by the assessment team or to rebut the findings that may be of question.

(f) Accessibility.

(1) Assessment summary level scores posted in SPRS are available to DoD personnel, and are protected, in accordance with the standards set forth in DoD Instruction 5000.79, Defense-wide Sharing and Use of Supplier and Product Performance Information (PI).

(2) Authorized representatives of the Contractor for which the assessment was conducted may access SPRS to view their own summary level scores, in accordance with the SPRS Software User's Guide for Awardees/Contractors available at https://www.sprs.csd.disa.mil/pdf/SPRS_Awardee.pdf.

(3) A High NIST SP 800-171 DoD Assessment may result in documentation in addition to that listed in this clause. DoD will retain and protect any such documentation as "Controlled Unclassified Information (CUI)" and intended for internal DoD use only. The information will be protected against unauthorized use and release, including through the exercise of applicable exemptions under the Freedom of Information Act (e.g., Exemption 4 covers trade secrets and commercial or financial information obtained from a contractor that is privileged or confidential).

(g) Subcontracts.

(1) The Contractor shall insert the substance of this clause, including this paragraph (g), in all subcontracts and other contractual instruments, including subcontracts for the acquisition of commercial products or commercial services (excluding commercially available off-the-shelf items).

(2) The Contractor shall not award a subcontract or other contractual instrument, that is subject to the implementation of NIST SP 800-171 security requirements, in accordance with DFARS clause 252.204-7012 of this contract, unless the subcontractor has completed, within the last 3 years, at least a Basic NIST SP 800-171 DoD Assessment, as described in https://www.acq.osd.mil/asda/dpc/cp/cyber/safeguarding.html#nistSP800171, for all covered contractor information systems relevant to its offer that are not part of an information technology service or system operated on behalf of the Government.

(3) If a subcontractor does not have summary level scores of a current NIST SP 800-171 DoD Assessment (i.e., not more than 3 years old unless a lesser time is specified in the solicitation) posted in SPRS, the subcontractor may conduct and submit a Basic Assessment, in accordance with the NIST SP 800-171 DoD Assessment Methodology, to webptsmh@navy.mil for posting to SPRS along with the information required by paragraph (d) of this clause.

(End of clause)

252.225-7048 EXPORT-CONTROLLED ITEMS (JUNE 2013)

(a) Definition. ``Export-controlled items,'' as used in this clause, means items subject to the Export Administration Regulations (EAR) (15 CFR Parts 730-774) or the International Traffic in Arms Regulations (ITAR) (22 CFR Parts 120-130). The term includes--

(1) ``Defense items,'' defined in the Arms Export Control Act, 22 U.S.C. 2778(j)(4)(A), as defense articles, defense services, and related technical data, and further defined in the ITAR, 22 CFR Part 120; and

(2) ``Items,'' defined in the EAR as ``commodities'', ``software'', and ``technology,'' terms that are also defined in the EAR, 15 CFR 772.1.

(b) The Contractor shall comply with all applicable laws and regulations regarding export-controlled items, including, but not limited to, the requirement for contractors to register with the Department of State in accordance with the ITAR. The Contractor shall consult with the Department of State regarding any questions relating to compliance with the ITAR and shall consult with the Department of Commerce regarding any questions relating to compliance with the EAR.

(c) The Contractor's responsibility to comply with all applicable laws and regulations regarding export-controlled items exists independent of, and is not established or limited by, the information provided by this clause.

(d) Nothing in the terms of this contract adds, changes, supersedes, or waives any of the requirements of applicable Federal laws, Executive orders, and regulations, including but not limited to—

(1) The Export Administration Act of 1979, as amended (50 U.S.C. App. 2401, et seq.);

(2) The Arms Export Control Act (22 U.S.C. 2751, et seq.);

(3) The International Emergency Economic Powers Act (50 U.S.C. 1701, et seq.);

(4) The Export Administration Regulations (15 CFR Parts 730-774);

(5) The International Traffic in Arms Regulations (22 CFR Parts 120-130); and

(6) Executive Order 13222, as extended.

(e) The Contractor shall include the substance of this clause, including this paragraph (e), in all subcontracts.

(End of clause)

252.225-7056 PROHIBITION REGARDING BUSINESS OPERATIONS WITH THE MADURO REGIME (JAN 2023)

(a) Definitions. As used in this clause--

Agency or instrumentality of the government of Venezuela means an agency or instrumentality of a foreign state as defined in 28 U.S.C. 1603(b), with each reference in section 1603(b) to a foreign state deemed to be a reference to Venezuela.

Business operations means engaging in commerce in any form, including acquiring, developing, maintaining, owning, selling, possessing, leasing, or operating equipment, facilities, personnel, products, services, personal property, real property, or any other apparatus of business or commerce.

Government of Venezuela means the government of any political subdivision of Venezuela, and any agency or instrumentality of the government of Venezuela.

Person means--

(1) A natural person, corporation, company, business association, partnership, society, trust, or any other nongovernmental entity, organization, or group;

(2) Any governmental entity or instrumentality of a government, including a multilateral development institution (as defined in section 1701(c)(3) of the International Financial Institutions Act (22 U.S.C. 262r(c)(3)); and

(3) Any successor, subunit, parent entity, or subsidiary of, or any entity under common ownership or control with, any entity described in paragraph (1) or (2) of this definition.

(b) Prohibition. In accordance with section 890 of the National Defense Authorization Act for Fiscal Year 2020 (Pub. L. 116-92), DoD is prohibited from entering into a contract for the procurement of products or services with any person that has business operations with an authority of the government of Venezuela that is not recognized as the legitimate government of Venezuela by the U.S. Government, unless the person has a valid license to operate in Venezuela issued by the Office of Foreign Assets Control of the Department of the Treasury.

(c) The Contractor shall--

(1) Not have any business operations with an authority of the Maduro regime or the government of Venezuela that is not recognized as the legitimate government of Venezuela by the U.S. Government; or

(2) Have a valid license to operate in Venezuela issued by the Office of Foreign Assets Control of the Department of the Treasury.

(d) Subcontracts. The Contractor shall insert the substance of this clause, including this paragraph (d), in all subcontracts, including subcontracts for the acquisition of commercial products.

(End of clause)

252.225-7972 PROHIBITION ON THE PROCUREMENT OF FOREIGN-MADE UNMANNED AIRCRAFT SYSTEMS (MAY 2020) (DEVIATION 2020-O0015)

(a) Prohibition. In accordance with section 848 of the National Defense Authorization Act for Fiscal Year 2020, the Contractor shall not provide or use in the performance of this contract -

(1) An unmanned aircraft system (UAS), or any related services or equipment, that -

(i) Is manufactured in the People's Republic of China or by an entity domiciled in the People's Republic of China;

(ii) Uses flight controllers, radios, data transmission devices, cameras, or gimbals manufactured in the People's Republic of China or by an entity domiciled in the People's Republic of China;

(iii) Uses a ground control system or operating software developed in the People's Republic of China or by an entity domiciled in the People's Republic of China; or

(iv) Uses network connectivity or data storage located in, or administered by an entity domiciled in, the People's Republic of China; or

(2) A system for the detection or identification of a UAS, or any related services or equipment, that is manufactured-

(i) In the People's Republic of China; or

(ii) By an entity domiciled in the People's Republic of China.

(b) Subcontracts. The Contractor shall insert the substance of this clause, including this paragraph (b), in all subcontracts or other contractual instruments, including subcontracts for the acquisition of commercial items.

(End of clause)

252.232-7017 ACCELERATING PAYMENTS TO SMALL BUSINESS SUBCONTRACTORS--PROHIBITION ON FEES AND CONSIDERATION (APR 2020)

(a) Definition. Accelerated payment, as used in this clause, means a payment made to a small business subcontractor as quickly as possible, with a goal of 15 days or less after receipt of payment from the Government or receipt of a proper invoice from the subcontractor, whichever is later.

(b) In accordance with section 852 of Public Law 115-232, the Contractor shall not require any further consideration from or charge fees to the small business subcontractor when making accelerated payments, as defined in paragraph (a) of this clause, to subcontractors under the clause at FAR 52.232-40, Providing Accelerated Payments to Small Business Subcontractors.

(c) Subcontracts. Include the substance of this clause, including this paragraph (c), in all subcontracts with small business concerns, including those for the acquisition of commercial items.

(End of clause)

252.236-7001 CONTRACT DRAWINGS AND SPECIFICATIONS (AUG 2000)

(a) The Government will provide to the Contractor, without charge, one set of contract drawings and specifications, except publications incorporated into the technical provisions by reference, in electronic or paper media as chosen by the Contracting Officer.

(b) The Contractor shall--

(1) Check all drawings furnished immediately upon receipt;

(2) Compare all drawings and verify the figures before laying out the work;

(3) Promptly notify the Contracting Officer of any discrepancies;

(4) Be responsible for any errors that might have been avoided by complying with this paragraph (b); and

(5) Reproduce and print contract drawings and specifications as needed.

(c) In general--

(1) Large-scale drawings shall govern small-scale drawings; and

(2) The Contractor shall follow figures marked on drawings in preference to scale measurements.

(d) Omissions from the drawings or specifications or the misdescription of details of work that are manifestly necessary to carry out the intent of the drawings and specifications, or that are customarily performed, shall not relieve the Contractor from performing such omitted or misdescribed details of the work. The Contractor shall perform such details as if fully and correctly set forth and described in the drawings and specifications.

(e) The work shall conform to the specifications and the contract drawings identified on the following index of drawings:

See Drawing File Index

(End of clause)

252.243-7001 PRICING OF CONTRACT MODIFICATIONS (DEC 1991)

When costs are a factor in any price adjustment under this contract, the contract cost principles and procedures in

FAR part 31 and DFARS part 231, in effect on the date of this contract, apply.

(End of clause)

SECTION 01 30 00

ADMINISTRATIVE REQUIREMENTS
11/20, CHG 2: 05/22

PART 1 GENERAL

1.1 REFERENCES

The publications listed below form a part of this specification to the extent referenced. The publications are referred to within the text by the basic designation only.

U.S. ARMY CORPS OF ENGINEERS (USACE)

EM 385-1-1	(2014) Safety -- Safety and Health Requirements Manual

1.2 SUBMITTALS

Government approval is required for submittals with a "G" or "S" classification. Submittals not having a "G" or "S" classification are for information only. When used, a code following the "G" classification identifies the office that will review the submittal for the Government. Submit the following in accordance with Section 01 33 00 SUBMITTAL PROCEDURES:

SD-01 Preconstruction Submittals

View Location Map

Progress and Completion Pictures

1.3 VIEW LOCATION MAP

Submit, prior to or with the first digital photograph submittals, a sketch or drawing indicating the required photographic locations. Update as required if the locations are moved.

1.4 PROGRESS AND COMPLETION PICTURES

Photographically document site conditions prior to start of construction operations. Provide monthly, and within one month of the completion of work, digital photographs, 1600x1200x24 bit true color minimum resolution in JPEG file format showing the sequence and progress of work. Take a minimum of 20 digital photographs each week throughout the entire project from a minimum of ten different viewpoints selected by the Contractor unless otherwise directed by the Contracting Officer. Submit with the monthly invoice two sets of digital photographs, each set on a separate compact disc (CD) or data versatile disc (DVD), cumulative of all photos to date. Indicate photographs demonstrating environmental procedures. Provide photographs for each month in a separate monthly directory and name each file to indicate its location on the view location sketch. Also provide the view location sketch on the CD or DVD as a digital file. Include a date designator in file names. Photographs provided are for unrestricted use by the Government.

1.5 MINIMUM INSURANCE REQUIREMENTS

Provide the minimum insurance coverage required by FAR 28.307-2 Liability, during the entire period of performance under this contract. Provide other insurance coverage as required by New Mexico law.

1.6 SUPERVISION

1.6.1 Superintendent Qualifications

Provide project superintendent with a minimum of 10 years experience in construction with at least 5 of those years as a superintendent on projects similar in size and complexity. The individual must be familiar with the requirements of EM 385-1-1 and have experience in the areas of hazard identification and safety compliance. The individual must be capable of interpreting a critical path schedule and construction drawings. The qualification requirements for the alternate superintendent are the same as for the project superintendent. The Contracting Officer may request proof of the superintendent's qualifications at any point in the project if the performance of the superintendent is in question.

1.6.2 Minimum Communication Requirements

Have at least one qualified superintendent, or competent alternate, capable of reading, writing, and conversing fluently in the English language, on the job-site at all times during the performance of Contract work.In addition, if a Quality Control (QC) representative is required on the Contract, then that individual must also have fluent English communication skills.

1.6.3 Duties

The project superintendent is primarily responsible for managing subcontractors and coordinating day-to-day production and schedule adherence on the project. The superintendent is required to attend partnering meetings, and quality control meetings. The superintendent or qualified alternative must be on-site at all times during the performance of this contract until the work is completed and accepted.

1.6.4 Non-Compliance Actions

The Project Superintendent is subject to removal by the Contracting Officer for non-compliance with requirements specified in the contract and for failure to manage the project to ensure timely completion. Furthermore, the Contracting Officer may issue an order stopping all or part of the work until satisfactory corrective action has been taken. No part of the time lost due to such stop orders is acceptable as the subject of claim for extension of time for excess costs or damages by the Contractor.

1.7 PRECONSTRUCTION CONFERENCE

Immediately after award, prior to commencing any work at the site, coordinate with the Contracting Officer a time and place to meet for the Preconstruction Conference. The conference must take place within 35 calendar days after award of the contract, but prior to commencement of any work at the site. The purpose of this conference is to discuss and develop a mutual understanding of the administrative requirements of the Contract including but not limited to: daily reporting, invoicing, value

engineering, safety, base-access, outage requests, hot work permits, schedule requirements, quality control, schedule of prices or earned value report, shop drawings, submittals, cybersecurity, prosecution of the work, government acceptance, final inspections and contract close-out. Contractor must present and discuss their basic approach to scheduling the construction work and any required phasing.

1.7.1 Attendees

Contractor attendees must include the Project Manager, Superintendent, Site Safety and Health Officer (SSHO), Quality Control Manager and major subcontractors.

1.8 PARTNERING

Contractor shall host the partnering session within 45 calendar days of contract award. To most effectively accomplish this Contract, the Contractor and Government must form a cohesive partnership with the common goal of drawing on the strength of each organization in an effort to achieve a successful project without safety mishaps, conforming to the Contract, within budget and on schedule. The partnering team must consist of personnel from both the Government and Contractor including project level and corporate level leadership positions. Key Personnel from the supported command, end user, , Contractor, key subcontractors and the Designer of Record are required to participate in the Partnering process.

1.9 MOBILIZATION

Contractor shall mobilize to the jobsite within 60 calendar days after contract award. Mobilize is defined as having equipment AND having a physical presence of at least one person from the contractor's team on the jobsite.

SECTION 01 33 00

SUBMITTAL PROCEDURES
08/18, CHG 4: 02/21

PART 1 GENERAL

1.1 SUMMARY

1.1.1 Submittal Information

The Contracting Officer may request submittals in addition to those specified when deemed necessary to adequately describe the work covered in the respective sections. Each submittal is to be complete and in sufficient detail to allow ready determination of compliance with contract requirements.

Units of weights and measures used on all submittals are to be the same as those used in the contract drawings.

1.1.2 Project Type

The Contractor's Quality Control (CQC) System Manager is to check and approve all items before submittal and stamp, sign, and date indicating action taken. Proposed deviations from the contract requirements are to be clearly identified. Include within submittals items such as: Contractor's, manufacturer's, or fabricator's drawings; descriptive literature including (but not limited to) catalog cuts, diagrams, operating charts or curves; test reports; test cylinders; samples; O&M manuals (including parts list); certifications; warranties; and other such required submittals.

1.1.3 Submission of Submittals

Schedule and provide submittals requiring Government approval before acquiring the material or equipment covered thereby. Pick up and dispose of samples not incorporated into the work in accordance with manufacturer's Safety Data Sheets (SDS) and in compliance with existing laws and regulations.

1.2 DEFINITIONS

1.2.1 Submittal Descriptions (SD)

Submittal requirements are specified in the technical sections. Examples and descriptions of submittals identified by the Submittal Description (SD) numbers and titles follow:

SD-01 Preconstruction Submittals

Submittals that are required prior to or at the start of construction (work) or the next major phase of the construction on a multiphase contract.

Preconstruction Submittals include schedules and a tabular list of locations, features, and other pertinent information regarding products, materials, equipment, or components to be used in the work.

Certificates Of Insurance

Surety Bonds

List Of Proposed Subcontractors

List Of Proposed Products

Baseline Network Analysis Schedule (NAS)

Submittal Register

Schedule Of Prices Or Earned Value Report

Accident Prevention Plan

Work Plan

Quality Control (QC) plan

Environmental Protection Plan

SD-02 Shop Drawings

Drawings, diagrams and schedules specifically prepared to illustrate some portion of the work.

Diagrams and instructions from a manufacturer or fabricator for use in producing the product and as aids to the Contractor for integrating the product or system into the project.

Drawings prepared by or for the Contractor to show how multiple systems and interdisciplinary work will be coordinated.

SD-03 Product Data

Catalog cuts, illustrations, schedules, diagrams, performance charts, instructions and brochures illustrating size, physical appearance and other characteristics of materials, systems or equipment for some portion of the work.

Samples of warranty language when the contract requires extended product warranties.

SD-04 Samples

Fabricated or unfabricated physical examples of materials, equipment or workmanship that illustrate functional and aesthetic characteristics of a material or product and establish standards by which the work can be judged.

Color samples from the manufacturer's standard line (or custom color samples if specified) to be used in selecting or approving colors for the project.

Field samples and mock-ups constructed on the project site establish standards ensuring work can be judged. Includes assemblies or portions of assemblies that are to be incorporated into the project and those that will be removed at conclusion of the work.

SD-06 Test Reports

Report signed by authorized official of testing laboratory that a material, product or system identical to the material, product or system to be provided has been tested in accord with specified requirements. Unless specified in another section, testing must have been within three years of date of contract award for the project.

Report that includes findings of a test required to be performed on an actual portion of the work or prototype prepared for the project before shipment to job site.

Report that includes finding of a test made at the job site or on sample taken from the job site, on portion of work during or after installation.

Investigation reports

Daily logs and checklists

Final acceptance test and operational test procedure

SD-07 Certificates

Statements printed on the manufacturer's letterhead and signed by responsible officials of manufacturer of product, system or material attesting that the product, system, or material meets specification requirements. Must be dated after award of project contract and clearly name the project.

Document required of Contractor, or of a manufacturer, supplier, installer or Subcontractor through Contractor. The document purpose is to further promote the orderly progression of a portion of the work by documenting procedures, acceptability of methods, or personnel qualifications.

Confined space entry permits

Text of posted operating instructions

SD-08 Manufacturer's Instructions

Preprinted material describing installation of a product, system or material, including special notices and (SDS)concerning impedances, hazards and safety precautions.

SD-10 Operation and Maintenance Data

Data provided by the manufacturer, or the system provider, including manufacturer's help and product line documentation, necessary to maintain and install equipment, for operating and maintenance use by facility personnel.

Data required by operating and maintenance personnel for the safe and efficient operation, maintenance and repair of the item.

Data incorporated in an operations and maintenance manual or control system.

SD-11 Closeout Submittals

Documentation to record compliance with technical or administrative requirements or to establish an administrative mechanism.

Submittals required for Guiding Principle Validation (GPV) or Third Party Certification (TPC).

Special requirements necessary to properly close out a construction contract. For example, Record Drawings and as-built drawings. Also, submittal requirements necessary to properly close out a major phase of construction on a multi-phase contract.

1.2.2 Approving Authority

Office or designated person authorized to approve the submittal.

1.2.3 Work

As used in this section, on-site and off-site construction required by contract documents, including labor necessary to produce submittals, construction, materials, products, equipment, and systems incorporated or to be incorporated in such construction. In exception, excludes work to produce SD-01 submittals.

1.3 SUBMITTALS

Government approval is required for submittals with a "G" or "S" classification. Submittals not having a "G" or “S” classification are for information only. When used, a code following the "G" classification identifies the office that will review the submittal for the Government. Submit the following in accordance with Section 01 33 00 SUBMITTAL PROCEDURES:

SD-01 Preconstruction Submittals

Submittal Register; G

1.4 SUBMITTAL CLASSIFICATION

1.4.1 Government Approved (G)

Government approval is required for extensions of design, critical materials, variations, equipment whose compatibility with the entire system must be checked, and other items as designated by the Government.

Within the terms of the Contract Clause SPECIFICATIONS AND DRAWINGS FOR CONSTRUCTION, submittals are considered to be "shop drawings."

1.4.2 For Information Only

Submittals not requiring Government approval will be for information only. Within the terms of the Contract Clause SPECIFICATIONS AND DRAWINGS FOR CONSTRUCTION, they are not considered to be "shop drawings."

1.5 PREPARATION

1.5.1 Transmittal Form

Use the ENG Form 4025-R transmittal form for submitting both Government-approved and information-only submittals. Submit in accordance with the instructions on the reverse side of the form. These forms or similar forms are included in the RMS CM software that the Contractor is required to use for this contract. Properly complete this form by filling out all the heading blank spaces and identifying each item submitted. Exercise special care to ensure proper listing of the specification paragraph and sheet number of the contract drawings pertinent to the data submitted for each item.

1.5.2 Submittal Format

1.5.2.1 Format of SD-01 Preconstruction Submittals

When the submittal includes a document that is to be used in the project, or is to become part of the project record, other than as a submittal, do not apply the Contractor's approval stamp to the document itself, but to a separate sheet accompanying the document.

Provide data in the unit of measure used in the contract documents.

1.5.2.2 Format for SD-02 Shop Drawings

Provide shop drawings not less than 8 1/2 by 11 inches nor more than 30 by 42 inches, except for full-size patterns or templates. Prepare drawings to accurate size, with scale indicated, unless another form is required. Ensure drawings are suitable for reproduction and of a quality to produce clear, distinct lines and letters, with dark lines on a white background.

a. Include the nameplate data, size, and capacity on drawings. Also include applicable federal, military, industry, and technical society publication references.

b. Dimension drawings, except diagrams and schematic drawings. Prepare drawings demonstrating interface with other trades to scale. Use the same unit of measure for shop drawings as indicated on the contract drawings. Identify materials and products for work shown.

Present shop drawings sized 8 1/2 by 11 inches as part of the bound volume for submittals. Present larger drawings in sets. Submit an electronic copy of drawings in PDF format.

1.5.2.2.1 Drawing Identification

Include on each drawing the drawing title, number, date, and revision numbers and dates, in addition to information required in paragraph IDENTIFYING SUBMITTALS.

Number drawings in a logical sequence. Each drawing is to bear the number of the submittal in a uniform location next to the title block. Place the Government contract number in the margin, immediately below the title block, for each drawing.

Reserve a blank space on the right-hand side of each sheet for the Government disposition stamp.

1.5.2.3 Format of SD-03 Product Data

Present product data submittals for each section as a complete, bound volume. Include a table of contents, listing the page and catalog item numbers for product data.

Indicate, by prominent notation, each product that is being submitted; indicate the specification section number and paragraph number to which it pertains.

1.5.2.3.1 Product Information

Supplement product data with material prepared for the project to satisfy the submittal requirements where product data does not exist. Identify this material as developed specifically for the project, with information and format as required for submission of SD-07 Certificates.

Provide product data in units used in the Contract documents. Where product data are included in preprinted catalogs with another unit, submit the dimensions in contract document units, on a separate sheet.

1.5.2.3.2 Standards

Where equipment or materials are specified to conform to industry or technical-society reference standards of such organizations as the American National Standards Institute (ANSI), ASTM International (ASTM), National Electrical Manufacturer's Association (NEMA), Underwriters Laboratories (UL), or Association of Edison Illuminating Companies (AEIC), submit proof of such compliance. The label or listing by the specified organization will be acceptable evidence of compliance. In lieu of the label or listing, submit a certificate from an independent testing organization, competent to perform testing, and approved by the Contracting Officer. State on the certificate that the item has been tested in accordance with the specified organization's test methods and that the item complies with the specified organization's reference standard.

1.5.2.3.3 Data Submission

Collect required data submittals for each specific material, product, unit of work, or system into a single submittal that is marked for choices, options, and portions applicable to the submittal. Mark each copy of the product data identically. Partial submittals will not be accepted for expedition of the construction effort.

Submit the manufacturer's instructions before installation.

1.5.2.4 Format of SD-04 Samples

1.5.2.4.1 Sample Characteristics

Furnish samples in the following sizes, unless otherwise specified or unless the manufacturer has prepackaged samples of approximately the same size as specified:

a. Sample of Equipment or Device: Full size.

b. Sample of Materials Less Than 2 by 3 inches: Built up to 8 1/2 by 11

inches.

c. Sample of Materials Exceeding 8 1/2 by 11 inches: Cut down to 8 1/2 by 11 inches and adequate to indicate color, texture, and material variations.

d. Sample of Linear Devices or Materials: 10 inch length or length to be supplied, if less than 10 inches. Examples of linear devices or materials are conduit and handrails.

e. Sample Volume of Nonsolid Materials: Pint. Examples of nonsolid materials are sand and paint.

f. Color Selection Samples: 2 by 4 inches. Where samples are specified for selection of color, finish, pattern, or texture, submit the full set of available choices for the material or product specified. Sizes and quantities of samples are to represent their respective standard unit.

g. Sample Panel: 4 by 4 feet.

h. Sample Installation: 100 square feet.

1.5.2.4.2 Sample Incorporation

Reusable Samples: Incorporate returned samples into work only if so specified or indicated. Incorporated samples are to be in undamaged condition at the time of use.

Recording of Sample Installation: Note and preserve the notation of any area constituting a sample installation, but remove the notation at the final clean-up of the project.

1.5.2.4.3 Comparison Sample

Samples Showing Range of Variation: Where variations in color, finish, pattern, or texture are unavoidable due to nature of the materials, submit sets of samples of not less than three units showing extremes and middle of range. Mark each unit to describe its relation to the range of the variation.

When color, texture, or pattern is specified by naming a particular manufacturer and style, include one sample of that manufacturer and style, for comparison.

1.5.2.5 Format of SD-05 Design Data

Provide design data and certificates on 8 1/2 by 11 inch paper. Provide a bound volume for submittals containing numerous pages.

1.5.2.6 Format of SD-06 Test Reports

Provide reports on 8 1/2 by 11 inch paper in a complete bound volume.

By prominent notation, indicate each report in the submittal. Indicate the specification number and paragraph number to which each report pertains.

1.5.2.7 Format of SD-07 Certificates

Provide design data and certificates on 8 1/2 by 11 inch paper. Provide a bound volume for submittals containing numerous pages.

1.5.2.8 Format of SD-08 Manufacturer's Instructions

Present manufacturer's instructions submittals for each section as a complete, bound volume. Include the manufacturer's name, trade name, place of manufacture, and catalog model or number on product data. Also include applicable federal, military, industry, and technical-society publication references. If supplemental information is needed to clarify the manufacturer's data, submit it as specified for SD-07 Certificates.

Submit the manufacturer's instructions before installation.

1.5.2.8.1 Standards

Where equipment or materials are specified to conform to industry or technical-society reference standards of such organizations as the American National Standards Institute (ANSI), ASTM International (ASTM), National Electrical Manufacturer's Association (NEMA), Underwriters Laboratories (UL), or Association of Edison Illuminating Companies (AEIC), submit proof of such compliance. The label or listing by the specified organization will be acceptable evidence of compliance. In lieu of the label or listing, submit a certificate from an independent testing organization, competent to perform testing, and approved by the Contracting Officer. State on the certificate that the item has been tested in accordance with the specified organization's test methods and that the item complies with the specified organization's reference standard.

1.5.2.9 Format of SD-09 Manufacturer's Field Reports

Provide reports on 8 1/2 by 11 inch paper in a complete bound volume.

By prominent notation, indicate each report in the submittal. Indicate the specification number and paragraph number to which each report pertains.

1.5.2.10 Format of SD-11 Closeout Submittals

When the submittal includes a document that is to be used in the project or is to become part of the project record, other than as a submittal, do not apply the Contractor's approval stamp to the document itself, but to a separate sheet accompanying the document.

Provide data in the unit of measure used in the contract documents.

1.5.3 Source Drawings for Shop Drawings

1.5.3.1 Source Drawings

The entire set of source drawing files (DWG) will not be provided to the Contractor. Request the specific Drawing Number for the preparation of shop drawings. Only those drawings requested to prepare shop drawings will be provided. These drawings are provided only after award.

1.5.3.2 Terms and Conditions

Data contained on these electronic files must not be used for any purpose other than as a convenience in the preparation of construction data for the referenced project. Any other use or reuse is at the sole risk of the Contractor and without liability or legal exposure to the Government. The Contractor must make no claim, and waives to the fullest extent permitted by law any claim or cause of action of any nature against the Government, its agents, or its subconsultants that may arise out of or in connection with the use of these electronic files. The Contractor must, to the fullest extent permitted by law, indemnify and hold the Government harmless against all damages, liabilities, or costs, including reasonable attorney's fees and defense costs, arising out of or resulting from the use of these electronic files.

These electronic source drawing files are not construction documents. Differences may exist between the source drawing files and the corresponding construction documents. The Government makes no representation regarding the accuracy or completeness of the electronic source drawing files, nor does it make representation to the compatibility of these files with the Contractor hardware or software. The Contractor is responsible for determining if any conflict exists. In the event that a conflict arises between the signed and sealed construction documents prepared by the Government and the furnished source drawing files, the signed and sealed construction documents govern. Use of these source drawing files does not relieve the Contractor of the duty to fully comply with the contract documents, including and without limitation the need to check, confirm and coordinate the work of all contractors for the project. If the Contractor uses, duplicates or modifies these electronic source drawing files for use in producing construction data related to this contract, remove all previous indication of ownership (seals, logos, signatures, initials and dates).

1.5.4 Electronic File Format

Provide submittals in electronic format, with the exception of material samples required for SD-04 Samples items. In addition to the electronic submittal, provide three hard copies of the submittals. Compile the submittal file as a single, complete document, to include the Transmittal Form described within. Name the electronic submittal file specifically according to its contents, and coordinate the file naming convention with the Contracting Officer. Electronic files must be of sufficient quality that all information is legible. Use PDF as the electronic format, unless otherwise specified or directed by the Contracting Officer. Generate PDF files from original documents with bookmarks so that the text included in the PDF file is searchable and can be copied. If documents are scanned, optical character resolution (OCR) routines are required. Index and bookmark files exceeding 30 pages to allow efficient navigation of the file. When required, the electronic file must include a valid electronic signature or a scan of a signature.

E-mail electronic submittal documents smaller than 10MB to an e-mail address as directed by the Contracting Officer. Provide electronic documents over 10 MB on an optical disc or through an electronic file sharing system such as the AMRDEC SAFE Web Application located at the following website: https://safe.amrdec.army.mil/safe/.

1.6 QUANTITY OF SUBMITTALS

1.6.1 Number of SD-01 Preconstruction Submittal Copies

Unless otherwise specified, submit two sets of administrative submittals.

1.6.2 Number of SD-02 Shop Drawing Copies

Submit six copies of submittals of shop drawings requiring review and approval by a QC organization. Submit seven copies of shop drawings requiring review and approval by the Contracting Officer.

1.6.3 Number of SD-03 Product Data Copies

Submit in compliance with quantity requirements specified for shop drawings.

1.6.4 Number of SD-04 Samples

a. Submit two samples, or two sets of samples showing the range of variation, of each required item. One approved sample or set of samples will be retained by the approving authority and one will be returned to the Contractor.

b. Submit one sample panel or provide one sample installation where directed. Include components listed in the technical section or as directed.

c. Submit one sample installation, where directed.

d. Submit one sample of nonsolid materials.

1.6.5 Number of SD-05 Design Data Copies

Submit in compliance with quantity requirements specified for shop drawings.

1.6.6 Number of SD-06 Test Report Copies

Submit in compliance with quantity and quality requirements specified for shop drawings, other than field test results that will be submitted with QC reports.

1.6.7 Number of SD-07 Certificate Copies

Submit in compliance with quantity requirements specified for shop drawings.

1.6.8 Number of SD-08 Manufacturer's Instructions Copies

Submit in compliance with quantity requirements specified for shop drawings.

1.6.9 Number of SD-09 Manufacturer's Field Report Copies

Submit in compliance with quantity and quality requirements specified for shop drawings other than field test results that will be submitted with QC reports.

1.6.10 Number of SD-10 Operation and Maintenance Data Copies

Submit five copies of O&M data to the Contracting Officer for review and approval.

1.6.11 Number of SD-11 Closeout Submittals Copies

Unless otherwise specified, submit two sets of administrative submittals.

1.7 INFORMATION ONLY SUBMITTALS

Submittals without a "G" designation must be certified by the QC manager and submitted to the Contracting Officer for information-only. Provide information-only submittals to the Contracting Officer a minimum of 14 calendar days prior to the Preparatory Meeting for the associated Definable Feature of Work (DFOW). Approval of the Contracting Officer is not required on information only submittals. The Contracting Officer will mark "receipt acknowledged" on submittals for information and will return only the transmittal cover sheet to the Contractor. Normally, submittals for information only will not be returned. However, the Government reserves the right to return unsatisfactory submittals and require the Contractor to resubmit any item found not to comply with the contract. This does not relieve the Contractor from the obligation to furnish material conforming to the plans and specifications; will not prevent the Contracting Officer from requiring removal and replacement of nonconforming material incorporated in the work; and does not relieve the Contractor of the requirement to furnish samples for testing by the Government laboratory or for check testing by the Government in those instances where the technical specifications so prescribe.

1.8 PROJECT SUBMITTAL REGISTER

A sample Project Submittal Register showing items of equipment and materials for when submittals are required by the specifications is provided as "Appendix A - Submittal Register."

1.8.1 Submittal Management

Prepare and maintain a submittal register, as the work progresses. Do not change data that is output in columns (c), (d), (e), and (f) as delivered by Government; retain data that is output in columns (a), (g), (h), and (i) as approved. As an attachment, provide a submittal register showing items of equipment and materials for which submittals are required by the specifications. This list may not be all-inclusive and additional submittals may be required. Maintain a submittal register for the project in accordance with Section 01 45 00.15 10 RESIDENT MANAGEMENT SYSTEM CONTRACTOR MODE(RMS CM). The Government will provide the initial submittal register in electronic format with the following fields completed, to the extent that will be required by the Government during subsequent usage.

Column (c): Lists specification section in which submittal is required.

Column (d): Lists each submittal description (SD Number. and type, e.g., SD-02 Shop Drawings) required in each specification section.

Column (e): Lists one principal paragraph in each specification

section where a material or product is specified. This listing is only to facilitate locating submitted requirements. Do not consider entries in column (e) as limiting the project requirements.

Thereafter, the Contractor is to track all submittals by maintaining a complete list, including completion of all data columns and all dates on which submittals are received by and returned by the Government.

1.8.2 Preconstruction Use of Submittal Register

Submit the submittal register. Include the QC plan and the project schedule. Verify that all submittals required for the project are listed and add missing submittals. Coordinate and complete the following fields on the register submitted with the QC plan and the project schedule:

Column (a) Activity Number: Activity number from the project schedule.

Column (g) Contractor Submit Date: Scheduled date for the approving authority to receive submittals.

Column (h) Contractor Approval Date: Date that Contractor needs approval of submittal.

Column (i) Contractor Material: Date that Contractor needs material delivered to Contractor control.

1.8.3 Contractor Use of Submittal Register

Update the following fields in the Government-furnished submittal register program or equivalent fields in the program used by the Contractor with each submittal throughout the contract.

Column (b) Transmittal Number: List of consecutive, Contractor-assigned numbers.

Column (j) Action Code (k): Date of action used to record Contractor's review when forwarding submittals to QC.

Column (l) Date submittal transmitted.

Column (q) Date approval was received.

1.8.4 Approving Authority Use of Submittal Register

Update the following fields:

Column (b) Transmittal Number: List of consecutive, Contractor-assigned numbers.

Column (l) Date submittal was received.

Column (m) through (p) Dates of review actions.

Column (q) Date of return to Contractor.

1.8.5 Action Codes

1.8.5.1 Contractor Action Codes

DESIGN BID BUILD SUBMITTALS			
Submittal Classifications shown in UFGS Sections	Submittal Classification	Corresponding SpecsIntact Submittal Register Code which is populated in the SI Submittal Register. G	Submittal requires Government Approval	G	GA
BLANK	Submittal is For Information Only (FIO)	BLANK	FIO
S	Submittal is for documentation of Sustainable requirements	S	S/FIO

1.8.6 Delivery of Copies

Submit an updated electronic copy of the submittal register to the Contracting Officer with each invoice request. Provide an updated Submittal Register monthly regardless of whether an invoice is submitted.

1.9 VARIATIONS

Variations from contract requirements require Contracting Officer approval pursuant to contract Clause FAR 52.236-21 Specifications and Drawings for Construction, and will be considered where advantageous to the Government.

1.9.1 Considering Variations

Discussion of variations with the Contracting Officer before submission will help ensure that functional and quality requirements are met and minimize rejections and resubmittals. For variations that include design changes or some material or product substitutions, the Government may require an evaluation and analysis by a licensed professional engineer hired by the contractor.

Specifically point out variations from contract requirements in a transmittal letter. Failure to point out variations may cause the Government to require rejection and removal of such work at no additional cost to the Government.

1.9.2 Proposing Variations

Specifically point out variations from contract requirements in a transmittal letter. Failure to point out variations may cause the Government to require rejection and removal of such work at no additional cost to the Government.

Check the column "variation" of ENG Form 4025 for submittals that include variations proposed by the Contractor. Set forth in writing the reason for any variations and note such variations on the submittal. The Government reserves the right to rescind inadvertent approval of submittals containing unnoted variations.

1.9.3 Warranting that Variations are Compatible

When delivering a variation for approval, the Contractor warrants that this contract has been reviewed to establish that the variation, if incorporated, will be compatible with other elements of work.

1.9.4 Review Schedule Extension

In addition to the normal submittal review period, a period of 14 calendar days will be allowed for the Government to consider submittals with variations.

1.10 SCHEDULING

Schedule and submit concurrently product data and shop drawings covering component items forming a system or items that are interrelated. Submit pertinent certifications at the same time. No delay damages or time extensions will be allowed for time lost in late submittals. Allow an additional 15 calendar days for review and approval of submittals for food service equipment and refrigeration and HVAC control systems.

a. Coordinate scheduling, sequencing, preparing, and processing of submittals with performance of work so that work will not be delayed by submittal processing. The Contractor is responsible for additional time required for Government reviews resulting from required resubmittals. The review period for each resubmittal is the same as for the initial submittal.

b. Submittals required by the contract documents are listed on the submittal register. If a submittal is listed in the submittal register but does not pertain to the contract work, the Contractor is to include the submittal in the register and annotate it "N/A" with a brief explanation. Approval by the Contracting Officer does not relieve the Contractor of supplying submittals required by the contract documents but that have been omitted from the register or marked "N/A."

c. Resubmit the submittal register and annotate it monthly with actual submission and approval dates. When all items on the register have been fully approved, no further resubmittal is required.

Contracting Officer review will be completed within 30 calendar days after the date of submission.

1.11 GOVERNMENT APPROVING AUTHORITY

When the approving authority is the Contracting Officer, the Government will:

a. Note the date on which the submittal was received.

b. Review submittals for approval within the scheduling period specified and only for conformance with project design concepts and compliance with contract documents.

c. Identify returned submittals with one of the actions defined in paragraph REVIEW NOTATIONS and with comments and markings appropriate for the action indicated.

Upon completion of review of submittals requiring Government approval, stamp and date submittals. Three copies of the submittal will be retained by the Contracting Officer and 1 copy of the submittal will be returned to the Contractor.

1.11.1 Review Notations

Submittals will be returned to the Contractor with the following notations:

a. Submittals marked "approved" or "accepted" authorize proceeding with the work covered.

b. Submittals marked "approved as noted" or "approved, except as noted, resubmittal not required," authorize proceeding with the work covered provided that the Contractor takes no exception to the corrections.

c. Submittals marked "not approved," "disapproved," or "revise and resubmit" indicate incomplete submittal or noncompliance with the contract requirements or design concept. Resubmit with appropriate changes. Do not proceed with work for this item until the resubmittal is approved.

d. Submittals marked "not reviewed" indicate that the submittal has been previously reviewed and approved, is not required, does not have evidence of being reviewed and approved by Contractor, or is not complete. A submittal marked "not reviewed" will be returned with an explanation of the reason it is not reviewed. Resubmit submittals returned for lack of review by Contractor or for being incomplete, with appropriate action, coordination, or change.

e. Submittals marked "receipt acknowledged" indicate that submittals have been received by the Government. This applies only to "information-only submittals" as previously defined.

1.12 DISAPPROVED SUBMITTALS

Make corrections required by the Contracting Officer. If the Contractor considers any correction or notation on the returned submittals to constitute a change to the contract drawings or specifications, give notice to the Contracting Officer as required under the FAR clause titled CHANGES. The Contractor is responsible for the dimensions and design of connection details and the construction of work. Failure to point out variations may cause the Government to require rejection and removal of such work at the Contractor's expense.

If changes are necessary to submittals, make such revisions and resubmit in accordance with the procedures above. No item of work requiring a submittal change is to be accomplished until the changed submittals are approved.

1.13 APPROVED SUBMITTALS

The Contracting Officer's approval of submittals is not to be construed as a complete check, and indicates only that

Approval or acceptance by the Government for a submittal does not relieve the Contractor of the responsibility for meeting the contract requirements or for any error that may exist, because under the Quality Control (QC) requirements of this contract, the Contractor is responsible for ensuring information contained with in each submittal accurately conforms with the requirements of the contract documents.

After submittals have been approved or accepted by the Contracting Officer, no resubmittal for the purpose of substituting materials or equipment will be considered unless accompanied by an explanation of why a substitution is necessary.

1.14 APPROVED SAMPLES

Approval of a sample is only for the characteristics or use named in such approval and is not be construed to change or modify any contract requirements. Before submitting samples, provide assurance that the materials or equipment will be available in quantities required in the project. No change or substitution will be permitted after a sample has been approved.

Match the approved samples for materials and equipment incorporated in the work. If requested, approved samples, including those that may be damaged in testing, will be returned to the Contractor, at its expense, upon completion of the contract. Unapproved samples will also be returned to the Contractor at its expense, if so requested.

Failure of any materials to pass the specified tests will be sufficient cause for refusal to consider, under this contract, any further samples of the same brand or make as that material. The Government reserves the right to disapprove any material or equipment that has previously proved unsatisfactory in service.

Samples of various materials or equipment delivered on the site or in place may be taken by the Contracting Officer for testing. Samples failing to meet contract requirements will automatically void previous approvals. Replace such materials or equipment to meet contract requirements.

1.15 WITHHOLDING OF PAYMENT

Payment for materials incorporated in the work will not be made if required approvals have not been obtained.

1.16 CERTIFICATION OF SUBMITTAL DATA

Certify the submittal data as follows on Form ENG 4025: "I certify that the above submitted items had been reviewed in detail and are correct and

in strict conformance with the contract drawings and specifications except as otherwise stated.

1.2 DEFINITIONS

1.2.1 Competent Person (CP)

The CP is a person designated in writing, who, through training, knowledge and experience, is capable of identifying, evaluating, and addressing existing and predictable hazards in the working environment or working conditions that are dangerous to personnel, and who has authorization to take prompt corrective measures with regards to such hazards.

1.2.2 Competent Person, Confined Space

The CP, Confined Space, is a person meeting the competent person requirements as defined EM 385-1-1 Appendix Q, with thorough knowledge of OSHA's Confined Space Standard, 29 CFR 1910.146, and designated in writing to be responsible for the immediate supervision, implementation and monitoring of the confined space program, who through training, knowledge and experience in confined space entry is capable of identifying, evaluating and addressing existing and potential confined space hazards and, who has the authority to take prompt corrective measures with regard to such hazards.

1.2.3 Competent Person, Cranes and Rigging

The CP, Cranes and Rigging, as defined in EM 385-1-1 Appendix Q, is a person meeting the competent person, who has been designated in writing to be responsible for the immediate supervision, implementation and monitoring of the Crane and Rigging Program, who through training, knowledge and experience in crane and rigging is capable of identifying, evaluating and addressing existing and potential hazards and, who has the authority to take prompt corrective measures with regard to such hazards.

1.2.4 Competent Person, Excavation/Trenching

A CP, Excavation/Trenching, is a person meeting the competent person requirements as defined in EM 385-1-1 Appendix Q and 29 CFR 1926, who has been designated in writing to be responsible for the immediate supervision, implementation and monitoring of the excavation/trenching program, who through training, knowledge and experience in excavation/trenching is capable of identifying, evaluating and addressing existing and potential hazards and, who has the authority to take prompt corrective measures with regard to such hazards.

1.2.5 Competent Person, Fall Protection

The CP, Fall Protection, is a person meeting the competent person requirements as defined in EM 385-1-1 Appendix Q and in accordance with ASSP Z359.0, who has been designated in writing by the employer to be responsible for immediate supervising, implementing and monitoring of the fall protection program, who through training, knowledge and experience in fall protection and rescue systems and equipment, is capable of identifying, evaluating and addressing existing and potential fall hazards and, who has the authority to take prompt corrective measures with regard to such hazards.

1.2.6 Competent Person, Scaffolding

The CP, Scaffolding is a person meeting the competent person requirements in EM 385-1-1 Appendix Q, and designated in writing by the employer to be responsible for immediate supervising, implementing and monitoring of the scaffolding program. The CP for Scaffolding has enough training, knowledge and experience in scaffolding to correctly identify, evaluate and address existing and potential hazards and also has the authority to take prompt corrective measures with regard to these hazards. CP qualifications must be documented including experience on the specific scaffolding systems/types being used, assessment of the base material that the scaffold will be erected upon, load calculations for materials and personnel, and erection and dismantling. The CP for scaffolding must have a documented minimum of 8-hours of scaffold training to include training on the specific type of scaffold being used (e.g. mast-climbing, adjustable, tubular frame), in accordance with EM 385-1-1 Section 22.B.02.

1.2.7 Competent Person (CP) Trainer

A competent person trainer as defined in EM 385-1-1 Appendix Q, who is qualified in the training material presented, and who possesses a working knowledge of applicable technical regulations, standards, equipment and systems related to the subject matter on which they are training Competent Persons. A competent person trainer must be familiar with the typical hazards and the equipment used in the industry they are instructing. The training provided by the competent person trainer must be appropriate to that specific industry. The competent person trainer must evaluate the knowledge and skills of the competent persons as part of the training process.

1.2.8 High Risk Activities

High Risk Activities are activities that involve work at heights, crane and rigging, excavations and trenching, scaffolding, electrical work, and confined space entry.

1.2.9 High Visibility Accident

A High Visibility Accident is any mishap which may generate publicity or high visibility.

1.2.10 Load Handling Equipment (LHE)

LHE is a term used to describe cranes, hoists and all other hoisting equipment (hoisting equipment means equipment, including crane, derricks, hoists and power operated equipment used with rigging to raise, lower or horizontally move a load).

1.2.11 Medical Treatment

Medical Treatment is treatment administered by a physician or by registered professional personnel under the standing orders of a physician. Medical treatment does not include first aid treatment even when provided by a physician or registered personnel.

1.2.12 Near Miss

A Near Miss is a mishap resulting in no personal injury and zero property damage, but given a shift in time or position, damage or injury may have

occurred (e.g., a worker falls off a scaffold and is not injured; a crane swings around to move the load and narrowly misses a parked vehicle).

1.2.13 Operating Envelope

The Operating Envelope is the area surrounding any crane or load handling equipment. Inside this "envelope" is the crane, the operator, riggers and crane walkers, other personnel involved in the operation, rigging gear between the hook, the load, the crane's supporting structure (i.e. ground or rail), the load's rigging path, the lift and rigging procedure.

1.2.14 Qualified Person (QP)

The QP is a person designated in writing, who, by possession of a recognized degree, certificate, or professional standing, or extensive knowledge, training, and experience, has successfully demonstrated their ability to solve or resolve problems related to the subject matter, the work, or the project.

1.2.15 Qualified Person, Fall Protection (QP for FP)

A QP for FP is a person meeting the definition requirements of EM 385-1-1 Appendix Q, and ASSP Z359.2 standard, having a recognized degree or professional certificate and with extensive knowledge, training and experience in the fall protection and rescue field who is capable of designing, analyzing, and evaluating and specifying fall protection and rescue systems.

1.2.16 Recordable Injuries or Illnesses

Recordable Injuries or Illnesses are any work-related injury or illness that results in:

a. Death, regardless of the time between the injury and death, or the length of the illness;

b. Days away from work (any time lost after day of injury/illness onset);

c. Restricted work;

d. Transfer to another job;

e. Medical treatment beyond first aid;

f. Loss of consciousness; or

g. A significant injury or illness diagnosed by a physician or other licensed health care professional, even if it did not result in (a) through (f) above

1.2.17 Government Property and Equipment

Interpret "USACE" property and equipment specified in USACE EM 385-1-1 as Government property and equipment.

1.2.18 Load Handling Equipment (LHE) Accident or Load Handling Equipment Mishap

A LHE accident occurs when any one or more of the eight elements in the

operating envelope fails to perform correctly during operation, including operation during maintenance or testing resulting in personnel injury or death; material or equipment damage; dropped load; derailment; two-blocking; overload; or collision, including unplanned contact between the load, crane, or other objects. A dropped load, derailment, two-blocking, overload and collision are considered accidents, even though no material damage or injury occurs. A component failure (e.g., motor burnout, gear tooth failure, bearing failure) is not considered an accident solely due to material or equipment damage unless the component failure results in damage to other components (e.g., dropped boom, dropped load, or roll over). Document an LHE mishap using the Crane High Hazard working group mishap reporting form.

1.3 SUBMITTALS

Government approval is required for submittals with a "G" or "S" classification. Submittals not having a "G" or "S" classification are for information only. When used, a code following the "G" classification identifies the office that will review the submittal for the Government. Submit the following in accordance with Section 01 33 00 SUBMITTAL PROCEDURES:

SD-01 Preconstruction Submittals

Accident Prevention Plan (APP); G

SD-06 Test Reports

Monthly Exposure Reports

Notifications and Reports

Accident Reports; G

LHE Inspection Reports

SD-07 Certificates

Crane Operators/Riggers

Standard Lift Plan; G

Critical Lift Plan; G

Activity Hazard Analysis (AHA)

Confined Space Entry Permit

Hot Work Permit

Certificate of Compliance

License Certificates

Portable Gauge Operations Planning Worksheet; G

1.4 MONTHLY EXPOSURE REPORTS

Provide a Monthly Exposure Report and attach to the monthly billing

request. This report is a compilation of employee-hours worked each month for all site workers, both Prime and subcontractor. Failure to submit the report may result in retention of up to 10 percent of the voucher.

1.5 REGULATORY REQUIREMENTS

In addition to the detailed requirements included in the provisions of this Contract, comply with the most recent edition of USACE EM 385-1-1, and the following federal, state, and local laws, ordinances, criteria, rules and regulations. Submit matters of interpretation of standards to the appropriate administrative agency for resolution before starting work. Where the requirements of this specification, applicable laws, criteria, ordinances, regulations, and referenced documents vary, the most stringent requirements govern.

1.6 SITE QUALIFICATIONS, DUTIES, AND MEETINGS

1.6.1 Personnel Qualifications

1.6.1.1 Site Safety and Health Officer (SSHO)

Provide an SSHO that meets the requirements of EM 385-1-1 Section 1. The SSHO must ensure that the requirements of 29 CFR 1926.16 are met for the project. Provide a Safety oversight team that includes a minimum of one person at each project site to function as the Site Safety and Health Officer (SSHO). The SSHO or an equally-qualified Alternate SSHO must be at the work site at all times to implement and administer the Contractor's safety program and Government-accepted Accident Prevention Plan. The SSHO and Alternate SSHO must have the required training, experience, and qualifications in accordance with EM 385-1-1 Section 01.A.17, and all associated sub-paragraphs.

If the SSHO is off-site for a period longer than 24 hours, an equally-qualified alternate SSHO must be provided and must fulfill the same roles and responsibilities as the primary SSHO. When the SSHO is temporarily (up to 24 hours) off-site, a Designated Representative (DR), as identified in the AHA may be used in lieu of an Alternate SSHO, and must be on the project site at all times when work is being performed. Note that the DR is a collateral duty safety position, with safety duties in addition to their full time occupation.

1.6.1.1.1 Additional Site Safety and Health Officer (SSHO) Requirements and Duties

The SSHO may not serve as the Quality Control Manager. The SSHO may not serve as the Superintendent.

1.6.1.2 Competent Person Qualifications

Provide Competent Persons in accordance with EM 385-1-1, Appendix Q and herein. Competent Persons for high risk activities include confined space, cranes and rigging, excavation/trenching, fall protection, and electrical work. The CP for these activities must be designated in writing, and meet the requirements for the specific activity (i.e. competent person, fall protection).

The Competent Person identified in the Contractor's Safety and Health Program and accepted Accident Prevention Plan, must be on-site at all times when the work that presents the hazards associated with their

professional expertise is being performed. Provide the credentials of the Competent Persons(s) to the Contracting Officer for information in consultation with the Safety Office.

1.6.1.2.1 Competent Person for Confined Space Entry

Provide a Confined Space (CP) Competent Person who meets the requirements of EM 385-1-1, Appendix Q, and herein. The CP for Confined Space Entry must supervise the entry into each confined space in accordance with EM 385-1-1, Section 34.

1.6.1.2.2 Competent Person for Scaffolding

Provide a Competent Person for Scaffolding who meets the requirements of EM 385-1-1, Section 22.B.02 and herein.

1.6.1.2.3 Competent Person for Fall Protection

Provide a Competent Person for Fall Protection who meets the requirements of EM 385-1-1, Section 21.C.04, 21.B.03, and herein.

1.6.1.3 Qualified Trainer Requirements

Individuals qualified to instruct the 40 hour contract safety awareness course, or portions thereof, must meet the definition of a Competent Person Trainer, and, at a minimum, possess a working knowledge of the following subject areas: EM 385-1-1, Electrical Standards, Lockout/Tagout, Fall Protection, Confined Space Entry for Construction; Excavation, Trenching and Soil Mechanics, and Scaffolds in accordance with 29 CFR 1926.450, Subpart L.

Instructors are required to:

a. Prepare class presentations that cover construction-related safety requirements.

b. Ensure that all attendees attend all sessions by using a class roster signed daily by each attendee. Maintain copies of the roster for at least five years. This is a certification class and must be attended 100 percent. In cases of emergency where an attendee cannot make it to a session, the attendee can make it up in another class session for the same subject.

c. Update training course materials whenever an update of the EM 385-1-1 becomes available.

d. Provide a written exam of at least 50 questions. Students are required to answer 80 percent correctly to pass.

e. Request, review and incorporate student feedback into a continuous course improvement program.

1.6.1.4 Crane Operators/Riggers

Provide Operators, Signal Persons, and Riggers meeting the requirements in EM 385-1-1, Section 15.B for Riggers and Section 16.B for Crane Operators and Signal Persons. In addition, for mobile cranes with Original Equipment Manufacturer (OEM) rated capacities of 50,000 pounds or greater, designate crane operators qualified by a source that qualifies crane

operators (i.e., union, a Government agency, or an organization that tests and qualifies crane operators). Provide proof of current qualification.

1.6.2 Personnel Duties

1.6.2.1 Duties of the Site Safety and Health Officer (SSHO)

The SSHO must:

a. Conduct daily safety and health inspections and maintain a written log which includes area/operation inspected, date of inspection, identified hazards, recommended corrective actions, estimated and actual dates of corrections. Attach safety inspection logs to the Contractors' daily production report.

b. Conduct mishap investigations and complete required accident reports. Report mishaps and near misses.

c. Use and maintain OSHA's Form 300 to log work-related injuries and illnesses occurring on the project site for Prime Contractors and subcontractors, and make available to the Contracting Officer upon request. Post and maintain the Form 300A on the site Safety Bulletin Board.

d. Maintain applicable safety reference material on the job site.

e. Attend the pre-construction conference, pre-work meetings including preparatory meetings, and periodic in-progress meetings.

f. Review the APP and AHAs for compliance with EM 385-1-1, and approve, sign, implement and enforce them.

g. Establish a Safety and Occupational Health (SOH) Deficiency Tracking System that lists and monitors outstanding deficiencies until resolution.

h. Ensure subcontractor compliance with safety and health requirements.

i. Maintain a list of hazardous chemicals on site and their material Safety Data Sheets (SDS).

j. Maintain a weekly list of high hazard activities involving energy, equipment, excavation, entry into confined space, and elevation, and be prepared to discuss details during QC Meetings.

k. Provide and keep a record of site safety orientation and indoctrination for Contractor employees, subcontractor employees, and site visitors.

Superintendent, QC Manager, and SSHO are subject to dismissal if the above or any other required duties are not being effectively carried out. If either the Superintendent, QC Manager, or SSHO are dismissed, project work will be stopped and will not be allowed to resume until a suitable replacement is approved and the above duties are again being effectively carried out.

1.6.3 Meetings

1.6.3.1 Preconstruction Conference

a. Contractor representatives who have a responsibility or significant role in accident prevention on the project must attend the preconstruction conference. This includes the project superintendent, Site Safety and Occupational Health Officer, quality control manager, or any other assigned safety and health professionals who participated in the development of the APP (including the Activity Hazard Analyses (AHAs) and special plans, program and procedures associated with it).

b. Discuss the details of the submitted APP to include incorporated plans, programs, procedures and a listing of anticipated AHAs that will be developed and implemented during the performance of the Contract. This list of proposed AHAs will be reviewed and an agreement will be reached between the Contractor and the Contracting Officer as to which phases will require an analysis. In addition, establish a schedule for the preparation, submittal, and Government review of AHAs to preclude project delays.

c. Deficiencies in the submitted APP, identified during the Contracting Officer's review, must be corrected, and the APP re-submitted for review prior to the start of construction. Work is not permitted to begin until an APP is established that is acceptable to the Contracting Officer.

1.6.3.2 Safety Meetings

Conduct safety meetings to review past activities, plan for new or changed operations, review pertinent aspects of appropriate AHA (by trade), establish safe working procedures for anticipated hazards, and provide pertinent Safety and Occupational Health (SOH) training and motivation. Conduct meetings at least once a month for all supervisors at the project location. The SSHO, supervisors, foremen, or CDSOs must conduct meetings at least once a week for the trade workers. Document meeting minutes to include the date, persons in attendance, subjects discussed, and names of individual(s) who conducted the meeting. Maintain documentation on-site and furnish copies to the Contracting Officer on request. Notify the Contracting Officer of all scheduled meetings 7 calendar days in advance.

1.7 ACCIDENT PREVENTION PLAN (APP)

1.7.1 APP - Construction

A qualified person must prepare the written site-specific APP. Prepare the APP in accordance with the format and requirements of EM 385-1-1, Appendix A, and as supplemented herein. Cover all paragraph and subparagraph elements in EM 385-1-1, Appendix A. The APP must be job-specific and address any unusual or unique aspects of the project or activity for which it is written. The APP must interface with the Contractor's overall safety and health program referenced in the APP in the applicable APP element, and made site-specific. Describe the methods to evaluate past safety performance of potential subcontractors in the selection process. Also, describe innovative methods used to ensure and monitor safe work practices of subcontractors. The Government considers the Prime Contractor to be the "controlling authority" for all work site safety and health of the subcontractors. Contractors are responsible for informing their subcontractors of the safety provisions under the terms of

the Contract and the penalties for noncompliance, coordinating the work to prevent one craft from interfering with or creating hazardous working conditions for other crafts, and inspecting subcontractor operations to ensure that accident prevention responsibilities are being carried out. The APP must be signed by an officer of the firm (Prime Contractor senior person), the individual preparing the APP, the on-site superintendent, the designated SSHO, the Contractor Quality Control Manager, and any designated Certified Safety Professional (CSP) or Certified Health Physicist (CIH). The SSHO must provide and maintain the APP and a log of signatures by each subcontractor foreman, attesting that they have read and understand the APP, and make the APP and log available on-site to the Contracting Officer. If English is not the foreman's primary language, the Prime Contractor must provide an interpreter.

Submit the APP to the Contracting Officer 15 calendar days prior to the date of the preconstruction conference for acceptance. Work cannot proceed without an accepted APP. Once reviewed and accepted by the Contracting Officer, the APP and attachments will be enforced as part of the Contract. Disregarding the provisions of this Contract or the accepted APP is cause for stopping of work, at the discretion of the Contracting Officer, until the matter has been rectified. Continuously review and amend the APP, as necessary, throughout the life of the Contract. Changes to the accepted APP must be made with the knowledge and concurrence of the Contracting Officer, project superintendent, SSHO and Quality Control Manager. Incorporate unusual or high-hazard activities not identified in the original APP as they are discovered. Should any severe hazard exposure (i.e. imminent danger) become evident, stop work in the area, secure the area, and develop a plan to remove the exposure and control the hazard. Notify the Contracting Officer within 24 hours of discovery. Eliminate and remove the hazard. In the interim, take all necessary action to restore and maintain safe working conditions in order to safeguard onsite personnel, visitors, the public (as defined by ASSP A10.34), and the environment.

1.7.2 Names and Qualifications

Provide plans in accordance with the requirements outlined in Appendix A of EM 385-1-1, including the following:

a. Names and qualifications (resumes including education, training, experience and certifications) of site safety and health personnel designated to perform work on this project to include the designated Site Safety and Health Officer and other competent and qualified personnel to be used. Specify the duties of each position.

b. Qualifications of competent and of qualified persons. As a minimum, designate and submit qualifications of competent persons for each of the following major areas: excavation; scaffolding; fall protection; hazardous energy; confined space; health hazard recognition, evaluation and control of chemical, physical and biological agents; and personal protective equipment and clothing to include selection, use and maintenance.

1.7.3 Plans

Provide plans in the APP in accordance with the requirements outlined in Appendix A of EM 385-1-1, including the following:

1.7.3.1 COVID-19 Monitoring Plan

Include a site specific COVID-19 monitoring plan which addresses at a minimum the following elements:

a. Procedures for periodic sanitation inspections.

b. Procedures for disinfecting project site to include high traffic areas in accordance with Center for Disease Control (CDC) guidelines.

c. Site specific measures to practice social distancing while working on the project, where practicable.

d. Employee training on the signs, symptoms, and protection measures in accordance with CDC guidelines.

e. Follow current published best practices by CDC, World Health Organization, and OSHA:

(1) www.coronavirus.gov

(2) www.cdc.gov/coronavirus

(3) https://www.osha.gov/SLTC/covid-19/

f. Where more stringent federal, state, and local government COVID recommendations exist, the most stringent practice may apply.

1.7.3.2 Confined Space Entry Plan

Develop a confined or enclosed space entry plan in accordance with EM 385-1-1, applicable OSHA standards 29 CFR 1910, and 29 CFR 1926, OSHA Directive CPL 2.100, and any other federal, state and local regulatory requirements identified in this Contract. Identify the qualified person's name and qualifications, training, and experience. Delineate the qualified person's authority to direct work stoppage in the event of hazardous conditions. Include procedure for rescue by Contractor personnel and the coordination with emergency responders. (If there is no confined space work, include a statement that no confined space work exists and none will be created.)

1.7.3.3 Standard Lift Plan (SLP)

Plan lifts to avoid situations where the operator cannot maintain safe control of the lift. Prepare a written SLP in accordance with EM 385-1-1, Section 16.A.03, using Form 16-2 for every lift or series of lifts (if duty cycle or routine lifts are being performed). The SLP must be developed, reviewed and accepted by all personnel involved in the lift in conjunction with the associated AHA. Signature on the AHA constitutes acceptance of the plan. Maintain the SLP on the LHE for the current lift(s) being made. Maintain historical SLPs for a minimum of three months.

1.7.3.4 Critical Lift Plan - Crane or Load Handling Equipment

Provide a Critical Lift Plan as required by EM 385-1-1, Section 16.H.01, using Form 16-3. In addition, Critical Lift Plans are required for the following:

a. When working around energized power lines where the work will get closer than the minimum clearance distance in EM 385-1-1 Table 16-1.

b. For lifts with anticipated binding conditions.

c. When erecting cranes.

1.7.3.4.1 Critical Lift Plan Planning and Schedule

Critical lifts require detailed planning and additional or unusual safety precautions. Develop and submit a critical lift plan to the Contracting Officer 30 calendar days prior to critical lift. Comply with load testing requirements in accordance with EM 385-1-1, Section 16.F.03.

1.7.3.4.2 Lifts of Personnel

In addition to the requirements of EM 385-1-1, Section 16.H.02, for lifts of personnel, demonstrate compliance with the requirements of 29 CFR 1926.1400 and EM 385-1-1, Section 16.T.

1.7.3.5 Multi-Purpose Machines, Material Handling Equipment, and Construction Equipment Lift Plan

Multi-purpose machines, material handling equipment, and construction equipment used to lift loads that are suspended by rigging gear, require proof of authorization from the machine OEM that the machine is capable of making lifts of loads suspended by rigging equipment. Written approval from a qualified registered professional engineer, after a safety analysis is performed, is allowed in lieu of the OEM's approval. Demonstrate that the operator is properly trained and that the equipment is properly configured to make such lifts and is equipped with a load chart.

1.7.3.6 Fall Protection and Prevention (FP&P) Plan

The plan must be in accordance with the requirements of EM 385-1-1, Section 21.D and ASSP Z359.2, be site specific, and address all fall hazards in the work place and during different phases of construction. Address how to protect and prevent workers from falling to lower levels when they are exposed to fall hazards above 6 feet. A competent person or qualified person for fall protection must prepare and sign the plan documentation. Include fall protection and prevention systems, equipment and methods employed for every phase of work, roles and responsibilities, assisted rescue, self-rescue and evacuation procedures, training requirements, and monitoring methods. Review and revise, as necessary, the Fall Protection and Prevention Plan documentation as conditions change, but at a minimum every six months, for lengthy projects, reflecting any changes during the course of construction due to changes in personnel, equipment, systems or work habits. Keep and maintain the accepted Fall Protection and Prevention Plan documentation at the job site for the duration of the project. Include the Fall Protection and Prevention Plan documentation in the Accident Prevention Plan (APP).

1.7.3.7 Rescue and Evacuation Plan

Provide a Rescue and Evacuation Plan in accordance with EM 385-1-1 Section 21.N and ASSP Z359.2, and include in the FP&P Plan and as part of the APP. Include a detailed discussion of the following: methods of rescue; methods of self-rescue; equipment used; training requirement; specialized training for the rescuers; procedures for requesting rescue and medical

assistance; and transportation routes to a medical facility.

1.7.3.8 Hazardous Energy Control Program (HECP)

Develop a HECP in accordance with EM 385-1-1 Section 12, 29 CFR 1910.147, 29 CFR 1910.333, ASSP Z244.1, and ASSP A10.44. Submit this HECP as part of the Accident Prevention Plan (APP). Conduct a preparatory meeting and inspection with all effected personnel to coordinate all HECP activities. Document this meeting and inspection in accordance with EM 385-1-1, Section 12.A.02. Ensure that each employee is familiar with and complies with these procedures.

1.7.3.9 Excavation Plan

Identify the safety and health aspects of excavation and provide and prepare the plan in accordance with EM 385-1-1, Section 25.A; Federal, State and Local codes; and applicable regulations.

1.7.3.10 Lead, Cadmium, and Chromium Compliance Plan

Identify the safety and health aspects of work involving lead, cadmium and chromium, and prepare in accordance with Section 02 83 00 LEAD REMEDIATION.

1.7.3.11 Asbestos Hazard Abatement Plan

Identify the safety and health aspects of asbestos work, and prepare in accordance with Section 02 82 00 ASBESTOS REMEDIATION.

1.7.3.12 Site Demolition Plan

Identify the safety and health aspects and prepare in accordance with applicable Federal, State, and Local codes; applicable regulations; and referenced sources. Include engineering survey as applicable.

1.8 ACTIVITY HAZARD ANALYSIS (AHA)

Before beginning each activity, task or Definable Feature of Work (DFOW) involving a type of work presenting hazards not experienced in previous project operations, or where a new work crew or subcontractor is to perform the work, the Contractor(s) performing that work activity must prepare an AHA. AHAs must be developed by the Prime Contractor, subcontractor, or supplier performing the work, and provided for Prime Contractor review and approval before submitting to the Contracting Officer. AHAs must be signed by the SSHO, Superintendent, QC Manager and the subcontractor Foreman performing the work. Format the AHA in accordance with EM 385-1-1, Section 1 or as directed by the Contracting Officer. Submit the AHA for review at least 15 working days prior to the start of each activity task, or DFOW. The Government reserves the right to require the Contractor to revise and resubmit the AHA if it fails to effectively identify the work sequences, specific anticipated hazards, site conditions, equipment, materials, personnel and the control measures to be implemented.

AHAs must identify competent persons required for phases involving high risk activities, including confined entry, crane and rigging, excavations, trenching, electrical work, fall protection, and scaffolding.

1.8.1 AHA Management

Review the AHA list periodically (at least monthly) at the Contractor supervisory safety meeting, and update as necessary when procedures, scheduling, or hazards change. Use the AHA during daily inspections by the SSHO to ensure the implementation and effectiveness of the required safety and health controls for that work activity.

1.8.2 AHA Signature Log

Each employee performing work as part of an activity, task or DFOW must review the AHA for that work and sign a signature log specifically maintained for that AHA prior to starting work on that activity. The SSHO must maintain a signature log on site for every AHA. Provide employees whose primary language is other than English, with an interpreter to ensure a clear understanding of the AHA and its contents.

1.9 DISPLAY OF SAFETY INFORMATION

1.9.1 Safety Bulletin Board

Prior to commencement of work, erect a safety bulletin board at the job site. Where size, duration, or logistics of project do not facilitate a bulletin board, an alternative method, acceptable to the Contracting Officer, that is accessible and includes all mandatory information for employee and visitor review, may be deemed as meeting the requirement for a bulletin board. Include and maintain information on safety bulletin board as required by EM 385-1-1, Section 01.A.07. Additional items required to be posted include:

a. Confined space entry permit.

b. Hot work permit.

1.9.2 Safety and Occupational Health (SOH) Deficiency Tracking System

Establish a SOH deficiency tracking system that lists and monitors the status of SOH deficiencies in chronological order. Use the tracking system to evaluate the effectiveness of the APP. A monthly evaluation of the data must be discussed in the QC or SOH meeting with everyone on the project. The list must be posted on the project bulletin board and updated daily, and provide the following information:

a. Date deficiency identified;

b. Description of deficiency;

c. Name of person responsible for correcting deficiency;

d. Projected resolution date;

e. Date actually resolved.

1.10 SITE SAFETY REFERENCE MATERIALS

Maintain safety-related references applicable to the project, including those listed in paragraph REFERENCES. Maintain applicable equipment manufacturer's manuals.

1.11 EMERGENCY MEDICAL TREATMENT

Contractors must arrange for their own emergency medical treatment in accordance with EM 385-1-1. Government has no responsibility to provide emergency medical treatment.

1.12 NOTIFICATIONS and REPORTS

1.12.1 Mishap Notification

Notify the Contracting Officer as soon as practical, but no more than twenty-four hours, after any mishaps, including recordable accidents, incidents, and near misses, as defined in EM 385-1-1 Appendix Q, any report of injury, illness, or any property damage. For LHE or rigging mishaps, notify the Contracting Officer as soon as practical but not more than four hours after mishap. The Contractor is responsible for obtaining appropriate medical and emergency assistance and for notifying fire, law enforcement, and regulatory agencies. Immediate reporting is required for electrical mishaps, to include Arc Flash; shock; uncontrolled release of hazardous energy (includes electrical and non-electrical); load handling equipment or rigging; fall from height (any level other than same surface); and underwater diving. These mishaps must be investigated in depth to identify all causes and to recommend hazard control measures.

Within notification include Contractor name; Contract title; type of Contract; name of activity, installation or location where accident occurred; date and time of accident; names of personnel injured; extent of property damage, if any; extent of injury, if known, and brief description of accident (for example, type of construction equipment used and PPE used). Preserve the conditions and evidence on the accident site until the Government investigation team arrives on-site and Government investigation is conducted. Assist and cooperate fully with the Government's investigation(s) of any mishap.

1.12.2 Accident Reports

a. Conduct an accident investigation for recordable injuries and illnesses, property damage, and near misses as defined in EM 385-1-1, to establish the root cause(s) of the accident. Complete the applicable USACE Accident Report Form 3394, and provide the report to the Contracting Officer within 5 calendar days of the accident. The Contracting Officer will provide copies of any required or special forms.

b. Near Misses: For Army projects, report all "Near Misses" to the GDA, using local mishap reporting procedures, within 24 hrs. The Contracting Officer will provide the Contractor the required forms. Near miss reports are considered positive and proactive Contractor safety management actions.

c. Conduct an accident investigation for any load handling equipment accident (including rigging accidents) to establish the root cause(s) of the accident. Complete the LHE Accident Report (Crane and Rigging Accident Report) form and provide the report to the Contracting Officer within 30 calendar days of the accident. Do not proceed with crane operations until cause is determined and corrective actions have been implemented to the satisfaction of the Contracting Officer. The Contracting Officer will provide a blank copy of the accident report form.

1.12.3 LHE Inspection Reports

Submit LHE inspection reports required in accordance with EM 385-1-1 and as specified herein with Daily Reports of Inspections.

1.12.4 Certificate of Compliance and Pre-lift Plan/Checklist for LHE and Rigging

Provide a FORM 16-1 Certificate of Compliance for LHE entering an activity under this Contract and in accordance with EM 385-1-1. Post certifications on the crane.

Develop a Standard Lift Plan (SLP) in accordance with EM 385-1-1, Section 16.H.03 using Form 16-2 Standard Pre-Lift Crane Plan/Checklist for each lift planned. Submit SLP to the Contracting Officer for approval within 15 calendar days in advance of planned lift.

1.13 HOT WORK

1.13.1 Permit and Personnel Requirements

Submit and obtain a written permit prior to performing "Hot Work" (i.e. welding or cutting) or operating other flame-producing/spark producing devices, from the Fire Department. A permit is required from the Explosives Safety Office for work in and around where explosives are processed, stored, or handled. CONTRACTORS ARE REQUIRED TO MEET ALL CRITERIA BEFORE A PERMIT IS ISSUED. Provide at least two 20 pound 4A:20 BC rated extinguishers for normal "Hot Work". The extinguishers must be current inspection tagged, and contain an approved safety pin and tamper resistant seal. It is also mandatory to have a designated FIRE WATCH for any "Hot Work" done at this activity. The Fire Watch must be trained in accordance with NFPA 51B and remain on-site for a minimum of one hour after completion of the task or as specified on the hot work permit.

When starting work in the facility, require personnel to familiarize themselves with the location of the nearest fire alarm boxes and place in memory the emergency Fire Department phone number. REPORT ANY FIRE, NO MATTER HOW SMALL, TO THE RESPONSIBLE FIRE DEPARTMENT IMMEDIATELY.

1.13.2 Work Around Flammable Materials

Obtain permit approval from a NFPA Certified Marine Chemist, or Certified Industrial Hygienist for "HOT WORK" within or around flammable materials (such as fuel systems or welding/cutting on fuel pipes) or confined spaces (such as sewer wet wells, manholes, or vaults) that have the potential for flammable or explosive atmospheres.

Whenever these materials, except beryllium and chromium (VI), are encountered in indoor operations, local mechanical exhaust ventilation systems that are sufficient to reduce and maintain personal exposures to within acceptable limits must be used and maintained in accordance with manufacturer's instruction and supplemented by exceptions noted in EM 385-1-1, Section 06.H

1.14 CONFINED SPACE ENTRY REQUIREMENTS

Confined space entry must comply with Section 34 of EM 385-1-1, OSHA 29 CFR 1926, OSHA 29 CFR 1910, OSHA 29 CFR 1910.146, and OSHA Directive

CPL 2.100. Any potential for a hazard in the confined space requires a permit system to be used.

1.14.1 Entry Procedures

Prohibit entry into a confined space by personnel for any purpose, including hot work, until the qualified person has conducted appropriate tests to ensure the confined or enclosed space is safe for the work intended and that all potential hazards are controlled or eliminated and documented. Comply with EM 385-1-1, Section 34 for entry procedures. Hazards pertaining to the space must be reviewed with each employee during review of the AHA.

1.14.2 Forced Air Ventilation

Forced air ventilation is required for all confined space entry operations and the minimum air exchange requirements must be maintained to ensure exposure to any hazardous atmosphere is kept below its action level.

1.14.3 Sewer Wet Wells

Sewer wet wells require continuous atmosphere monitoring with audible alarm for toxic gas detection.

1.14.4 Rescue Procedures and Coordination with Local Emergency Responders

Develop and implement an on-site rescue and recovery plan and procedures. The rescue plan must not rely on local emergency responders for rescue from a confined space.

1.15 SEVERE STORM PLAN

In the event of a severe storm warning, the Contractor must comply with the applicable Storm Plan and:

a. Secure outside equipment and materials and place materials that could be damaged in protected areas.

b. Check surrounding area, including roof, for loose material, equipment, debris, and other objects that could be blown away or against existing facilities.

c. Ensure that temporary erosion controls are adequate.

PART 2 PRODUCTS

Not Used

PART 3 EXECUTION

3.1 CONSTRUCTION AND OTHER WORK

Comply with EM 385-1-1, NFPA 70, NFPA 70E, NFPA 241, the APP, the AHA, Federal and State OSHA regulations, and other related submittals and activity fire and safety regulations. The most stringent standard prevails.

PPE is governed in all areas by the nature of the work the employee is performing. Use personal hearing protection at all times in designated

noise hazardous areas or when performing noise hazardous tasks. Safety glasses must be worn or carried/available on each person. Mandatory PPE includes:

a. Hard Hat

b. Long Pants

c. Appropriate Safety Shoes

d. Appropriate Class Reflective Vests

3.1.1 Worksite Communication

Employees working alone in a remote location or away from other workers must be provided an effective means of emergency communications (i.e., cellular phone, two-way radios, land-line telephones or other acceptable means). The selected communication must be readily available (easily within the immediate reach) of the employee and must be tested prior to the start of work to verify that it effectively operates in the area/environment. Develop an employee check-in/check-out communication procedure to ensure employee safety.

3.1.2 Hazardous Material Exclusions

Notwithstanding any other hazardous material used in this Contract, radioactive materials or instruments capable of producing ionizing/non-ionizing radiation (with the exception of radioactive material and devices used in accordance with EM 385-1-1 such as nuclear density meters for compaction testing and laboratory equipment with radioactive sources) as well as materials which contain asbestos, mercury or polychlorinated biphenyls, di-isocyanates, lead-based paint, and hexavalent chromium, are prohibited. The Contracting Officer, upon written request by the Contractor, may consider exceptions to the use of any of the above excluded materials. Low mercury lamps used within fluorescent lighting fixtures are allowed as an exception without further Contracting Officer approval. Notify the Radiation Safety Officer (RSO) prior to excepted items of radioactive material and devices being brought on base.

3.1.3 Unforeseen Hazardous Material

Contract documents identify materials such as PCB, lead paint, and friable and non-friable asbestos and other OSHA regulated chemicals (i.e. 29 CFR Part 1910.1000). If material(s) that may be hazardous to human health upon disturbance are encountered during construction operations, stop that portion of work and notify the Contracting Officer immediately. Within 14 calendar days the Government will determine if the material is hazardous. If material is not hazardous or poses no danger, the Government will direct the Contractor to proceed without change. If material is hazardous and handling of the material is necessary to accomplish the work, the Government will issue a modification pursuant to FAR 52.243-4 Changes and FAR 52.236-2 Differing Site Conditions.

3.2 UTILITY OUTAGE REQUIREMENTS

Apply for utility outages at least 14 days in advance. At a minimum, the written request must include the location of the outage, utilities being affected, duration of outage, any necessary sketches, and a description of

the means to fulfill energy isolation requirements in accordance with EM 385-1-1, Section 11.A.02 (Isolation). Some examples of energy isolation devices and procedures are highlighted in EM 385-1-1, Section 12.D. In accordance with EM 385-1-1, Section 12.A.01, where outages involve Government or Utility personnel, coordinate with the Government on all activities involving the control of hazardous energy.

These activities include, but are not limited to, a review of HECP and HEC procedures, as well as applicable Activity Hazard Analyses (AHAs). In accordance with EM 385-1-1, Section 11.A.02 and NFPA 70E, work on energized electrical circuits must not be performed without prior Government authorization. Government permission is considered through the permit process and submission of a detailed AHA. Energized work permits are considered only when de-energizing introduces additional or increased hazard or when de-energizing is infeasible.

3.3 OUTAGE COORDINATION MEETING

After the utility outage request is approved and prior to beginning work on the utility system requiring shut-down, conduct a pre-outage coordination meeting in accordance with EM 385-1-1, Section 12.A. This meeting must include the Prime Contractor, the Prime and subcontractors performing the work, the Contracting Officer, and the Installation representative. All parties must fully coordinate HEC activities with one another. During the coordination meeting, all parties must discuss and coordinate on the scope of work, HEC procedures (specifically, the lock-out/tag-out procedures for worker and utility protection), the AHA, assurance of trade personnel qualifications, identification of competent persons, and compliance with HECP training in accordance with EM 385-1-1, Section 12.C. Clarify when personal protective equipment is required during switching operations, inspection, and verification.

3.4 CONTROL OF HAZARDOUS ENERGY (LOCKOUT/TAGOUT)

Provide and operate a Hazardous Energy Control Program (HECP) in accordance with EM 385-1-1 Section 12, 29 CFR 1910.333, ASSP A10.44, NFPA 70E, and paragraph HAZARDOUS ENERGY CONTROL PROGRAM (HECP).

3.4.1 Safety Preparatory Inspection Coordination Meeting with the Government or Utility

For electrical distribution equipment that is to be operated by Government or Utility personnel, the Prime Contractor and the subcontractor performing the work must attend the safety preparatory inspection coordination meeting, which will also be attended by the Contracting Officer's Representative, and required by EM 385-1-1, Section 12.A.02. The meeting will occur immediately preceding the start of work and following the completion of the outage coordination meeting. Both the safety preparatory inspection coordination meeting and the outage coordination meeting must occur prior to conducting the outage and commencing with lockout/tagout procedures.

3.4.2 Lockout/Tagout Isolation

Where the Government or Utility performs equipment isolation and lockout/tagout, the Contractor must place their own locks and tags on each energy-isolating device and proceed in accordance with the HECP. Before any work begins, both the Contractor and the Government or Utility must perform energy isolation verification testing while wearing required PPE

detailed in the Contractor's AHA and required by EM 385-1-1, Sections 05.I and 11.B. Install personal protective grounds, with tags, to eliminate the potential for induced voltage in accordance with EM 385-1-1, Section 12.E.06.

3.4.3 Lockout/Tagout Removal

Upon completion of work, conduct lockout/tagout removal procedure in accordance with the HECP. In accordance with EM 385-1-1, Section 12.E.08, each lock and tag must be removed from each energy isolating device by the authorized individual or systems operator who applied the device. Provide formal notification to the Government (by completing the Government form if provided by Contracting Officer's Representative), confirming that steps of de-energization and lockout/tagout removal procedure have been conducted and certified through inspection and verification. Government or Utility locks and tags used to support the Contractor's work will not be removed until the authorized Government employee receives the formal notification.

3.5 FALL PROTECTION PROGRAM

Establish a fall protection program, for the protection of all employees exposed to fall hazards. Within the program include company policy, identify roles and responsibilities, education and training requirements, fall hazard identification, prevention and control measures, inspection, storage, care and maintenance of fall protection equipment and rescue and evacuation procedures in accordance with ASSP Z359.2 and EM 385-1-1, Sections 21.A and 21.D.

3.5.1 Training

Institute a fall protection training program. As part of the Fall Protection Program, provide training for each employee who might be exposed to fall hazards and using personal fall protection equipment. Provide training by a competent person for fall protection in accordance with EM 385-1-1, Section 21.C. Document training and practical application of the competent person in accordance with EM 385-1-1, Section 21.C.04 and ASSP Z359.2 in the AHA.

3.5.2 Fall Protection Equipment and Systems

Enforce use of personal fall protection equipment and systems designated (to include fall arrest, restraint, and positioning) for each specific work activity in the Site Specific Fall Protection and Prevention Plan and AHA at all times when an employee is exposed to a fall hazard. Protect employees from fall hazards as specified in EM 385-1-1, Section 21.

Provide personal fall protection equipment, systems, subsystems, and components that comply with EM 385-1-1 Section 21.I, 29 CFR 1926.500 Subpart M,ASSP Z359.0, ASSP Z359.1, ASSP Z359.2, ASSP Z359.3, ASSP Z359.4, ASSP Z359.6, ASSP Z359.7, ASSP Z359.11, ASSP Z359.12, ASSP Z359.13, ASSP Z359.14, ASSP Z359.15, ASSP Z359.16 and ASSP Z359.18.

3.5.2.1 Additional Personal Fall Protection Measures

In addition to the required fall protection systems, other protective measures such as safety skiffs, personal floatation devices, and life rings, are required when working above or next to water in accordance with EM 385-1-1, Sections 21.O through 21.O.06. Personal fall protection

systems and equipment are required when working from an articulating or extendible boom, swing stages, or suspended platform. In addition, personal fall protection systems are required when operating other equipment such as scissor lifts. The need for tying-off in such equipment is to prevent ejection of the employee from the equipment during raising, lowering, travel, or while performing work.

3.5.2.2 Personal Fall Protection Equipment

Only a full-body harness with a shock-absorbing lanyard or self-retracting lanyard is an acceptable personal fall arrest body support device. The use of body belts is not acceptable. Harnesses must have a fall arrest attachment affixed to the body support (usually a Dorsal D-ring) and specifically designated for attachment to the rest of the system. Snap hooks and carabineers must be self-closing and self-locking, capable of being opened only by at least two consecutive deliberate actions and have a minimum gate strength of 3,600 lbs in all directions. Use webbing, straps, and ropes made of synthetic fiber. The maximum free fall distance when using fall arrest equipment must not exceed 6 feet, unless the proper energy absorbing lanyard is used. Always take into consideration the total fall distance and any swinging of the worker (pendulum-like motion), that can occur during a fall, when attaching a person to a fall arrest system. Equip all full body harnesses with Suspension Trauma Preventers such as stirrups, relief steps, or similar in order to provide short-term relief from the effects of orthostatic intolerance in accordance with EM 385-1-1, Section 21.I.06.

3.5.3 Fall Protection for Roofing Work

Implement fall protection controls based on the type of roof being constructed and work being performed. Evaluate the roof area to be accessed for its structural integrity including weight-bearing capabilities for the projected loading.

a. Low Sloped Roofs:

(1) For work within 6 feet from unprotected edge of a roof having a slope less than or equal to 4:12 (vertical to horizontal), protect personnel from falling by the use of conventional fall protection systems (personal fall arrest/restraint systems, guardrails, or safety nets) in accordance with EM 385-1-1, Section 21 and 29 CFR 1926.500. A safety monitoring system is not adequate fall protection and is not authorized.

(2) For work greater than 6 feet from the unprotected roof edge, addition to the use of conventional fall protection systems the use of a warning line system is also permitted, in accordance with 29 CFR 1926.500 and EM 385-1-1, Section 21.L.

b. Steep-Sloped Roofs: Work on a roof having a slope greater than 4:12 (vertical to horizontal) requires a personal fall arrest system, guardrails with toe-boards, or safety nets. This requirement also applies to residential or housing type construction.

3.5.4 Horizontal Lifelines (HLL)

Provide HLL in accordance with EM 385-1-1, Section 21.I.08.d.2. Commercially manufactured horizontal lifelines (HLL) must be designed, installed, certified and used, under the supervision of a qualified

person, for fall protection as part of a complete fall arrest system which maintains a safety factor of 2 (29 CFR 1926.500). The competent person for fall protection may (if deemed appropriate by the qualified person) supervise the assembly, disassembly, use and inspection of the HLL system under the direction of the qualified person. Locally manufactured HLLs are not acceptable unless they are custom designed for limited or site specific applications by a Registered Professional Engineer who is qualified in designing HLL systems.

3.5.5 Guardrails and Safety Nets

Design, install and use guardrails and safety nets in accordance with EM 385-1-1, Section 21.F.01 and 29 CFR 1926 Subpart M.

3.5.6 Rescue and Evacuation Plan and Procedures

When personal fall arrest systems are used, ensure that the mishap victim can self-rescue or can be rescued promptly should a fall occur. Prepare a Rescue and Evacuation Plan and include a detailed discussion of the following: methods of rescue; methods of self-rescue or assisted-rescue; equipment used; training requirement; specialized training for the rescuers; procedures for requesting rescue and medical assistance; and transportation routes to a medical facility. Include the Rescue and Evacuation Plan within the Activity Hazard Analysis (AHA) for the phase of work, in the Fall Protection and Prevention (FP&P) Plan, and the Accident Prevention Plan (APP). The plan must be in accordance with the requirements of EM 385-1-1, ASSP Z359.2, and ASSP Z359.4.

3.6 WORK PLATFORMS

3.6.1 Scaffolding

Provide employees with a safe means of access to the work area on the scaffold. Climbing of any scaffold braces or supports not specifically designed for access is prohibited. Comply with the following requirements:

a. Scaffold platforms greater than 20 feet in height must be accessed by use of a scaffold stair system.

b. Ladders commonly provided by scaffold system manufacturers are prohibited for accessing scaffold platforms greater than 20 feet maximum in height.

c. An adequate gate is required.

d. Employees performing scaffold erection and dismantling must be qualified.

e. Scaffold must be capable of supporting at least four times the maximum intended load, and provide appropriate fall protection as delineated in the accepted fall protection and prevention plan.

f. Stationary scaffolds must be attached to structural building components to safeguard against tipping forward or backward.

g. Special care must be given to ensure scaffold systems are not overloaded.

h. Side brackets used to extend scaffold platforms on self-supported

scaffold systems for the storage of material are prohibited. The first tie-in must be at the height equal to 4 times the width of the smallest dimension of the scaffold base.

i. Scaffolding other than suspended types must bear on base plates upon wood mudsills (2 in x 10 in x 8 in minimum) or other adequate firm foundation.

j. Scaffold or work platform erectors must have fall protection during the erection and dismantling of scaffolding or work platforms that are more than 6 feet.

k. Delineate fall protection requirements when working above 6 feet or above dangerous operations in the Fall Protection and Prevention (FP&P) Plan and Activity Hazard Analysis (AHA) for the phase of work.

3.6.2 Elevated Aerial Work Platforms (AWPs)

Workers must be anchored to the basket or bucket in accordance with manufacturer's specifications and instructions (anchoring to the boom may only be used when allowed by the manufacturer and permitted by the CP). Lanyards used must be sufficiently short to prohibit worker from climbing out of basket. The climbing of rails is prohibited. Lanyards with built-in shock absorbers are acceptable. Self-retracting devices are not acceptable. Tying off to an adjacent pole or structure is not permitted unless a safe device for 100 percent tie-off is used for the transfer.

Use of AWPs must be operated, inspected, and maintained as specified in the operating manual for the equipment and delineated in the AHA. Operators of AWPs must be designated as qualified operators by the Prime Contractor. Maintain proof of qualifications on site for review and include in the AHA.

3.7 EQUIPMENT

3.7.1 Material Handling Equipment (MHE)

a. Material handling equipment such as forklifts must not be modified with work platform attachments for supporting employees unless specifically delineated in the manufacturer's printed operating instructions. Material handling equipment fitted with personnel work platform attachments are prohibited from traveling or positioning while personnel are working on the platform.

b. The use of hooks on equipment for lifting of material must be in accordance with manufacturer's printed instructions. Material Handling Equipment Operators must be trained in accordance with OSHA 29 CFR 1910, Subpart N.

c. Operators of forklifts or power industrial trucks must be licensed in accordance with OSHA.

3.7.2 Load Handling Equipment (LHE)

The following requirements apply. In exception, these requirements do not apply to commercial truck mounted and articulating boom cranes used solely to deliver material and supplies (not prefabricated components, structural steel, or components of a systems-engineered metal building) where the lift consists of moving materials and supplies from a truck or trailer to

the ground; to cranes installed on mechanics trucks that are used solely in the repair of shore-based equipment; to crane that enter the activity but are not used for lifting; nor to other machines not used to lift loads suspended by rigging equipment. However, LHE accidents occurring during such operations must be reported.

a. Equip cranes and derricks as specified in EM 385-1-1, Section 16.

b. Notify the Contracting Officer 15 working days in advance of any LHE entering the activity, in accordance with EM 385-1-1, Section 16.A.02, so that necessary quality assurance spot checks can be coordinated. Contractor's operator must remain with the crane during the spot check. Rigging gear must be in accordance with OSHA, ASME B30.9 Standards.

c. Comply with the LHE manufacturer's specifications and limitations for erection and operation of cranes and hoists used in support of the work. Perform erection under the supervision of a designated person (as defined in ASME B30.5). Perform all testing in accordance with the manufacturer's recommended procedures.

d. Comply with ASME B30.5 for mobile and locomotive cranes, ASME B30.22 for articulating boom cranes, ASME B30.3 for construction tower cranes, ASME B30.9 for slings, ASME B30.20 for below the hook lifting devices and ASME B30.26 for rigging hardware.

e. When operating in the vicinity of overhead transmission lines, operators and riggers must be alert to this special hazard and follow the requirements of EM 385-1-1 Section 11, and ASME B30.5 or ASME B30.22 as applicable.

f. Do not use crane suspended personnel work platforms (baskets) unless the Contractor proves that using any other access to the work location would provide a greater hazard to the workers or is impossible. Do not lift personnel with a line hoist or friction crane. Additionally, submit a specific AHA for this work to the Contracting Officer. Ensure the activity and AHA are thoroughly reviewed by all involved personnel.

g. Inspect, maintain, and recharge portable fire extinguishers as specified in NFPA 10, Standard for Portable Fire Extinguishers.

h. All employees must keep clear of loads about to be lifted and of suspended loads, except for employees required to handle the load.

i. Use cribbing when performing lifts on outriggers.

j. The crane hook/block must be positioned directly over the load. Side loading of the crane is prohibited.

k. A physical barricade must be positioned to prevent personnel access where accessible areas of the LHE's rotating superstructure poses a risk of striking, pinching or crushing personnel.

l. Maintain inspection records in accordance with EM 385-1-1, Section 16.D, including shift, monthly, and annual inspections, the signature of the person performing the inspection, and the serial number or other identifier of the LHE that was inspected. Records must be available for review by the Contracting Officer.

m. Maintain written reports of operational and load testing in accordance with EM 385-1-1, Section 16.F, listing the load test procedures used along with any repairs or alterations performed on the LHE. Reports must be available for review by the Contracting Officer.

n. Certify that all LHE operators have been trained in proper use of all safety devices (e.g. anti-two block devices).

o. Take steps to ensure that wind speed does not contribute to loss of control of the load during lifting operations. At wind speeds greater than 20 mph, the operator, rigger and lift supervisor must cease all crane operations, evaluate conditions and determine if the lift may proceed. Base the determination to proceed or not on wind calculations per the manufacturer and a reduction in LHE rated capacity if applicable. Include this maximum wind speed determination as part of the activity hazard analysis plan for that operation.

p. Follow FAA guidelines when required based on project location.

3.7.3 Machinery and Mechanized Equipment

a. Proof of qualifications for operator must be kept on the project site for review.

b. Manufacture specifications or owner's manual for the equipment must be on-site and reviewed for additional safety precautions or requirements that are sometimes not identified by OSHA or USACE EM 385-1-1. Incorporate such additional safety precautions or requirements into the AHAs.

3.7.4 Base Mounted Drum Hoists

a. Operation of base mounted drum hoists must be in accordance with EM 385-1-1 and ASSP A10.22.

b. Rigging gear must be in accordance with applicable ASME/OSHA standards.

c. When used on telecommunication towers, base mounted drum hoists must be in accordance with TIA-1019, TIA-222, ASME B30.7, 29 CFR 1926.552, and 29 CFR 1926.553.

d. When used to hoist personnel, the AHA must include a written standard operating procedure. Operators must have a physical examination in accordance with EM 385-1-1 Section 16.B.05 and trained, at a minimum, in accordance with EM 385-1-1 Section 16.U and 16.T. The base mounted drum hoist must also comply with OSHA Instruction CPL 02-01-056 and ASME B30.23.

e. Material and personnel must not be hoisted simultaneously.

f. Personnel cage must be marked with the capacity (in number of persons) and load limit in pounds.

g. Construction equipment must not be used for hoisting material or personnel or with trolley/tag lines. Construction equipment may be used for towing and assisting with anchoring guy lines.

3.7.5 Use of Explosives

Explosives must not be used or brought to the project site without prior written approval from the Contracting Officer. Such approval does not relieve the Contractor of responsibility for injury to persons or for damage to property due to blasting operations.

Storage of explosives, when permitted on Government property, must be only where directed and in approved storage facilities. These facilities must be kept locked at all times except for inspection, delivery, and withdrawal of explosives.

3.8 EXCAVATIONS

Soil classification must be performed by a competent person in accordance with 29 CFR 1926 and EM 385-1-1.

3.8.1 Utility Locations

Provide a third party, independent, private utility locating company to positively identify underground utilities in the work area in addition to any station locating service and coordinated with the station utility department.

3.8.2 Utility Location Verification

Physically verify underground utility locations, including utility depth, by hand digging using wood or fiberglass handled tools when any adjacent construction work is expected to come within 3 feet of the underground system.

3.8.3 Utilities Within and Under Concrete, Bituminous Asphalt, and Other Impervious Surfaces

Utilities located within and under concrete slabs or pier structures, bridges, parking areas, and the like, are extremely difficult to identify. Whenever Contract work involves chipping, saw cutting, or core drilling through concrete, bituminous asphalt or other impervious surfaces, the existing utility location must be coordinated with station utility departments in addition to location and depth verification by a third party, independent, private locating company. The third party, independent, private locating company must locate utility depth by use of Ground Penetrating Radar (GPR), X-ray, bore scope, or ultrasound prior to the start of demolition and construction. Outages to isolate utility systems must be used in circumstances where utilities are unable to be positively identified. The use of historical drawings does not alleviate the Contractor from meeting this requirement.

3.9 ELECTRICAL

Perform electrical work in accordance with EM 385-1-1, Sections 11 and 12.

3.9.1 Conduct of Electrical Work

As delineated in EM 385-1-1, electrical work is to be conducted in a de-energized state unless there is no alternative method for accomplishing the work. In those cases obtain an energized work permit from the Contracting Officer. The energized work permit application must be accompanied by the AHA and a summary of why the equipment/circuit needs to

be worked energized. Underground electrical spaces must be certified safe for entry before entering to conduct work. Cables that will be cut must be positively identified and de-energized prior to performing each cut. Attach temporary grounds in accordance with ASTM F855 and IEEE 1048. Perform all high voltage cable cutting remotely using hydraulic cutting tool. When racking in or live switching of circuit breakers, no additional person other than the switch operator is allowed in the space during the actual operation. Plan so that work near energized parts is minimized to the fullest extent possible. Use of electrical outages clear of any energized electrical sources is the preferred method.

When working in energized substations, only qualified electrical workers are permitted to enter. When work requires work near energized circuits as defined by NFPA 70, high voltage personnel must use personal protective equipment that includes, as a minimum, electrical hard hat, safety shoes, insulating gloves and electrical arc flash protection for personnel as required by NFPA 70E. Insulating blankets, hearing protection, and switching suits may also be required, depending on the specific job and as delineated in the Contractor's AHA. Ensure that each employee is familiar with and complies with these procedures and 29 CFR 1910.147.

3.9.2 Qualifications

Electrical work must be performed by QP with verifiable credentials who are familiar with applicable code requirements. Verifiable credentials consist of State, National and Local Certifications or Licenses that a Master or Journeyman Electrician may hold, depending on work being performed, and must be identified in the appropriate AHA. Journeyman/Apprentice ratio must be in accordance with State and Local requirements applicable to where work is being performed.

3.9.3 Arc Flash

Conduct a hazard analysis/arc flash hazard analysis whenever work on or near energized parts greater than 50 volts is necessary, in accordance with NFPA 70E.

All personnel entering the identified arc flash protection boundary must be QPs and properly trained in NFPA 70E requirements and procedures. Unless permitted by NFPA 70E, no Unqualified Person is permitted to approach nearer than the Limited Approach Boundary of energized conductors and circuit parts. Training must be administered by an electrically qualified source and documented.

3.9.4 Grounding

Ground electrical circuits, equipment and enclosures in accordance with NFPA 70 and IEEE C2 to provide a permanent, continuous and effective path to ground unless otherwise noted by EM 385-1-1.

Check grounding circuits to ensure that the circuit between the ground and a grounded power conductor has a resistance low enough to permit sufficient current flow to allow the fuse or circuit breaker to interrupt the current.

3.9.5 Testing

Temporary electrical distribution systems and devices must be inspected,

tested and found acceptable for Ground-Fault Circuit Interrupter (GFCI) protection, polarity, ground continuity, and ground resistance before initial use, before use after modification and at least monthly. Monthly inspections and tests must be maintained for each temporary electrical distribution system, and signed by the electrical CP or QP.

-- End of Section --

SECTION 01 45 00.00 10

QUALITY CONTROL
11/16, CHG 2: 11/21

PART 1 GENERAL

1.1 REFERENCES

The publications listed below form a part of this specification to the extent referenced. The publications are referred to within the text by the basic designation only.

ASTM INTERNATIONAL (ASTM)

ASTM D3740	(2019) Minimum Requirements for Agencies Engaged in the Testing and/or Inspection of Soil and Rock as Used in Engineering Design and Construction
ASTM E329	(2021) Standard Specification for Agencies Engaged in Construction Inspection, Testing, or Special Inspection

1.2 PAYMENT

Separate payment will not be made for providing and maintaining an effective Quality Control program. Include all associated costs in the applicable Bid Schedule item.

1.3 SUBMITTALS

Government approval is required for submittals with a "G" or "S" classification. Submittals not having a "G" or "S" classification are for information only. When used, a code following the "G" classification identifies the office that will review the submittal for the Government. Submit the following in accordance with Section 01 33 00 SUBMITTAL PROCEDURES:

SD-01 Preconstruction Submittals

Contractor Quality Control (CQC) Plan; G

SD-06 Test Reports

Verification Statement

PART 2 PRODUCTS

Not Used

PART 3 EXECUTION

3.1 GENERAL REQUIREMENTS

Establish and maintain an effective quality control (QC) system that complies with FAR 52.246-12 Inspection of Construction. QC consist of plans, procedures, and organization necessary to produce an end product

which complies with the Contract requirements. The QC system covers all construction operations, both onsite and offsite, and be keyed to the proposed construction sequence. The project superintendent will be held responsible for the quality of work and is subject to removal by the Contracting Officer for non-compliance with the quality requirements specified in the Contract. In this context the highest level manager responsible for the overall construction activities at the site, including quality and production is the project superintendent. The project superintendent maintains a physical presence at the site at all times and is responsible for all construction and related activities at the site, except as otherwise acceptable to the Contracting Officer.

3.2 CONTRACTOR QUALITY CONTROL (CQC) PLAN

Submit no later than 30 days after receipt of notice to proceed, the Contractor Quality Control (CQC) Plan proposed to implement the requirements FAR 52.246-12 Inspection of Construction. The Government will consider an interim plan for the first 25 days of operation. Construction will be permitted to begin only after acceptance of the CQC Plan or acceptance of an interim plan applicable to the particular feature of work to be started. Work outside of the accepted interim plan will not be permitted to begin until acceptance of a CQC Plan or another interim plan containing the additional work.

3.2.1 Content of the CQC Plan

Include, as a minimum, the following to cover all construction-operations, both onsite and offsite, including work by subcontractors fabricators, suppliers and purchasing agents:

a. A description of the quality control organization, including a chart showing lines of authority and acknowledgment that the CQC staff will implement the three phase control system for all aspects of the work specified. Include a CQC System Manager that reports to an individual other than the project superintendent. The individual should be outside of the project superintendent's chain of command and must be shown as at least one level above the project superintendent in the chain of command.

b. The name, qualifications (in resume format), duties, responsibilities, and authorities of each person assigned a CQC function.

c. A copy of the letter to the CQC System Manager signed by an authorized official of the firm which describes the responsibilities and delegates sufficient authorities to adequately perform the functions of the CQC System Manager, including authority to stop work which is not in compliance with the Contract. Letters of direction to all other various quality control representatives outlining duties, authorities, and responsibilities will be issued by the CQC System Manager. Furnish copies of these letters to the Contracting Officer.

d. Procedures for scheduling, reviewing, certifying, and managing submittals, including those of subcontractors, offsite fabricators, suppliers, and purchasing agents. These procedures must be in accordance with Section 01 33 00 SUBMITTAL PROCEDURES.

e. Control, verification, and acceptance testing procedures for each specific test to include the test name, specification paragraph requiring test, feature of work to be tested, test frequency, and

person responsible for each test. (Laboratory facilities approved by the Contracting Officer are required to be used.)

f. Procedures for tracking preparatory, initial, and follow-up control phases and control, verification, and acceptance tests including documentation.

g. Procedures for tracking construction deficiencies from identification through acceptable corrective action. Establish verification procedures that identified deficiencies have been corrected.

h. Reporting procedures, including proposed reporting formats.

i. A list of the definable features of work. A definable feature of work is a task which is separate and distinct from other tasks, has separate control requirements, and is identified by different trades or disciplines, or it is work by the same trade in a different environment. Although each section of the specifications can generally be considered as a definable feature of work, there are frequently more than one definable features under a particular section. This list will be agreed upon during the coordination meeting.

j. Coordinate scheduled work with Special Inspections required by Section 01 45 35 SPECIAL INSPECTIONS, the Statement of Special Inspections and the Schedule of Special Inspections. Where the applicable code issued by the International Code Council (ICC) calls for inspections by the Building Official, the Contractor must include the inspections in the Quality Control Plan and must perform the inspections required by the applicable ICC. The Contractor must perform these inspections using independent qualified inspectors. Include the Special Inspection Plan requirements in the QC Plan.

3.2.2 Acceptance of Plan

Acceptance of the Contractor's plan is required prior to the start of construction. Acceptance is conditional and will be predicated on satisfactory performance during the construction. The Government reserves the right to require the Contractor to make changes in the Contractor Quality Control(CQC) Plan and operations including removal of personnel, as necessary, to obtain the quality specified.

3.2.3 Notification of Changes

After acceptance of the CQC Plan, notify the Contracting Officer in writing of any proposed change. Proposed changes are subject to acceptance by the Contracting Officer.

3.3 COORDINATION MEETING

After the Preconstruction Conference, before start of construction, and prior to acceptance by the Government of the CQC Plan, meet with the Contracting Officer and discuss the Contractor's quality control system. Submit the CQC Plan a minimum of 7 calendar days prior to the Coordination Meeting. During the meeting, a mutual understanding of the system details must be developed, including the forms for recording the CQC operations,, control activities, testing, administration of the system for both onsite and offsite work, and the interrelationship of Contractor's Management and control with the Government's Quality Assurance. Minutes of the meeting

will be prepared by the Government, signed by both the Contractor and the Contracting Officer and will become a part of the contract file. There can be occasions when subsequent conferences will be called by either party to reconfirm mutual understandings or address deficiencies in the CQC system or procedures which can require corrective action by the Contractor.

3.4 QUALITY CONTROL ORGANIZATION

3.4.1 Personnel Requirements

The requirements for the CQC organization are a Safety and Health Manager, CQC System Manager, and sufficient number of additional qualified personnel to ensure safety and Contract compliance. The Safety and Health Manager reports directly to a senior project (or corporate) official independent from the CQC System Manager. The Safety and Health Manager will also serve as a member of the CQC Staff Personnel identified in the technical provisions as requiring specialized skills to assure the required work is being performed properly will also be included as part of the CQC organization. The Contractor's CQC staff maintains a presence at the site at all times during progress of the work and have complete authority and responsibility to take any action necessary to ensure Contract compliance. The CQC staff will be subject to acceptance by the Contracting Officer. Provide adequate office space, filing systems and other resources as necessary to maintain an effective and fully functional CQC organization. Promptly complete and furnish all letters, material submittals, shop drawing submittals, schedules and all other project documentation to the CQC organization. The CQC organization is responsible for maintaining these documents and records at the site at all times, except as otherwise acceptable to the Contracting Officer.

3.4.2 CQC System Manager

Identify as CQC System Manager an individual within the onsite work organization that is responsible for overall management of CQC and has the authority to act in all CQC matters for the Contractor. The CQC System Manager is required to be a graduate engineer, graduate architect, or a graduate of construction management, with a minimum of 5 years construction experience on construction similar to this Contract. This CQC System Manager is on the site at all times during construction and is employed by the prime Contractor. The CQC System Manager is assigned no other duties. Identify in the plan an alternate to serve in the event of the CQC System Manager's absence. The requirements for the alternate are the same as the CQC System Manager.

3.4.3 CQC Personnel

In addition to CQC personnel specified elsewhere in the contract, provide as part of the CQC organization specialized personnel to assist the CQC System Manager for the following areas: electrical, mechanical, structural, environmental, architectural, materials technician, submittals clerk, Cx Agent/LEED Specialist,. These individuals or specialized technical companies are directly employed by the prime Contractor and can not be employed by a supplier or subcontractor on this project; be responsible to the CQC System Manager; be physically present at the construction site during work on the specialized personnel's areas of responsibility; have the necessary education or experience in accordance with the experience matrix listed herein. These individuals can perform other duties but need to be allowed sufficient time to perform the

specialized personnel's assigned quality control duties as described in the Quality Control Plan. A single person can cover more than one area provided that the single person is qualified to perform quality control activities in each designated and that workload allows.

Experience Matrix	
Area	Qualifications
Civil	Graduate Civil Engineer or Construction Manager with 2 years experience in the type of work being performed on this project or technician with 5 yrs related experience
Mechanical	Graduate Mechanical Engineer with 2 yrs experience or person with 5 years of experience supervising mechanical features of work in the field with a construction company
Electrical	Graduate Electrical Engineer with 2 years related experience or person 5 years of experience supervising electrical features of work in the field with a construction company
Structural	Graduate Civil Engineer (with Structural Track or Focus) or Construction Manager with 2 years experience or person 5 years of experience supervising structural features of work in the field with a construction company
Architectural	Graduate Architect with 2 years experience or person with 5 years related experience
Environmental	Graduate Environmental Engineer with 3 years experience
Submittals	Submittal Clerk with 1 year experience
Concrete, Pavements and Soils	Materials Technician with 2 years experience for the appropriate area
Testing, Adjusting and Balancing (TAB) Personnel	Specialist must be a member of AABC or an experienced technician of the firm certified by the NEBB

Experience Matrix	
Area	Qualifications

3.4.4 Additional Requirement

In addition to the above experience and education requirements, the Contractor Quality Control(CQC) System Manager and Alternate CQC System Manager are required to have completed the Construction Quality Management (CQM) for Contractors course. If the CQC System Manager does not have a current certification, obtain the CQM for Contractors course certification within 90 days of award. This course is periodically offered by the Naval Facilities Engineering Command and the Army Corps of Engineers. Contact the Contracting Officer for information on the next scheduled class.

The Construction Quality Management Training certificate expires after 5 years. If the CQC System Manager's certificate has expired, retake the course to remain current.

3.4.5 Organizational Changes

Maintain the CQC staff at full strength at all times. When it is necessary to make changes to the CQC staff, revise the CQC Plan to reflect the changes and submit the changes to the Contracting Officer for acceptance.

3.5 SUBMITTALS AND DELIVERABLES

Submittals, if needed, have to comply with the requirements in Section 01 33 00 SUBMITTAL PROCEDURES. The CQC organization is responsible for certifying that all submittals and deliverables are in compliance with the contract requirements. When Section 01 91 00 GENERAL COMMISSIONING REQUIREMENTS is included in the contract, the submittals required by this section have to be coordinated with Section 01 33 00 SUBMITTAL PROCEDURES to ensure adequate time is allowed for each type of submittal required.

3.6 CONTROL

CQC is the means by which the Contractor ensures that the construction, to include that of subcontractors and suppliers, complies with the requirements of the contract. At least three phases of control are required to be conducted by the CQC System Manager for each definable feature of the construction work as follows:

3.6.1 Preparatory Phase

This phase is performed prior to beginning work on each definable feature of work, after all required plans/documents/materials are approved/accepted, and after copies are at the work site. This phase includes:

a. A review of each paragraph of applicable specifications, reference codes, and standards. Make available during the preparatory inspection a copy of those sections of referenced codes and standards applicable to that portion of the work to be accomplished in the field. Maintain and make available in the field for use by Government personnel until final acceptance of the work.

b. Review of the Contract drawings.

c. Check to assure that all materials and equipment have been tested, submitted, and approved.

d. Review of provisions that have been made to provide required control inspection and testing.

e. Review Special Inspections required by Section 01 45 35 SPECIAL INSPECTIONS, the Statement of Special Inspections and the Schedule of Special Inspections.

f. Examination of the work area to assure that all required preliminary work has been completed and is in compliance with the Contract.

g. Examination of required materials, equipment, and sample work to assure that they are on hand, conform to approved shop drawings or submitted data, and are properly stored.

h. Review of the appropriate activity hazard analysis to assure safety requirements are met.

i. Discussion of procedures for controlling quality of the work including repetitive deficiencies. Document construction tolerances and workmanship standards for that feature of work.

j. Check to ensure that the portion of the plan for the work to be performed has been accepted by the Contracting Officer.

k. Discussion of the initial control phase.

l. The Government needs to be notified at least 8 hours in advance of beginning the preparatory control phase. Include a meeting conducted by the CQC System Manager and attended by the superintendent, other CQC personnel (as applicable), and the foreman responsible for the definable feature. Document the results of the preparatory phase actions by separate minutes prepared by the CQC System Manager and attach to the daily CQC report. Instruct applicable workers as to the acceptable level of workmanship required in order to meet contract specifications.

3.6.2 Initial Phase

This phase is accomplished at the beginning of a definable feature of work. Accomplish the following:

a. Check work to ensure that it is in full compliance with contract requirements. Review minutes of the preparatory meeting.

b. Verify adequacy of controls to ensure full contract compliance. Verify required control inspection and testing are in compliance with the contract.

c. Establish level of workmanship and verify that it meets minimum acceptable workmanship standards. Compare with required sample panels as appropriate.

d. Resolve all differences.

e. Check safety to include compliance with and upgrading of the safety plan and activity hazard analysis. Review the activity analysis with each worker.

f. The Government needs to be notified at least 8 hours in advance of beginning the initial phase for definable feature of work. Prepare separate minutes of this phase by the CQC System Manager and attach to the daily CQC report. Indicate the exact location of initial phase for definable feature of work for future reference and comparison with follow-up phases.

g. The initial phase for each definable feature of work is repeated for each new crew to work onsite, or any time acceptable specified quality standards are not being met.

h. Coordinate scheduled work with Special Inspections required by Section 01 45 35 SPECIAL INSPECTIONS, the Statement of Special Inspections and the Schedule of Special Inspections.

3.6.3 Follow-up Phase

Perform daily checks to assure control activities, including control testing, are providing continued compliance with contract requirements, until completion of the particular feature of work. Record the checks in the CQC documentation. Conduct final follow-up checks and correct all deficiencies prior to the start of additional features of work which may be affected by the deficient work. Do not build upon nor conceal non-conforming work. Coordinate scheduled work with Special Inspections required by Section 01 45 35 SPECIAL INSPECTIONS, the Statement of Special Inspections and the Schedule of Special Inspections.

3.6.4 Additional Preparatory and Initial Phases

Conduct additional preparatory and initial phases on the same definable features of work if: the quality of on-going work is unacceptable; if there are changes in the applicable CQC staff, onsite production supervision or work crew; if work on a definable feature is resumed after a substantial period of inactivity; or if other problems develop.

3.7 TESTS

3.7.1 Testing Procedure

Perform specified or required tests to verify that control measures are adequate to provide a product which conforms to contract requirements. Upon request, furnish to the Government duplicate samples of test specimens for possible testing by the Government. Testing includes operation and acceptance tests when specified. Procure the services of a Corps of Engineers approved testing laboratory or establish an approved testing laboratory at the project site. Perform the following activities and record and provide the following data:

a. Verify that testing procedures comply with contract requirements.

b. Verify that facilities and testing equipment are available and comply with testing standards.

c. Check test instrument calibration data against certified standards.

d. Verify that recording forms and test identification control number system, including all of the test documentation requirements, have been prepared.

e. Record results of all tests taken, both passing and failing on the CQC report for the date taken. Specification paragraph reference, location where tests were taken, and the sequential control number identifying the test. If approved by the Contracting Officer, actual test reports are submitted later with a reference to the test number and date taken. Provide an information copy of tests performed by an offsite or commercial test facility directly to the Contracting Officer. Failure to submit timely test reports as stated results in nonpayment for related work performed and disapproval of the test facility for this Contract.

3.7.2 Testing Laboratories

All testing laboratories must be validated by the USACE Material Testing Center (MTC) for the tests to be performed. Information on the USACE MTC with web-links to both a list of validated testing laboratories and for the laboratory inspection request for can be found at: https://mtc.erdc.dren.mil/.

3.7.2.1 Capability Check

The Government reserves the right to check laboratory equipment in the proposed laboratory for compliance with the standards set forth in the contract specifications and to check the laboratory technician's testing procedures and techniques. Laboratories utilized for testing soils, concrete, asphalt, and steel is required to meet criteria detailed in ASTM D3740 and ASTM E329.

3.7.2.2 Capability Recheck

If the selected laboratory fails the capability check, the Contractor will be assessed a charge of $1,000 to reimburse the Government for each succeeding recheck of the laboratory or the checking of a subsequently selected laboratory. Such costs will be deducted from the Contract amount due the Contractor.

3.7.3 Onsite Laboratory

The Government reserves the right to utilize the Contractor's control testing laboratory and equipment to make assurance tests, and to check the Contractor's testing procedures, techniques, and test results at no additional cost to the Government.

3.8 COMPLETION INSPECTION

3.8.1 Punch-Out Inspection

Conduct an inspection of the work by the CQC System Manager near the end of the work, or any increment of the work established by a time stated in FAR 52.211-10 Commencement, Prosecution, and Completion of Work, or by the specifications. Prepare and include in the CQC documentation a punch list of items which do not conform to the approved drawings and specifications, as required by paragraph DOCUMENTATION. Include within the list of deficiencies the estimated date by which the deficiencies will be

corrected. The CQC System Manager or staff make a second inspection to ascertain that all deficiencies have been corrected. Once this is accomplished, notify the Government that the facility is ready for the Government Pre-Final inspection.

3.8.2 Pre-Final Inspection

The Government will perform the pre-final inspection to verify that the facility is complete and ready to be occupied. A Government Pre-Final Punch List may be developed as a result of this inspection. Ensure that all items on this list have been corrected before notifying the Government, so that a Final inspection with the customer can be scheduled. Correct any items noted on the Pre-Final inspection in a timely manner. These inspections and any deficiency corrections required by this paragraph need to be accomplished within the time slated for completion of the entire work or any particular increment of the work if the project is divided into increments by separate completion dates.

3.8.3 Final Acceptance Inspection

The Contractor's Quality Control Inspection personnel, plus the superintendent or other primary management person, and the Contracting Officer's Representative is required to be in attendance at the final acceptance inspection. Additional Government personnel including, but not limited to, those from Base/Post Civil Facility Engineer user groups, and major commands can also be in attendance. The final acceptance inspection will be formally scheduled by the Contracting Officer based upon results of the Pre-Final inspection. Notify the Contracting Officer at least 14 days prior to the final acceptance inspection and include the Contractor's assurance that all specific items previously identified to the Contractor as being unacceptable, along with all remaining work performed under the Contract, will be complete and acceptable by the date scheduled for the final acceptance inspection. Failure of the Contractor to have all contract work acceptably complete for this inspection will be cause for the Contracting Officer to bill the Contractor for the Government's additional inspection cost in accordance FAR 52.246-12 Inspection of Construction.

3.9 DOCUMENTATION

3.9.1 Quality Control Activities

Maintain current records providing factual evidence that required quality control activities and tests have been performed. Include in these records the work of subcontractors and suppliers on an acceptable form that includes, as a minimum, the following information:

a. The name and area of responsibility of the Contractor/Subcontractor.

b. Operating plant/equipment with hours worked, idle, or down for repair.

c. Work performed each day, giving location, description, and by whom. When Network Analysis (NAS) is used, identify each phase of work performed each day by NAS activity number.

d. Test and control activities performed with results and references to specifications/drawings requirements. Identify the control phase (Preparatory, Initial, Follow-up). List of deficiencies noted, along with corrective action.

e. Quantity of materials received at the site with statement as to acceptability, storage, and reference to specifications/drawings requirements.

f. Submittals and deliverables reviewed, with Contract reference, by whom, and action taken.

g. Offsite surveillance activities, including actions taken.

h. Job safety evaluations stating what was checked, results, and instructions or corrective actions.

i. Instructions given/received and conflicts in plans and specifications.

3.9.2 Verification Statement

Indicate a description of trades working on the project; the number of personnel working; weather conditions encountered; and any delays encountered. Cover both conforming and deficient features and include a statement that equipment and materials incorporated in the work and workmanship comply with the Contract. Furnish the original and one copy of these records in report form to the Government daily within 24 hours after the date covered by the report, except that reports need not be submitted for days on which no work is performed. As a minimum, prepare and submit one report for every 7 days of no work and on the last day of a no work period. All calendar days need to be accounted for throughout the life of the contract. The first report following a day of no work will be for that day only. Reports need to be signed and dated by the Contractor Quality Control(CQC) System Manager. Include copies of test reports and copies of reports prepared by all subordinate quality control personnel within the CQC System Manager Report.

3.10 SAMPLE FORMS

Sample forms enclosed at the end of this section.

3.11 NOTIFICATION OF NONCOMPLIANCE

The Contracting Officer will notify the Contractor of any detected noncompliance with the foregoing requirements. Take immediate corrective action after receipt of such notice. Such notice, when delivered to the Contractor at the work site, will be deemed sufficient for the purpose of notification. If the Contractor fails or refuses to comply promptly, the Contracting Officer can issue an order stopping all or part of the work until satisfactory corrective action has been taken. No part of the time lost due to such stop orders will be made the subject of claim for extension of time or for excess costs or damages by the Contractor.

-- End of Section --

SECTION 01 45 00.15 10

RESIDENT MANAGEMENT SYSTEM CONTRACTOR MODE (RMS CM)
11/16, CHG 2: 08/19

PART 1 GENERAL

1.1 REFERENCES

The publications listed below form a part of this section to the extent referenced. The publications are referred to within the text by the basic designation only.

U.S. ARMY CORPS OF ENGINEERS (USACE)

EM 385-1-1	(2014) Safety -- Safety and Health Requirements Manual

1.2 MEASUREMENT AND PAYMENT

The work of this section is not measured for payment. The Contractor is responsible for the work of this section, without any direct compensation other than the payment received for contract items.

1.3 CONTRACT ADMINISTRATION

The Government will use the Resident Management System (RMS) to assist in its monitoring and administration of this contract. The Government accesses the system using the Government Mode of RMS (RMS GM) and the Contractor accesses the system using the Contractor Mode (RMS CM). The term RMS will be used in the remainder of this section for both RMS GM and RMS CM. The joint Government-Contractor use of RMS facilitates electronic exchange of information and overall management of the contract. The Contractor accesses RMS to record, maintain, input, track, and electronically share information with the Government throughout the contract period in the following areas:

Administration
Finances
Quality Control
Submittal Monitoring
Scheduling
Closeout
Import/Export of Data

1.3.1 Correspondence and Electronic Communications

For ease and speed of communications, exchange correspondence and other documents in electronic format to the maximum extent feasible. Some correspondence, including pay requests and payrolls, are also to be provided in paper format with original signatures. Paper documents will govern, in the event of discrepancy with the electronic version.

1.3.2 Other Factors

Other portions of this document have a direct relationship to the reporting accomplished through RMS. Particular attention is directed to FAR 52.236-15 Schedules for Construction Contracts; FAR 52.232-27 Prompt

Payment for Construction Contracts; FAR 52.232-5 Payments Under Fixed-Priced Construction Contracts; Section 01 32 16.15 PROJECT SCHEDULES; Section 01 33 00 SUBMITTAL PROCEDURES; Section 01 35 26 GOVERNMENTAL SAFETY REQUIREMENTS; and Section 01 45 00.00 10 QUALITY CONTROL.

1.4 RMS SOFTWARE

RMS is a web based application. Download, install and be able to utilize the latest version of RMS within 7 calendar days of receipt of the Notice to Proceed. RMS software, user manuals, access and installation instructions, program updates and training information are available from the RMS website (https://rms.usace.army.mil). The Government and the Contractor will have different access authorities to the same contract database through RMS. The common database will be updated automatically each time a user finalizes an entry or change.

1.5 CONTRACT DATABASE - GOVERNMENT

The Government will enter the basic contract award data in RMS prior to granting the Contractor access. The Government entries into RMS will generally be related to submittal reviews, correspondence status, and Quality Assurance(QA)comments, as well as other miscellaneous administrative information.

1.6 CONTRACT DATABASE - CONTRACTOR

Contractor entries into RMS establish, maintain, and update data throughout the duration of the contract. Contractor entries generally include prime and subcontractor information, daily reports, submittals, RFI's, schedule updates and payment requests. RMS includes the ability to import attachments and export reports in many of the modules, including submittals. The Contractor responsibilities for entries in RMS typically include the following items:

1.6.1 Administration

1.6.1.1 Contractor Information

Enter all current Contractor administrative data and information into RMS within 7 calendar days of receiving access to the contract in RMS. This includes, but is not limited to, Contractor's name, address, telephone numbers, management staff, and other required items.

1.6.1.2 Subcontractor Information

Enter all missing subcontractor administrative data and information into RMS CM within 7 calendar days of receiving access to the contract in RMS or within 7 calendar days of the signing of the subcontractor agreement for agreements signed at a later date. This includes name, trade, address, phone numbers, and other required information for all subcontractors. A subcontractor is listed separately for each trade to be performed.

1.6.1.3 Correspondence

Identify all Contractor correspondence to the Government with a serial number. Prefix correspondence initiated by the Contractor's site office with "S". Prefix letters initiated by the Contractor's home (main) office with "H". Letters are numbered starting from 0001. (e.g., H-0001 or

S-0001). The Government's letters to the Contractor will be prefixed with "C" or "RFP".

1.6.1.4 Equipment

Enter and maintain a current list of equipment planned for use or being used on the jobsite, including the most recent and planned equipment inspection dates.

1.6.1.5 Reports

Track the status of the project utilizing the reports available in RMS. The value of these reports is reflective of the quality of the data input. These reports include the Progress Payment Request worksheet, Quality Control (QC) comments, Submittal Register Status, and Three-Phase Control worksheets.

1.6.1.6 Request For Information (RFI)

Create and track all Requests For Information (RFI) in the RMS Administration Module for Government review and response.

1.6.2 Finances

1.6.2.1 Pay Activity Data

Develop and enter a list of pay activities in conjunction with the project schedule. The sum of pay activities equals the total contract amount, including modifications. Each pay activity must be assigned to a Contract Line Item Number (CLIN). The sum of the activities assigned to a CLIN equals the amount of each CLIN.

1.6.2.2 Payment Requests

Prepare all progress payment requests using RMS. Update the work completed under the contract at least monthly, measured as percent or as specific quantities. After the update, generate a payment request and prompt payment certification using RMS. Submit the signed prompt payment certification and payment request as well as supporting data either electronically or by hard copy. Unless waived by the Contracting Officer, a signed paper copy of the approved payment certification and request is also required and will govern in the event of discrepancy with the electronic version.

1.6.3 Quality Control (QC)

Enter and track implementation of the 3-phase QC Control System, QC testing, transferred and installed property and warranties in RMS. Prepare daily reports, identify and track deficiencies, document progress of work, and support other Contractor QC requirements in RMS. Maintain all data on a daily basis. Insure that RMS reflects all quality control methods, tests and actions contained within the Contractor Quality Control (CQC) Plan and Government review comments of same within 7 calendar days of Government acceptance of the CQC Plan.

1.6.3.1 Quality Control (QC) Reports

The Contractor's Quality Control (QC) Daily Report in RMS is the official report. The Contractor can use other supplemental formats to record QC

data, but information from any supplemental formats are to be consolidated and entered into the RMS QC Daily Report. Any supplemental information may be entered into RMS as an attachment to the report. QC Daily Reports must be finalized and signed in RMS within 24 hours after the date covered by the report. Provide the Government a printed signed copy of the QC Daily Report, unless waived by the Contracting Officer.

1.6.3.2 Deficiency Tracking.

Use the QC Daily Report Module to enter and track deficiencies. Deficiencies identified and entered into RMS by the Contractor or the Government will be sequentially numbered with a QC or QA prefix for tracking purposes. Enter each deficiency into RMS the same day that the deficiency is identified. Monitor, track and resolve all QC and QA entered deficiencies. A deficiency is not considered to be corrected until the Government indicates concurrence in RMS.

1.6.3.3 Three-Phase Control Meetings

Maintain scheduled and actual dates and times of preparatory and initial control meetings in RMS. Worksheets for the three-phase control meetings are generated within RMS.

1.6.3.4 Labor and Equipment Hours

Enter labor and equipment exposure hours on a daily basis. Roll up the labor and equipment exposure data into a monthly exposure report.

1.6.3.5 Accident/Safety Reporting

Both the Contractor and the Government enter safety related comments in RMS as a deficiency. The Contractor must monitor, track and show resolution for safety issues in the QC Daily Report area of the RMS QC Module. In addition, follow all reporting requirements for accidents and incidents as required in EM 385-1-1, Section 01 35 26 GOVERNMENTAL SAFETY REQUIREMENTS and as required by any other applicable Federal, State or local agencies.

1.6.3.6 Definable Features of Work

Enter each feature of work, as defined in the approved CQC Plan, into the RMS QC Module. A feature of work may be associated with a single or multiple pay activities, however a pay activity is only to be linked to a single feature of work.

1.6.3.7 Activity Hazard Analysis

Import activity hazard analysis electronic document files into the RMS QC Module utilizing the document package manager.

1.6.4 Submittal Management

Enter all current submittal register data and information into RMS within 7 calendar days of receiving access to the contract in RMS. Group electronic submittal documents into transmittal packages to send to the Government, except very large electronic files, samples, spare parts, mock ups, color boards, or where hard copies are specifically required. Track transmittals and update the submittal register in RMS on a daily basis throughout the duration of the contract. Submit hard copies of all

submittals unless waived by the Contracting Officer.

1.6.5 Schedule

Enter and update the contract project schedule in RMS by either manually entering all schedule data or by importing the Standard Data Exchange Format (SDEF) file, based on the requirements in Section 01 32 16.15 PROJECT SCHEDULE.

1.6.6 Closeout

Closeout documents, processes and forms are managed and tracked in RMS by both the Contractor and the Government. Ensure that all closeout documents are entered, completed and documented within RMS.

1.7 IMPLEMENTATION

Use of RMS as described in the preceding paragraphs is mandatory. Ensure that sufficient resources are available to maintain contract data within the RMS system. RMS is an integral part of the Contractor's required management of quality control.

1.8 NOTIFICATION OF NONCOMPLIANCE

Take corrective action within 7 calendar days after receipt of notice of RMS non-compliance by the Contracting Officer.

U.S. FEDERAL HIGHWAY ADMINISTRATION (FHWA)

MUTCD	(2009; Rev 2012) Manual on Uniform Traffic Control Devices

1.2 SUBMITTALS

Government approval is required for submittals with a "G" or "S" classification. Submittals not having a "G" or "S" classification are for information only. When used, a code following the "G" classification identifies the office that will review the submittal for the Government. Submit the following in accordance with Section 01 33 00 SUBMITTAL PROCEDURES:

SD-01 Preconstruction Submittals

Construction Site Plan; G

Traffic Control Plan; G

Haul Road Plan; G

Contractor Computer Cybersecurity Compliance Statements; G

Contractor Temporary Network Cybersecurity Compliance Statements; G

SD-06 Test Reports

Backflow Preventer Tests

SD-07 Certificates

Backflow Tester Certification

Backflow Preventers Certificate of Full Approval

1.3 CONSTRUCTION SITE PLAN

Prior to the start of work, submit for Government approval a site plan showing the locations and dimensions of temporary facilities (including layouts and details, equipment and material storage area (onsite and offsite), and access and haul routes, avenues of ingress/egress to the fenced area and details of the fence installation. Identify any areas which may have to be graveled to prevent the tracking of mud. Indicate if the use of a supplemental or other staging area is desired. Show locations of safety and construction fences, site trailers, construction entrances, trash dumpsters, temporary sanitary facilities, and worker parking areas.

1.4 BACKFLOW PREVENTERS CERTIFICATE

1.4.1 Backflow Tester Certificate

Prior to testing, submit to the Contracting Officer certification issued by the State or local regulatory agency attesting that the backflow tester has successfully completed a certification course sponsored by the regulatory agency. Tester must not be affiliated with a company participating in other phases of this Contract.

1.4.2 Backflow Prevention Training Certificate

Submit a certificate recognized by the State or local authority that states the Contractor has completed at least 10 hours of training in backflow preventer installations. The certificate must be current.

1.5 DOD CONDITION OF READINESS (COR)

DOD will set the Condition of Readiness (COR) based on the weather forecast for sustained winds 50 knots (58 mph) or greater. Contact the Contracting Officer for the current COR setting.

Monitor weather conditions a minimum of twice a day and take appropriate actions according to the approved Emergency Plan in the accepted Accident Prevention Plan, EM 385-1-1 Section 01 Emergency Planning and the instructions below.

Unless otherwise directed by the Contracting Officer, comply with:

a. Condition FOUR (Sustained winds of 58 mph or greater expected within 72 hours): Normal daily jobsite cleanup and good housekeeping practices. Collect and store in piles or containers scrap lumber,

waste material, and rubbish for removal and disposal at the close of each work day. Maintain the construction site including storage areas, free of accumulation of debris. Stack form lumber in neat piles less than 3.3 feet high. Remove all debris, trash, or objects that could become missile hazards. Review requirements pertaining to "Condition THREE" and continue action as necessary to attain "Condition FOUR" readiness. Contact Contracting Officer for weather and COR updates and completion of required actions.

b. Condition THREE (Sustained winds of 58 mph or greater expected within 48 hours): Maintain "Condition FOUR" requirements and commence securing operations necessary for "Condition ONE" which cannot be completed within 18 hours. Cease all routine activities which might interfere with securing operations. Commence securing and stow all gear and portable equipment. Make preparations for securing buildings. Reinforce or remove formwork and scaffolding. Secure machinery, tools, equipment, materials, or remove from the jobsite. Expend every effort to clear all missile hazards and loose equipment from general base areas. Contact Contracting Officer for weather and COR updates and completion of required actions. Review requirements pertaining to "Condition TWO" and continue action as necessary to attain "Condition THREE" readiness.

c. Condition TWO (Sustained winds of 58 mph or greater expected within 24 hours): Secure the jobsite, and leave Government premises.

d. Condition ONE. (Sustained winds of 58 mph or greater expected within 12 hours): Contractor access to the jobsite and Government premises is prohibited.

1.6 CYBERSECURITY DURING CONSTRUCTION

{For Reference Only: This subpart (and its subparts) relates to AC-18, SA-3, CCI-00258.} Meet the following requirements throughout the construction process.

1.6.1 Contractor Computer Equipment

Contractor owned computers may be used for construction. When used, contractor computers must meet the following requirements:

1.6.1.1 Operating System

The operating system must be an operating system currently supported by the manufacturer of the operating system. The operating system must be current on security patches and operating system manufacturer required updates.

1.6.1.2 Anti-Malware Software

The computer must run anti-malware software from a reputable software manufacturer. Anti-malware software must be a version currently supported by the software manufacturer, must be current on all patches and updates, and must use the latest definitions file. All computers used on this project must be scanned using the installed software at least once per day.

1.6.1.3 Passwords and Passphrases

The passwords and passphrases for all computers must be changed from their default values. Passwords must be a minimum of eight characters with a minimum of one uppercase letter, one lowercase letter, one number and one special character.

1.6.1.4 Contractor Computer Cybersecurity Compliance Statements

Provide a single submittal containing completed Contractor Computer Cybersecurity Compliance Statements for each company using contractor owned computers. Contractor Computer Cybersecurity Compliance Statements must use the template published at http://www.wbdg.org/ffc/dod/unified-facilities-guide-specifications-ufgs/forms-graphics-tables. Each Statement must be signed by a cybersecurity representative for the relevant company.

1.6.2 Temporary IP Networks

Temporary contractor-installed IP networks may be used during construction. When used, temporary contractor-installed IP networks must meet the following requirements:

1.6.2.1 Network Boundaries and Connections

The network must not extend outside the project site and must not connect to any IP network other than IP networks provided under this project or Government furnished IP networks provided for this purpose. Any and all network access from outside the project site is prohibited.

1.6.3 Government Access to Network

Government personnel, as defined, prescribed, and identified by the Contracting Officer, must be allowed to have complete and immediate access to the network at any time in order to verify compliance with this specification. Or if there is a Government agency that's responsible, identify that agency.

1.6.4 Temporary Wireless IP Networks

In addition to the other requirements on temporary IP networks, temporary wireless IP (WiFi) networks must not interfere with existing wireless network and must use WPA2 security. Network names (SSID) for wireless networks must be changed from their default values.

1.6.5 Passwords and Passphrases

The passwords and passphrases for all network devices and network access must be changed from their default values. Passwords must be a minimum 8 characters with a minimum of one uppercase letter, one lowercase letter, one number and one special character.

1.6.6 Contractor Temporary Network Cybersecurity Compliance Statements

Provide a single submittal containing completed Contractor Temporary Network Cybersecurity Compliance Statements for each company implementing a temporary IP network. Contractor Temporary Network Cybersecurity Compliance Statements must use the template published at http://www.wbdg.org/ffc/dod/unified-facilities-guide-specifications-ufgs/

forms-graphics-tables. Each Statement must be signed by a cybersecurity representative for the relevant company. If no temporary IP networks will be used, provide a single copy of the Statement indicating this.

PART 2 PRODUCTS

2.1 TEMPORARY SIGNAGE

2.1.1 Bulletin Board

Prior to the commencement of work activities, provide a clear weatherproof covered bulletin board not less than 36 by 48 inches in size for displaying the Equal Employment Opportunity poster, a copy of the wage decision contained in the Contract, Wage Rate Information poster, Safety and Health Information as required by EM 385-1-1 Section 01 and other information approved by the Contracting Officer. Coordinate requirements herein with 01 35 26 GOVERNMENTAL SAFETY REQUIREMENTS. Locate the bulletin board at the project site in a conspicuous place easily accessible to all employees, and in location as approved by the Contracting Officer.

2.1.2 Project Identification Signs

The requirements for the signs, their content, and location are as indicated and as specified in Section 01 58 00 PROJECT IDENTIFICATION. Erect signs within 15 days after receipt of the notice to proceed. Correct the data required by the safety sign daily, with light colored metallic or non-metallic numerals.

2.1.3 Warning Signs

Post temporary signs, tags, and labels to give workers and the public adequate warning and caution of construction hazards according to the EM 385-1-1 Section 04. Attach signs to the perimeter fencing every 150 feet warning the public of the presence of construction hazards. Signs must require unauthorized persons to keep out of the construction site. Correct the data required by safety signs daily. Post signs at all points of entry designating the construction site as a hard hat area.

2.2 TEMPORARY TRAFFIC CONTROL

2.2.1 Haul Roads

Construct access and haul roads necessary for proper prosecution of the work under this Contract in accordance with EM 385-1-1 Section 04. Construct with suitable grades and widths; avoid sharp curves, blind corners, and dangerous cross traffic. Submit haul road plan for approval. Provide necessary lighting, signs, barricades, and distinctive markings for the safe movement of traffic. The method of dust control, although optional, must be adequate to ensure safe operation at all times. Location, grade, width, and alignment of construction and haul roads are subject to approval by the Contracting Officer. Lighting must be adequate to assure full and clear visibility for full width of haul road and work areas during any night work operations.

2.2.2 Barricades

Erect and maintain temporary barricades to limit public access to hazardous areas. Barricades are required whenever safe public access to

paved areas such as roads, parking areas or sidewalks is prevented by construction activities or as otherwise necessary to ensure the safety of both pedestrian and vehicular traffic. Securely place barricades clearly visible with adequate illumination to provide sufficient visual warning of the hazard during both day and night.

2.3 FENCING

Provide fencing along the construction site and at all open excavations and tunnels to control access by unauthorized personnel. Safety fencing must be highly visible to be seen by pedestrians and vehicular traffic. All fencing must meet the requirements of EM 385-1-1. Remove the fence upon completion and acceptance of the work.

2.3.1 Polyethylene Mesh Safety Fencing

Temporary safety fencing must be a high visibility orange colored, high density polyethylene grid, a minimum of 48 inches high and maximum mesh size of 2 inches. Fencing must extend from the grade to a minimum of 48 inches above the grade and be tightly secured to T-posts spaced as necessary to maintain a rigid and taut fence. Fencing must remain rigid and taut with a minimum of 200 pounds of force exerted on it from any direction with less than 4 inches of deflection.

2.3.2 Chain Link Panel Fencing

Temporary panel fencing must be galvanized steel chain link panels 6 feet high. Multiple fencing panels may be linked together at the bases to form long spans as needed. Each panel base must be weighted down using sand bags or other suitable materials in order for the fencing to withstand anticipated winds while remaining upright. Fencing must remain rigid and taut with a minimum of 200 pounds of force exerted on it from any direction with less than 4 inches of deflection.

2.3.3 Post-Driven Chain Link Fencing

Temporary post-driven fencing must be galvanized chain link fencing 6 feet high supported by an tightly secured to galvanized steel posts driven below grade. Fence posts must be located on minimum 10 foot centers. Posts may be set in various surfaces such as sand, soil, asphalt or concrete as necessary. Chain link fencing must remain rigid and taut with a minimum of 200 pounds of force exerted on it from any direction with less than 4 inches of deflection. Completely remove fencing and posts at the completion of construction and restore surfaces disturbed or damaged to its original condition. Locate and identify underground utilities prior to setting fence posts. Equip fence with a lockable gate. Gate must remain locked when construction personnel are not present.

2.4 TEMPORARY WIRING

Provide temporary wiring in accordance with EM 385-1-1 Section 11, NFPA 241 and NFPA 70. Include monthly inspection and testing of all equipment and apparatus.

2.5 BACKFLOW PREVENTERS

Certificate of Full Approval from FCCCHR List, University of Southern California, attesting that the design, size and make of each backflow preventer has satisfactorily passed the complete sequence of performance

testing and evaluation for the respective level of approval. Certificate of Provisional Approval is not acceptable.

Reduced pressure principle type conforming to the applicable requirements AWWA C511. Provide backflow preventers complete with 150 pound flanged , mounted gate valve and strainer, 304 stainless steel or bronze, internal parts.

PART 3 EXECUTION

3.1 EMPLOYEE PARKING

Construction Contract employees must park privately owned vehicles in an area designated by the Contracting Officer. Employee parking must not interfere with existing and established parking requirements of the Government installation.

3.2 AVAILABILITY AND USE OF UTILITY SERVICES

3.2.1 Temporary Utilities

Provide temporary utilities required for construction. Materials may be new or used, must be adequate for the required usage, not create unsafe conditions, and not violate applicable codes and standards.

3.2.2 Payment for Utility Services

a. The Government will make all reasonably required utilities available from existing outlets and supplies, as specified in the Contract. Unless otherwise provided in the Contract, the amount of each utility service consumed will be charged to or paid at prevailing rates charged to the Government or, where the utility is produced by the Government, at reasonable rates determined by the Contracting Officer. Carefully conserve utilities furnished without charge.

b. Reasonable amounts of the following utilities will be made available at the prevailing rates.

Utility Services		
	Cost ($) per	Unit
Electricity		
Potable Water		
Salt Water		
Compressed Air		
Steam		
Natural Gas		
Sanitary Sewer		

c. The point at which the Government will deliver such utilities or services and the quantity available is must be coordinated with the Contracting Officer. Pay all costs incurred in connecting,

converting, and transferring the utilities to the work. Make connections, including providing backflow-preventing devices on connections to domestic water lines; providing meters; and providing transformers; and make disconnections.

3.2.3 Meters and Temporary Connections

Provide and maintain necessary temporary connections, distribution lines, and meter bases (Government will provide meters) required to measure the amount of each utility used for the purpose of determining charges. Notify the Contracting Officer, in writing, 5 working days before final electrical connection is desired so that a utilities contract can be established. The Government will provide a meter and make the final hot connection after inspection and approval of the Contractor's temporary wiring installation. Do not make the final electrical connection.

3.2.4 Advance Deposit

An advance deposit for utilities consisting of an estimated month's usage or a minimum of $50.00 will be required. The last monthly bills for the fiscal year will normally be offset by the deposit and adjustments will be billed or returned as appropriate. Services to be rendered for the next fiscal year, beginning 1 October, will require a new deposit. Notification of the due date for this deposit will be mailed prior to the end of the current fiscal year.

3.2.5 Final Meter Reading

Before completion of the work and final acceptance of the work by the Government, notify the Contracting Officer, in writing, 5 working days before termination is desired. The Government will take a final meter reading, disconnect service, and remove the meters. Then remove all the temporary distribution lines, meter bases, and associated appurtenances. Pay all outstanding utility bills before final acceptance of the work by the Government.

3.2.6 Sanitation

Provide and maintain within the construction area minimum field-type sanitary facilities in accordance with EM 385-1-1 Section 02. Locate the facilities behind the construction fence or out of the public view. Clean units and empty wastes at least once a week or more frequently into a municipal, district, or station sanitary sewage system, or remove waste to a commercial facility. Obtain approval from the system owner prior to discharge into a municipal, district, or commercial sanitary sewer system. Penalties or fines associated with improper discharge will be the responsibility of the Contractor. Coordinate with the Contracting Officer and follow station regulations and procedures when discharging into the station sanitary sewer system. Maintain these conveniences at all times. Include provisions for pest control and elimination of odors. Government toilet facilities will not be available to Contractor's personnel.

3.2.7 Telephone

Make arrangements and pay all costs for telephone facilities desired.

3.2.8 Fire Protection

Provide temporary fire protection equipment for the protection of

personnel and property during construction. Remove debris and flammable materials daily to minimize potential hazards.

3.3 STATION OPERATION AFFECT ON CONTRACTOR OPERATIONS

3.3.1 Restricted Access Areas

The Government will monitor work in areas indicated. Notify Contracting Officer at least 14 calendar days prior to starting work in these areas.

3.4 TRAFFIC PROVISIONS

3.4.1 Maintenance of Traffic

a. Conduct operations in a manner that will not close a thoroughfare or interfere with traffic on railways or highways except with written permission of the Contracting Officer at least 15 calendar days prior to the proposed modification date, and provide a Traffic Control Plan for Government approval detailing the proposed controls to traffic movement for approval. The plan must be in accordance with State and local regulations and the MUTCD, Part VI. Make all notifications and obtain all permits required for modification to traffic movements outside Station's jurisdiction.. Contractor may move oversized and slow-moving vehicles to the worksite provided requirements of the highway authority have been met.

b. Conduct work so as to minimize obstruction of traffic, and maintain traffic on at least half of the roadway width at all times. Obtain approval from the Contracting Officer prior to starting any activity that will obstruct traffic.

c. Provide, erect, and maintain, at Contractor's expense, lights, barriers, signals, passageways, detours, and other items, that may be required by the Life Safety Signage, overhead protection authority having jurisdiction.

d. Provide cones, signs, barricades, lights, or other traffic control devices and personnel required to control traffic. Do not use foil-backed material for temporary pavement marking because of its potential to conduct electricity during accidents involving downed power lines.

3.4.2 Protection of Traffic

Maintain and protect traffic on all affected roads during the construction period except as otherwise specifically directed by the Contracting Officer. Measures for the protection and diversion of traffic, including the provision of watchmen and flagmen, erection of barricades, placing of lights around and in front of equipment the work, and the erection and maintenance of adequate warning, danger, and direction signs, will be as required by the State and local authorities having jurisdiction. Provide self-illuminated (lighted) barricades during hours of darkness. Brightly-colored (orange) vests are required for all personnel working in roadways. Protect the traveling public from damage to person and property. Minimize the interference with public traffic on roads selected for hauling material to and from the site. Investigate the adequacy of existing roads and their allowable load limit. Contractor is responsible for the repair of damage to roads caused by construction operations.

3.4.3 Rush Hour Restrictions

Do not interfere with the peak traffic flows preceding and during normal operations without notification to and approval by the Contracting Officer.

3.4.4 Dust Control

Dust control methods and procedures must be approved by the Contracting Officer. Coordinate dust control methods with 01 57 19 TEMPORARY ENVIRONMENTAL CONTROLS.

3.5 REDUCED PRESSURE BACKFLOW PREVENTERS

Provide an approved reduced pressure backflow prevention assembly at each location where the Contractor taps into the Government potable water supply.

Perform backflow preventer tests using test equipment, procedures, and certification forms conforming to those outlined in the latest edition of the Manual of Cross-Connection Control published by the FCCCHR Manual. Test and tag each reduced pressure backflow preventer upon initial installation (prior to continued water use) and semi-annually thereafter. Tag must contain the following information: make, model, serial number, dates of tests, results, maintenance performed, and signature of tester. Record test results on certification forms conforming to requirements cited earlier in this paragraph.

3.6 CONTRACTOR'S TEMPORARY FACILITIES

Contractor-owned or -leased trailers must be identified by Government assigned numbers. Size and location of the number will comply with . Apply the number to the trailer within 14 calendar days of notification, or sooner, if directed by the Government. Temporary facilities must meet requirements as identified in EM 385-1-1 Section 04.

Contractor is responsible for security of their property. Provide adequate outside security lighting at the temporary facilities. Trailers must be anchored to resist high winds and meet applicable state or local standards for anchoring mobile trailers. Coordinate anchoring with EM 385-1-1 Section 04. The Contract Clause entitled "FAR 52.236-10, Operations and Storage Areas" and the following apply:

3.6.1 Administrative Field Offices

Provide and maintain administrative field office facilities within the construction area at the designated site. Government office and warehouse facilities will not be available to the Contractor's personnel.

In the event a new building is constructed for the temporary project field office, it must be a minimum 12 feet in width, 16 feet in length and have a minimum of 7 feet headroom. Equip the building with approved electrical wiring, at least one double convenience outlet and the required switches and fuses to provide 110-120 volt power. Provide a work table with stool, desk with chair, two additional chairs, and one legal size file cabinet that can be locked. The building must be waterproof, supplied with a heater, have a minimum of two doors, electric lights, a telephone, a battery-operated smoke detector alarm, a sufficient number of adjustable windows for adequate light and ventilation, and a supply of approved drinking water. Provide approved sanitary facilities. Screen the windows

and doors and provide the doors with deadbolt type locking devices or a padlock and heavy-duty hasp bolted to the door. Door hinge pins must be non-removable. Arrange the windows to open and to be securely fastened from the inside. Protect glass panels in windows by bars or heavy mesh screens to prevent easy access. In warm weather, provide air conditioning capable of maintaining the office at 50 percent relative humidity and a room temperature 20 degrees F below the outside temperature when the outside temperature is 95 degrees F. Unless otherwise directed by the Contracting Officer, remove the building from the site upon completion and acceptance of the work.

3.6.2 Storage Area

Construct a temporary 6 foot high chain link fence around trailers and materials. Include plastic strip inserts, colored green or brown, so that visibility through the fence is obstructed. Fence posts may be driven, in lieu of concrete bases, where soil conditions permit. Do not place or store trailers, materials, or equipment outside the fenced area unless such trailers, materials, or equipment are assigned a separate and distinct storage area by the Contracting Officer away from the vicinity of the construction site but within the installation boundaries. Trailers, equipment, or materials must not be open to public view with the exception of those items which are in support of ongoing work on the current day. Do not stockpile materials outside the fence in preparation for the next day's work. Park mobile equipment, such as tractors, wheeled lifting equipment, cranes, trucks, and like equipment within the fenced area at the end of each work day.

Keep fencing in a state of good repair and proper alignment. If the Contractor elects to traverse grassed or unpaved areas which are not established roadways with construction equipment or other vehicles, cover the grassed or unpaved areas with a layer of gravel as necessary to prevent rutting and the tracking of mud onto paved or established roadways; gravel gradation must be at the Contractor's discretion.. Mow and maintain grass located within the boundaries of the construction site for the duration of the project. Grass and vegetation along fences, structures, under trailers, and in areas not accessible to mowers must be edged or trimmed neatly.

3.6.3 Supplemental Storage Area

Upon request, and pending availability, the Contracting Officer will designate another or supplemental area for the use and storage of trailers, equipment, and materials. This area may not be in close proximity of the construction site but will be within the installation boundaries. Maintain the area in a clean and orderly fashion and secured if needed to protect supplies and equipment. Utilities will not be provided to this area by the Government.

3.6.4 Appearance of Trailers

a. Trailers must be roadworthy and comply with all appropriate state and local vehicle requirements. Trailers which are rusted, have peeling paint or are otherwise in need of repair will not be allowed on Installation property. Trailers must present a clean and neat exterior appearance and be in a state of good repair.

b. Maintain the temporary facilities. Failure to do so will be sufficient reason to require their removal at the Contractor's expense.

3.6.5 Safety Systems

Protect the integrity of all installed safety systems or personnel safety devices. Obtain prior approval from the Contracting Officer if entrance into systems serving safety devices is required. If it is temporarily necessary to remove or disable personnel safety devices in order to accomplish Contract requirements, provide alternative means of protection prior to removing or disabling any permanently installed safety devices or equipment and obtain approval from the Contracting Officer.

3.6.6 Weather Protection of Temporary Facilities and Stored Materials

Take necessary precautions to ensure that roof openings and other critical openings in the building are monitored carefully. Take immediate actions required to seal off such openings when rain or other detrimental weather is imminent, and at the end of each workday. Ensure that the openings are completely sealed off to protect materials and equipment in the building from damage.

3.6.6.1 Building and Site Storm Protection

When a warning of gale force winds is issued, take precautions to minimize danger to persons, and protect the work and nearby Government property. Precautions must include, but are not limited to, closing openings; removing loose materials, tools and equipment from exposed locations; and removing or securing scaffolding and other temporary work. Close openings in the work when storms of lesser intensity pose a threat to the work or any nearby Government property.

3.7 GOVERNMENT FIELD OFFICE

3.7.1 Resident Engineer's Office

Provide the Government Resident Engineer with an office, approximately 200 square feet in floor area, located where directed and providing space heat, air conditioning unit, electric light and power, and toilet facilities consisting of one lavatory and one water closet complete with connections to water and sewer mains. Provide a mail slot in the door or a lockable mail box mounted on the surface of the door. Include a 4 by 8 foot plan table, computer work space, a standard size office desk and chair, and telephone. At completion of the project, the office will remain the property of the Contractor and be removed from the site. Utilities must be connected and disconnected in accordance with local codes and to the satisfaction of the Contracting Officer. Compliance with safety and appearance requirements for temporary facilities stated in previous paragraphs is required.

3.7.2 Trailer-Type Mobile Office

The option is available to, furnish and maintain a trailer-type mobile office acceptable to the Contracting Officer to meet the requirements of the minimum facilities specified above. Securely anchor the trailer to the ground at all four corners to guard against movement during high winds. Coordinate requirements for proper anchoring with EM 385-1-1 Section 04.

3.8 PLANT COMMUNICATIONS

Whenever the individual elements of the plant are located so that operation by normal voice between these elements is not satisfactory, install a satisfactory means of communication, such as telephone or other suitable devices and make available for use by Government personnel.

3.9 TEMPORARY PROJECT SAFETY FENCING

As soon as practicable, but not later than 15 days after the date established for commencement of work, furnish and erect temporary project safety fencing at the work site. Maintain the safety fencing during the life of the Contract and, upon completion and acceptance of the work, remove from the work site.

3.10 CLEANUP

Remove construction debris, waste materials, packaging material and the like from the work site daily. Any dirt or mud which is tracked onto paved or surfaced roadways must be cleaned away. Store all salvageable materials resulting from demolition activities within the fenced area described above or at the supplemental storage area. Neatly stack stored materials not in trailers, whether new or salvaged.

3.11 RESTORATION OF STORAGE AREA

Upon completion of the project remove the bulletin board, signs, barricades, haul roads, and all other temporary products from the site. After removal of trailers, materials, and equipment from within the fenced area, remove the fence. Restore areas used during the performance of the Contract to the original or better condition. Remove gravel used to traverse grassed areas and restore the area to its original condition, including top soil and seeding as necessary.

-- End of Section --

SECTION 01 57 19

TEMPORARY ENVIRONMENTAL CONTROLS
11/15, CHG 5: 08/21

1.2 DEFINITIONS

1.2.1 Class I and II Ozone Depleting Substance (ODS)

Class I ODS is defined in Section 602(a) of The Clean Air Act. A list of Class I ODS can be found on the EPA website at the following weblink. https://www.epa.gov/ozone-layer-protection/ozone-depleting-substances.

Class II ODS is defined in Section 602(s) of The Clean Air Act. A list of Class II ODS can be found on the EPA website at the following weblink. https://www.epa.gov/ozone-layer-protection/ozone-depleting-substances.

1.2.2 Contractor Generated Hazardous Waste

Contractor generated hazardous waste is materials that, if abandoned or disposed of, may meet the definition of a hazardous waste. These waste streams would typically consist of material brought on site by the Contractor to execute work, but are not fully consumed during the course of construction. Examples include, but are not limited to, excess paint thinners (i.e. methyl ethyl ketone, toluene), waste thinners, excess paints, excess solvents, waste solvents, excess pesticides, and contaminated pesticide equipment rinse water.

1.2.3 Electronics Waste

Electronics waste is discarded electronic devices intended for salvage, recycling, or disposal.

1.2.4 Environmental Pollution and Damage

Environmental pollution and damage is the presence of chemical, physical, or biological elements or agents which adversely affect human health or welfare; unfavorably alter ecological balances of importance to human life; affect other species of importance to humankind; or degrade the environment aesthetically, culturally or historically.

1.2.5 Environmental Protection

Environmental protection is the prevention/control of pollution and habitat disruption that may occur to the environment during construction. The control of environmental pollution and damage requires consideration of land, water, and air; biological and cultural resources; and includes management of visual aesthetics; noise; solid, chemical, gaseous, and liquid waste; radiant energy and radioactive material as well as other pollutants.

1.2.6 Hazardous Debris

As defined in paragraph SOLID WASTE, debris that contains listed hazardous waste (either on the debris surface, or in its interstices, such as pore structure) in accordance with 40 CFR 261. Hazardous debris also includes debris that exhibits a characteristic of hazardous waste in accordance with 40 CFR 261.

1.2.7 Hazardous Materials

Hazardous materials as defined in 49 CFR 171 and listed in 49 CFR 172.

Hazardous material is any material that: Is regulated as a hazardous material in accordance with 49 CFR 173; or requires a Safety Data Sheet (SDS) in accordance with 29 CFR 1910.120; or during end use, treatment, handling, packaging, storage, transportation, or disposal meets or has components that meet or have potential to meet the definition of a hazardous waste as defined by 40 CFR 261 Subparts A, B, C, or D. Designation of a material by this definition, when separately regulated or controlled by other sections or directives, does not eliminate the need for adherence to that hazard-specific guidance which takes precedence over this section for "control" purposes. Such material includes ammunition, weapons, explosive actuated devices, propellants, pyrotechnics, chemical and biological warfare materials, medical and pharmaceutical supplies, medical waste and infectious materials, bulk fuels, radioactive materials, and other materials such as asbestos, mercury, and polychlorinated biphenyls (PCBs).

1.2.8 Hazardous Waste

Hazardous Waste is any material that meets the definition of a solid waste and exhibit a hazardous characteristic (ignitability, corrosivity, reactivity, or toxicity) as specified in 40 CFR 261, Subpart C, or contains a listed hazardous waste as identified in 40 CFR 261, Subpart D.

1.2.9 Land Application

Land Application means spreading or spraying discharge water at a rate that allows the water to percolate into the soil. No sheeting action, soil erosion, discharge into storm sewers, discharge into defined drainage areas, or discharge into the "waters of the United States" must occur. Comply with federal, state, and local laws and regulations.

1.2.10 Municipal Separate Storm Sewer System (MS4) Permit

MS4 permits are those held by installations to obtain NPDES permit coverage for their stormwater discharges.

1.2.11 National Pollutant Discharge Elimination System (NPDES)

The NPDES permit program controls water pollution by regulating point sources that discharge pollutants into waters of the United States.

1.2.12 Oily Waste

Oily waste are those materials that are, or were, mixed with Petroleum, Oils, and Lubricants (POLs) and have become separated from that POLs. Oily wastes also means materials, including wastewaters, centrifuge solids, filter residues or sludges, bottom sediments, tank bottoms, and sorbents which have come into contact with and have been contaminated by, POLs and may be appropriately tested and discarded in a manner which is in compliance with other state and local requirements.

This definition includes materials such as oily rags, "kitty litter" sorbent clay and organic sorbent material. These materials may be land filled provided that: It is not prohibited in other state regulations or local ordinances; the amount generated is "de minimus" (a small amount); it is the result of minor leaks or spills resulting from normal process operations; and free-flowing oil has been removed to the practicable extent possible. Large quantities of this material, generated as a result of a major spill or in lieu of proper maintenance of the processing equipment, are a solid waste. As a solid waste, perform a hazardous waste determination prior to disposal. As this can be an expensive process, it is recommended that this type of waste be minimized through good housekeeping practices and employee education.

1.2.13 Regulated Waste

Regulated waste are solid wastes that have specific additional federal, state, or local controls for handling, storage, or disposal.

1.2.14 Sediment

Sediment is soil and other debris that have eroded and have been transported by runoff water or wind.

1.2.15 Solid Waste

Solid waste is a solid, liquid, semi-solid or contained gaseous waste. A solid waste can be a hazardous waste, non-hazardous waste, or non-Resource Conservation and Recovery Act (RCRA) regulated waste. Types of solid waste typically generated at construction sites may include:

1.2.15.1 Debris

Debris is non-hazardous solid material generated during the construction, demolition, or renovation of a structure that exceeds 2.5-inch particle size that is: a manufactured object; plant or animal matter; or natural geologic material (for example, cobbles and boulders), broken or removed concrete, masonry, and rock asphalt paving; ceramics; roofing paper and shingles. Inert materials may not be reinforced with or contain ferrous wire, rods, accessories and weldments. A mixture of debris and other material such as soil or sludge is also subject to regulation as debris if the mixture is comprised primarily of debris by volume, based on visual inspection.

1.2.15.2 Green Waste

Green waste is the vegetative matter from landscaping, land clearing and grubbing, including, but not limited to, grass, bushes, scrubs, small trees and saplings, tree stumps and plant roots. Marketable trees, grasses and plants that are indicated to remain, be re-located, or be re-used are not included.

1.2.15.3 Material Not Regulated As Solid Waste

Material not regulated as solid waste is nuclear source or byproduct materials regulated under the Federal Atomic Energy Act of 1954 as amended; suspended or dissolved materials in domestic sewage effluent or irrigation return flows, or other regulated point source discharges; regulated air emissions; and fluids or wastes associated with natural gas or crude oil exploration or production.

1.2.15.4 Non-Hazardous Waste

Non-hazardous waste is waste that is excluded from, or does not meet, hazardous waste criteria in accordance with 40 CFR 263.

1.2.15.5 Recyclables

Recyclables are materials, equipment and assemblies such as doors, windows, door and window frames, plumbing fixtures, glazing and mirrors that are recovered and sold as recyclable, wiring, insulated/non-insulated copper wire cable, wire rope, and structural components. It also includes commercial-grade refrigeration equipment with Freon removed, household appliances where the basic material content is metal, clean polyethylene terephthalate bottles, cooking oil, used fuel oil, textiles, high-grade paper products and corrugated cardboard, stackable pallets in good condition, clean crating material, and clean rubber/vehicle tires. Metal meeting the definition of lead contaminated or lead based paint contaminated may be included as recyclable if sold to a scrap metal company. Paint cans that meet the definition of empty containers in accordance with 40 CFR 261.7 may be included as recyclable if sold to a scrap metal company.

1.2.15.6 Surplus Soil

Surplus soil is existing soil that is in excess of what is required for this work, including aggregates intended, but not used, for on-site mixing of concrete, mortars, and paving. Contaminated soil meeting the definition of hazardous material or hazardous waste is not included and must be managed in accordance with paragraph HAZARDOUS MATERIAL MANAGEMENT.

1.2.15.7 Scrap Metal

This includes scrap and excess ferrous and non-ferrous metals such as reinforcing steel, structural shapes, pipe, and wire that are recovered or collected and disposed of as scrap. Scrap metal meeting the definition of hazardous material or hazardous waste is not included.

1.2.15.8 Wood

Wood is dimension and non-dimension lumber, plywood, chipboard, hardboard. Treated or painted wood that meets the definition of lead contaminated or lead based contaminated paint is not included. Treated

wood includes, but is not limited to, lumber, utility poles, crossties, and other wood products with chemical treatment.

1.2.16 Surface Discharge

Surface discharge means discharge of water into drainage ditches, storm sewers, creeks or "waters of the United States". Surface discharges are discrete, identifiable sources and require a permit from the governing agency. Comply with federal, state, and local laws and regulations.

1.2.17 Wastewater

Wastewater is the used water and solids from a community that flow to a treatment plant.

1.2.17.1 Stormwater

Stormwater is any precipitation in an urban or suburban area that does not evaporate or soak into the ground, but instead collects and flows into storm drains, rivers, and streams.

1.2.18 Waters of the United States

Waters of the United States means Federally jurisdictional waters, including wetlands, that are subject to regulation under Section 404 of the Clean Water Act or navigable waters, as defined under the Rivers and Harbors Act.

1.2.19 Wetlands

Wetlands are those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions.

1.2.20 Universal Waste

The universal waste regulations streamline collection requirements for certain hazardous wastes in the following categories: batteries, pesticides, mercury-containing equipment (for example, thermostats), and lamps (for example, fluorescent bulbs). The rule is designed to reduce hazardous waste in the municipal solid waste (MSW) stream by making it easier for universal waste handlers to collect these items and send them for recycling or proper disposal. These regulations can be found at 40 CFR 273.

1.3 SUBMITTALS

Government approval is required for submittals with a "G" or "S" classification. Submittals not having a "G" or "S" classification are for information only. When used, a code following the "G" classification identifies the office that will review the submittal for the Government. Submit the following in accordance with Section 01 33 00 SUBMITTAL PROCEDURES:

SD-01 Preconstruction Submittals

Preconstruction Survey

Solid Waste Management Permit; G

Regulatory Notifications; G

Environmental Protection Plan; G, ECGE

Stormwater Pollution Prevention Plan (SWPPP); G, ECGE

Stormwater Notice of Intent (for NPDES coverage under the general permit for construction activities); G, ECGE

Dirt and Dust Control Plan; G, ECGE

Employee Training Records; G, ECGE

Environmental Manager Qualifications; G, ECGE

SD-06 Test Reports

Laboratory Analysis: G, ECGE

Inspection Reports

Monthly Solid Waste Disposal Report; G

SD-07 Certificates

Employee Training Records; G

Certificate of Competency

Erosion and Sediment Control Inspector Qualifications

SD-11 Closeout Submittals

Stormwater Pollution Prevention Plan Compliance Notebook; G

Stormwater Notice of Termination (for NPDES coverage under the general permit for construction activities); G

Waste Determination Documentation; G

Disposal Documentation for Hazardous and Regulated Waste; G

Assembled Employee Training Records; G

Solid Waste Management Permit; G
Project Solid Waste Disposal Documentation Report; G

Contractor Hazardous Material Inventory Log; G

Hazardous Waste/Debris Management; G, ECGE

Regulatory Notifications; G

Sales Documentation; G

Contractor Certification

1.4 ENVIRONMENTAL PROTECTION REQUIREMENTS

Provide and maintain, during the life of the contract, environmental protection as defined. Plan for and provide environmental protective measures to control pollution that develops during construction practice. Plan for and provide environmental protective measures required to correct conditions that develop during the construction of permanent or temporary environmental features associated with the project. Protect the environmental resources within the project boundaries and those affected outside the limits of permanent work during the entire duration of this Contract. Comply with federal, state, and local regulations pertaining to the environment, including water, air, solid waste, hazardous waste and substances, oily substances, and noise pollution.

Tests and procedures assessing whether construction operations comply with Applicable Environmental Laws may be required. Analytical work must be performed by qualified laboratories; and where required by law, the laboratories must be certified.

1.4.1 Conformance with the Environmental Management System

Perform work under this contract consistent with the policy and objectives identified in the VA's Environmental Management System (EMS). Perform work in a manner that conforms to objectives and targets of the environmental programs and operational controls identified by the EMS. Support Government personnel when environmental compliance and EMS audits are conducted by escorting auditors at the Project site, answering questions, and providing proof of records being maintained. Provide monitoring and measurement information as necessary to address environmental performance relative to environmental, energy, and transportation management goals. In the event an EMS nonconformance or environmental noncompliance associated with the contracted services, tasks, or actions occurs, take corrective and preventative actions. In addition, employees must be aware of their roles and responsibilities under the VA EMS and of how these EMS roles and responsibilities affect work performed under the contract.

Coordinate with the VA's EMS coordinator to identify training needs associated with environmental aspects and the EMS, and arrange training or take other action to meet these needs. Provide training documentation to the Contracting Officer. The VA Environmental Office will retain associated environmental compliance records. Make EMS Awareness training completion certificates available to Government auditors during EMS audits and include the certificates in the Employee Training Records. See paragraph EMPLOYEE TRAINING RECORDS.

1.5 QUALITY ASSURANCE

1.5.1 Preconstruction Survey and Protection of Features

This paragraph supplements the Contract Clause PROTECTION OF EXISTING VEGETATION, STRUCTURES, EQUIPMENT, UTILITIES, AND IMPROVEMENTS. Prior to start of any onsite construction activities, perform a Preconstruction Survey of the project site with the Contracting Officer, and take photographs showing existing environmental conditions in and adjacent to the site. Submit a report for the record. Include in the report a plan describing the features requiring protection under the provisions of the

Contract Clauses, which are not specifically identified on the drawings as environmental features requiring protection along with the condition of trees, shrubs and grassed areas immediately adjacent to the site of work and adjacent to the Contractor's assigned storage area and access route(s), as applicable. The Contractor and the Contracting Officer will sign this survey report upon mutual agreement regarding its accuracy and completeness. Protect those environmental features included in the survey report and any indicated on the drawings, regardless of interference that their preservation may cause to the work under the Contract.

1.5.2 Regulatory Notifications

Provide regulatory notification requirements in accordance with federal, state and local regulations. In cases where the Government will also provide public notification (such as stormwater permitting), coordinate with the Contracting Officer. Submit copies of regulatory notifications to the Contracting Officer at least 10 days prior to commencement of work activities. Typically, regulatory notifications must be provided for the following (this listing is not all-inclusive): demolition, renovation, NPDES defined site work, construction, removal or use of a permitted air emissions source, and remediation of controlled substances (asbestos, hazardous waste, lead paint).

1.5.3 Environmental Brief

Attend an environmental brief to be included in the preconstruction meeting. Provide the following information: types, quantities, and use of hazardous materials that will be brought onto the VA; and types and quantities of wastes/wastewater that may be generated during the Contract. Discuss the results of the Preconstruction Survey at this time.

Prior to initiating any work on site, meet with the Contracting Officer and VA Environmental Office to discuss the proposed Environmental Protection Plan (EPP). Develop a mutual understanding relative to the details of environmental protection, including measures for protecting natural and cultural resources, required reports, required permits, permit requirements (such as mitigation measures), and other measures to be taken.

1.5.4 Environmental Manager

Appoint in writing an Environmental Manager for the project site. The Environmental Manager is directly responsible for coordinating contractor compliance with federal, state, local, and VA requirements. The Environmental Manager must ensure compliance with Hazardous Waste Program requirements (including hazardous waste handling, storage, manifesting, and disposal); implement the EPP; ensure environmental permits are obtained, maintained, and closed out; ensure compliance with Stormwater Program requirements; ensure compliance with Hazardous Materials (storage, handling, and reporting) requirements; and coordinate any remediation of regulated substances (lead, asbestos, PCB transformers). This can be a collateral position; however, the person in this position must be trained to adequately accomplish the following duties: ensure waste segregation and storage compatibility requirements are met; inspect and manage Satellite Accumulation areas; ensure only authorized personnel add wastes to containers; ensure Contractor personnel are trained in 40 CFR requirements in accordance with their position requirements; coordinate removal of waste containers; and maintain the Environmental Records binder and required documentation, including environmental permits compliance and close-out. Submit Environmental Manager Qualifications to the Contracting

Officer.

1.5.5 Employee Training Records

Prepare and maintain Employee Training Records throughout the term of the contract meeting applicable 40 CFR requirements. Provide Employee Training Records in the Environmental Records Binder. Ensure every employee completes a program of classroom instruction or on-the-job training that teaches them to perform their duties in a way that ensures compliance with federal, state and local regulatory requirements for RCRA Large Quantity Generator. Provide a Position Description for each employee, by subcontractor, based on the Davis-Bacon Wage Rate designation or other equivalent method, evaluating the employee's association with hazardous and regulated wastes. This Position Description will include training requirements as defined in 40 CFR 265 for a Large Quantity Generator facility. Submit these Assembled Employee Training Records to the Contracting Officer at the conclusion of the project, unless otherwise directed.

Train personnel to meet EPA requirements. Conduct environmental protection/pollution control meetings for personnel prior to commencing construction activities. Conduct additional meetings for new personnel and when site conditions change. Include in the training and meeting agenda: methods of detecting and avoiding pollution; familiarization with statutory and contractual pollution standards; VA and care of devices, vegetative covers, and instruments required for monitoring purposes to ensure adequate and continuous environmental protection/pollution control; anticipated hazardous or toxic chemicals or wastes, and other regulated contaminants; recognition and protection of archaeological sites, artifacts, waters of the United States, and endangered species and their habitat that are known to be in the area. Provide copy of the Erosion and Sediment Control Inspector Qualifications as defined by EPA.

1.5.6 Non-Compliance Notifications

The Contracting Officer will notify the Contractor in writing of any observed noncompliance with federal, state or local environmental laws or regulations, permits, and other elements of the Contractor's EPP. After receipt of such notice, inform the Contracting Officer of the proposed corrective action and take such action when approved by the Contracting Officer. The Contracting Officer may issue an order stopping all or part of the work until satisfactory corrective action has been taken. FAR 52.242-14 Suspension of Work provides that a suspension, delay, or interruption of work due to the fault or negligence of the Contractor allows for no adjustments to the contract for time extensions or equitable adjustments. In addition to a suspension of work, the Contracting Officer may use additional authorities under the contract or law.

1.6 ENVIRONMENTAL PROTECTION PLAN

The purpose of the EPP is to present an overview of known or potential environmental issues that must be considered and addressed during construction. Incorporate construction related objectives and targets from the VA's EMS into the EPP. Include in the EPP measures for protecting natural and cultural resources, required reports, and other measures to be taken. Meet with the Contracting Officer or Contracting Officer Representative to discuss the EPP and develop a mutual understanding relative to the details for environmental protection including measures for protecting natural resources, required reports, and

other measures to be taken. Submit the EPP within 15 days after notice to proceed and not less than 10 days before the preconstruction meeting. Revise the EPP throughout the project to include any reporting requirements, changes in site conditions, or contract modifications that change the project scope of work in a way that could have an environmental impact. No requirement in this section will relieve the Contractor of any applicable federal, state, and local environmental protection laws and regulations. During Construction, identify, implement, and submit for approval any additional requirements to be included in the EPP. Maintain the current version onsite.

The EPP includes, but is not limited to, the following elements:

1.6.1 General Overview and Purpose

1.6.1.1 Descriptions

A brief description of each specific plan required by environmental permit or elsewhere in this Contract such as stormwater pollution prevention plan, spill control plan, solid waste management plan, wastewater management plan, air pollution control plan, contaminant prevention plan, a historical, archaeological, cultural resources, biological resources and wetlands plan, traffic control plan Hazardous, Toxic and Radioactive Waste (HTRW) Plan Non-Hazardous Solid Waste Disposal Plan borrowing material plan.

1.6.1.2 Duties

The duties and level of authority assigned to the person(s) on the job site who oversee environmental compliance, such as who is responsible for adherence to the EPP, who is responsible for spill cleanup and training personnel on spill response procedures, who is responsible for manifesting hazardous waste to be removed from the site (if applicable), and who is responsible for training the Contractor's environmental protection personnel.

1.6.1.3 Procedures

A copy of any standard or project-specific operating procedures that will be used to effectively manage and protect the environment on the project site.

1.6.1.4 Communications

Communication and training procedures that will be used to convey environmental management requirements to Contractor employees and subcontractors.

1.6.1.5 Contact Information

Emergency contact information contact information (office phone number, cell phone number, and e-mail address).

1.6.2 General Site Information

1.6.2.1 Drawings

Drawings showing locations of proposed temporary excavations or embankments for haul roads, stream crossings, jurisdictional wetlands, material storage areas, structures, sanitary facilities, storm drains and

conveyances, and stockpiles of excess soil.

1.6.2.2 Work Area

Work area plan showing the proposed activity in each portion of the area and identify the areas of limited use or nonuse. Include measures for marking the limits of use areas, including methods for protection of features to be preserved within authorized work areas and methods to control runoff and to contain materials on site, and a traffic control plan.

1.6.2.3 Documentation

A letter signed by an officer of the firm appointing the Environmental Manager and stating that person is responsible for managing and implementing the Environmental Program as described in this contract. Include in this letter the Environmental Manager's authority to direct the removal and replacement of non-conforming work.

1.6.3 Management of Natural Resources

a. Land resources

b. Tree protection

c. Replacement of damaged landscape features

d. Temporary construction

e. Stream crossings

f. Fish and wildlife resources

g. Wetland areas

1.6.4 Protection of Historical and Archaeological Resources

a. Objectives

b. Methods

1.6.5 Stormwater Management and Control

a. Ground cover

b. Erodible soils

c. Temporary measures

(1) Structural Practices

(2) Temporary and permanent stabilization

d. Effective selection, implementation and maintenance of Best Management Practices (BMPs).

1.6.6 Protection of the Environment from Waste Derived from Contractor Operations

Control and disposal of solid and sanitary waste. Control and disposal of hazardous waste.

This item consist of the management procedures for hazardous waste to be generated. The elements of those procedures will coincide with the VA Hazardous Waste Management Plan. The Contracting Officer will provide a copy of the VA Hazardous Waste Management Plan. As a minimum, include the following:

a. List of the types of hazardous wastes expected to be generated

b. Procedures to ensure a written waste determination is made for appropriate wastes that are to be generated

c. Sampling/analysis plan, including laboratory method(s) that will be used for waste determinations and copies of relevant laboratory certifications

d. Methods and proposed locations for hazardous waste accumulation/storage (that is, in tanks or containers)

e. Management procedures for storage, labeling, transportation, and disposal of waste (treatment of waste is not allowed unless specifically noted)

f. Management procedures and regulatory documentation ensuring disposal of hazardous waste complies with Land Disposal Restrictions (40 CFR 268)

g. Management procedures for recyclable hazardous materials such as lead-acid batteries, used oil, and similar

h. Used oil management procedures in accordance with 40 CFR 279; Hazardous waste minimization procedures

i. Plans for the disposal of hazardous waste by permitted facilities; and Procedures to be employed to ensure required employee training records are maintained.

1.6.7 Prevention of Releases to the Environment

Procedures to prevent releases to the environment

Notifications in the event of a release to the environment

1.6.8 Regulatory Notification and Permits

List what notifications and permit applications must be made. Some permits require up to 180 days to obtain. Demonstrate that those permits have been obtained or applied for by including copies of applicable environmental permits. The EPP will not be approved until the permits have been obtained.

1.6.9 Clean Air Act Compliance

1.6.9.1 Haul Route

Submit truck and material haul routes along with a Dirt and Dust Control Plan for controlling dirt, debris, and dust on VA roadways. As a minimum, identify in the plan the subcontractor and equipment for cleaning along the haul route and measures to reduce dirt, dust, and debris from roadways.

1.6.9.2 Pollution Generating Equipment

Identify air pollution generating equipment or processes that may require federal, state, or local permits under the Clean Air Act. Determine requirements based on any current VA permits and the impacts of the project. Provide a list of all fixed or mobile equipment, machinery or operations that could generate air emissions during the project to the VA Environmental Office (Air Program Manager).

1.6.9.3 Stationary Internal Combustion Engines

Identify portable and stationary internal combustion engines that will be supplied, used or serviced. Comply with 40 CFR 60 Subpart IIII, 40 CFR 60 Subpart JJJJ, 40 CFR 63 Subpart ZZZZ, and local regulations as applicable. At minimum, include the make, model, serial number, manufacture date, size (engine brake horsepower), and EPA emission certification status of each engine. Maintain applicable records and log hours of operation and fuel use. Logs must include reasons for operation and delineate between emergency and non-emergency operation.

1.6.9.4 Refrigerants

Identify management practices to ensure that heating, ventilation, and air conditioning (HVAC) work involving refrigerants complies with 40 CFR 82 requirements. Technicians must be certified, maintain copies of certification on site, use certified equipment and log work that requires the addition or removal of refrigerant. Any refrigerant reclaimed is the property of the Government, coordinate with the VA Environmental Office to determine the appropriate turn in location.

1.6.9.5 Air Pollution-engineering Processes

Identify planned air pollution-generating processes and management control measures (including, but not limited to, spray painting, abrasive blasting, demolition, material handling, fugitive dust, and fugitive emissions). Log hours of operations and track quantities of materials used.

1.6.9.6 Compliant Materials

Provide the Government a list of SDSs for all hazardous materials proposed for use on site. Materials must be compliant with all Clean Air Act regulations for emissions including solvent and volatile organic compound contents, and applicable National Emission Standards for Hazardous Air Pollutants requirements. The Government may alter or limit use of specific materials as needed to meet VA permit requirements for emissions.

1.7 LICENSES AND PERMITS

Obtain licenses and permits required for the construction of the project

and in accordance with FAR 52.236-7 Permits and Responsibilities. Notify the Government of all general use permitted equipment the Contractor plans to use on site. This paragraph supplements the Contractor's responsibility under FAR 52.236-7 Permits and Responsibilities.

1.8 ENVIRONMENTAL RECORDS BINDER

Maintain on-site a separate three-ring Environmental Records Binder and submit at the completion of the project. Make separate parts within the binder that correspond to each submittal listed under paragraph CLOSEOUT SUBMITTALS in this section.

1.9 SOLID WASTE MANAGEMENT PERMIT

Provide the Contracting Officer with written notification of the quantity of anticipated solid waste or debris that is anticipated or estimated to be generated by construction. Include in the report the locations where various types of waste will be disposed or recycled. Include letters of acceptance from the receiving location or as applicable; submit one copy of the receiving location state and local Solid Waste Management Permit or license showing such agency's approval of the disposal plan before transporting wastes off Government property.

1.9.1 Monthly Solid Waste Disposal Report

Monthly, submit a solid waste disposal report to the Contracting Officer. For each waste, the report will state the classification (using the definitions provided in this section), amount, location, and name of the business receiving the solid waste.

PART 2 PRODUCTS

Not Used

PART 3 EXECUTION

3.1 PROTECTION OF NATURAL RESOURCES

Minimize interference with, disturbance to, and damage to fish, wildlife, and plants, including their habitats. Prior to the commencement of activities, consult with the VA Environmental Office, regarding rare species or sensitive habitats that need to be protected. The protection of rare, threatened, and endangered animal and plant species identified, including their habitats, is the Contractor's responsibility.

Preserve the natural resources within the project boundaries and outside the limits of permanent work. Restore to an equivalent or improved condition upon completion of work that is consistent with the requirements of the VA Environmental Office or as otherwise specified. Confine construction activities to within the limits of the work indicated or specified.

3.1.1 Vegetation

Except in areas to be cleared, do not remove, cut, deface, injure, or destroy trees or shrubs without the Contracting Officer's permission. Do not fasten or attach ropes, cables, or guys to existing nearby trees for anchorages unless authorized by the Contracting Officer. Where such use of attached ropes, cables, or guys is authorized, the Contractor is

responsible for any resultant damage.

Protect existing trees that are to remain to ensure they are not injured, bruised, defaced, or otherwise damaged by construction operations. Remove displaced rocks from uncleared areas. Coordinate with the Contracting Officer and VA Environmental Office to determine appropriate action for trees and other landscape features scarred or damaged by equipment operations.

3.2 PROTECTION OF CULTURAL RESOURCES

If, during excavation or other construction activities, any previously unidentified or unanticipated historical, archaeological, and cultural resources are discovered or found, activities that may damage or alter such resources will be suspended. Resources covered by this paragraph include, but are not limited to: any human skeletal remains or burials; artifacts; shell, midden, bone, charcoal, or other deposits; rock or coral alignments, pavings, wall, or other constructed features; and any indication of agricultural or other human activities. Upon such discovery or find, immediately notify the Contracting Officer so that the appropriate authorities may be notified and a determination made as to their significance and what, if any, special disposition of the finds should be made. Cease all activities that may result in impact to or the destruction of these resources. Secure the area and prevent employees or other persons from trespassing on, removing, or otherwise disturbing such resources. The Government retains ownership and control over archaeological resources.

3.3 STORMWATER

Do not discharge stormwater from construction sites to the sanitary sewer. If the water is noted or suspected of being contaminated, it may only be released to the storm drain system if the discharge is specifically permitted. Obtain authorization in advance from the VA Environmental Office for any release of contaminated water.

3.3.1 Construction General Permit

Provide a Construction General Permit as required by 40 CFR 122.26 or EPA General Permit (2022 NPDES CGP). Under the terms and conditions of the permit, install, inspect, maintain BMPs, prepare stormwater erosion and sediment control inspection reports, and submit SWPPP inspection reports. Maintain construction operations and management in compliance with the terms and conditions of the general permit for stormwater discharges from construction activities.

3.3.1.1 Stormwater Pollution Prevention Plan

Submit a project-specific Stormwater Pollution Prevention Plan (SWPPP) to the Contracting Officer for approval, within 30 days of Contract Award and prior to the commencement of work. The SWPPP must meet the requirements of 40 CFR 122.26 and the EPA General Permit for stormwater discharges from construction sites.

Include the following:

a. Comply with terms of the EPA general permit for stormwater discharges from construction activities. Prepare SWPPP in accordance with EPA requirements. Use EPA guide Developing your Stormwater Pollution

Prevention Plan located at https://www.epa.gov/npdes/developing-stormwater-pollution-prevention-plan-swppp to prepare the SWPPP.

b. Select applicable BMPs from EPA Fact Sheets located at https://www.epa.gov/npdes/national-menu-best-management-practices-bmps-stormwater#constr or in accordance with applicable state or local requirements.

c. Include a completed copy of the Notice of Intent, BMP Inspection Report Template, and Stormwater Notice of Termination, except for the effective date.

3.3.1.2 Stormwater Notice of Intent for Construction Activities

Prepare and submit the Notice of Intent for NPDES coverage under the general permit for construction activities to the Contracting Officer for review and approval.

Submit the approved NOI and appropriate permit fees onto the appropriate federal or state agency for approval. No land disturbing activities may commence without permit coverage. Maintain an approved copy of the SWPPP at the onsite construction office, and continually update as regulations require, reflecting current site conditions.

3.3.1.3 Inspection Reports

Submit "Inspection Reports" to the Contracting Officer in accordance with EPA Construction General Permit.

3.3.1.4 Stormwater Pollution Prevention Plan Compliance Notebook

Create and maintain a three ring binder of documents that demonstrate compliance with the Construction General Permit. Include a copy of the permit Notice of Intent, proof of permit fee payment, SWPPP and SWPPP update amendments, inspection reports and related corrective action records, copies of correspondence with the EPA, and a copy of the permit Notice of Termination in the binder. At project completion, the notebook becomes property of the Government. Provide the compliance notebook to the Contracting Officer.

3.3.1.5 Stormwater Notice of Termination for Construction Activities

Submit a Notice of Termination to the Contracting Officer for approval once construction is complete and final stabilization has been achieved on all portions of the site for which the permittee is responsible. Once approved, submit the Notice of Termination to the appropriate state or federal agency. Prepare as-built topographic survey information required by the permitting agency for certification of the stormwater management system, and provide to the Contracting Officer.

3.3.2 Erosion and Sediment Control Measures

Provide erosion and sediment control measures in accordance with state and local laws and regulations. Preserve vegetation to the maximum extent practicable.

Erosion control inspection reports may be compiled as part of a stormwater pollution prevention plan inspection reports.

3.3.2.1 Sediment Control Practices

Implement sediment control practices to divert flows from exposed soils, temporarily store flows, or otherwise limit runoff and the discharge of pollutants from exposed areas of the site. Implement sediment control practices prior to soil disturbance and prior to creating areas with concentrated flow, during the construction process to minimize erosion and sediment laden runoff. Include the following devices: silt fence, temporary diversion dikes, storm drain inlet protection,

3.3.3 Work Area Limits

Mark the areas that need not be disturbed under this Contract prior to commencing construction activities. Mark or fence isolated areas within the general work area that are not to be disturbed. Protect monuments and markers before construction operations commence. Where construction operations are to be conducted during darkness, any markers must be visible in the dark. Personnel must be knowledgeable of the purpose for marking and protecting particular objects.

3.3.4 Contractor Facilities and Work Areas

Place field offices, staging areas, stockpile storage, and temporary buildings in areas designated on the drawings or as directed by the Contracting Officer. Move or relocate the Contractor facilities only when approved by the Government. Provide erosion and sediment controls for onsite borrow and spoil areas to prevent sediment from entering nearby waters. Control temporary excavation and embankments for plant or work areas to protect adjacent areas.

3.3.5 Municipal Separate Storm Sewer System (MS4) Management

Comply with the VA's MS4 permit requirements.

3.4 AIR RESOURCES

Equipment operation, activities, or processes will be in accordance with 40 CFR 64 and state air emission and performance laws and standards.

3.4.1 Preconstruction Air Permits

Notify the Air Program Manager, through the Contracting Officer, at least 6 months prior to bringing equipment, assembled or unassembled, onto the VA, so that air permits can be secured. Necessary permitting time must be considered in regard to construction activities. Clean Air Act (CAA) permits must be obtained prior to bringing equipment, assembled or unassembled, onto the VA.

3.4.2 Oil or Dual-fuel Boilers and Furnaces

Provide product data and details for new, replacement, or relocated fuel fired boilers, heaters, or furnaces to the VA Environmental Office (Air Program Manager) through the Contracting Officer. Data to be reported include: equipment purpose (water heater, building heat, process), manufacturer, model number, serial number, fuel type (oil type, gas type) size (MMBTU heat input). Provide in accordance with paragraph PRECONSTRUCTION AIR PERMITS.

3.4.3 Burning

Burning is prohibited on the Government premises.

3.4.4 Class I and II ODS Prohibition

Class I and II ODS are Government property and must be returned to the Government for appropriate management. Coordinate with the VA Environmental Office to determine the appropriate location for turn in of all reclaimed refrigerant.

3.4.5 Accidental Venting of Refrigerant

Accidental venting of a refrigerant is a release and must be reported immediately to the Contracting Officer.

3.4.6 EPA Certification Requirements

Heating and air conditioning technicians must be certified through an EPA-approved program. Maintain copies of certifications at the employees' places of business; technicians must carry certification wallet cards, as provided by environmental law.

3.4.7 Dust Control

Keep dust down at all times, including during nonworking periods. Sprinkle or treat, with dust suppressants, the soil at the site, haul roads, and other areas disturbed by operations. Dry power brooming will not be permitted. Instead, use vacuuming, wet mopping, wet sweeping, or wet power brooming. Air blowing will be permitted only for cleaning nonparticulate debris such as steel reinforcing bars. Only wet cutting will be permitted for cutting concrete blocks, concrete, and bituminous concrete. Do not unnecessarily shake bags of cement, concrete mortar, or plaster. Since these products contain Crystalline Silica, comply with the applicable OSHA standard, 29 CFR 1910.1053 or 29 CFR 1926.1153 for controlling exposure to Crystalline Silica Dust.

3.4.7.1 Particulates

Dust particles, aerosols and gaseous by-products from construction activities, and processing and preparation of materials (such as from asphaltic batch plants) must be controlled at all times, including weekends, holidays, and hours when work is not in progress. Maintain excavations, stockpiles, haul roads, permanent and temporary access roads, plant sites, spoil areas, borrow areas, and other work areas within or outside the project boundaries free from particulates that would exceed 40 CFR 50, state, and local air pollution standards or that would cause a hazard or a nuisance. Sprinkling, chemical treatment of an approved type, baghouse, scrubbers, electrostatic precipitators, or other methods will be permitted to control particulates in the work area. Sprinkling, to be efficient, must be repeated to keep the disturbed area damp. Provide sufficient, competent equipment available to accomplish these tasks. Perform particulate control as the work proceeds and whenever a particulate nuisance or hazard occurs. Comply with state and local visibility regulations.

3.4.7.2 Abrasive Blasting

Blasting operations cannot be performed without prior approval of the VA

Air Program Manager. The use of silica sand is prohibited in sandblasting.

Provide tarpaulin drop cloths and windscreens to enclose abrasive blasting operations to confine and collect dust, abrasive agent, paint chips, and other debris. Perform work involving removal of hazardous material in accordance with 29 CFR 1910.

3.4.8 Odors

Control odors from construction activities. The odors must be in compliance with state regulations and local ordinances and may not constitute a health hazard.

3.5 REQUIREMENTS FOR OFFSITE SOILS AND ROCK FROM NON-COMMERCIAL BORROW SOURCES

Offsite soils and rock from non-commercial borrow sites shall be certified for use in one of the following ways:

1. A Phase 1 Environmental Site Assessment (ESA) in accordance with ASTM 1527-05 or 2247-08 (depending on the locality of the borrow area) shall be conducted on the borrow area to prove that the borrow area has had no impact from industrial, chemical or waste disposal activities.

2. The borrow soils shall be tested for Total Petroleum Hydrocarbons (TPH EPA Method 418.1), Semi Volatile Organics (EPA Method 8270D), Volatile Organics (EPA Method 8260B), Pesticides (EPA Method 8081A), Herbicides (EPA Method 8151A), Polychlorinated Biphenyls (PCB EPA Method 8082) and the Priority Pollutant Metals (EPA Method 245.1). Representative discrete samples shall be of actual borrow material to be used for project, be collected at the borrow area while the potential fill material is still in place, and analyzed prior to removal from the borrow area. Testing and sampling shall be conducted no more than 6 months prior to the use of the borrow soil. Composite sampling for fill material is not appropriate as losses of volatile and semi-volatile analytes can occur. The number of samples required shall be in accordance with the following Sampling Frequency Table.

Sampling Frequency Table

Area of Individual Borrow Area	**Sampling Requirements**
2 Acres or Less	Minimum of 4 Discrete Samples
2 to 4 Acres	Minimum of 1 Discrete Sample Every 1/2 Acre
4 to 10 Acres	Minimum of 8 Discrete Samples
Greater than 10 Acres	Minimum of 8 Discrete Samples with 4 Subsamples per Location
Volume of Borrow Area Stockpile	**Samples per Volume**
Up to 1,000 Cubic Yards (~1,500 Tons)	1 Sample/250 Cubic Yards (~375 Tons)

1,000 to 5,000 Cubic Yards	4 Samples for first 1000 Cubic Yards + 1 Sample per each additional 500 CY
Greater than 5,000 Cubic Yards	12 Samples for First 5,000 CY + 1 Sample for Each Additional 1,000 CY

The Contractor shall provide Phase 1 Environmental Site Assessment of Non-Commercial Borrow Site for Offsite Materials and/or Non-Commercial Borrow Site Testing for Offsite Materials to the Contracting Officer and Environmental Engineering within 10 calendar days of conclusion of Phase 1 ESA/results or analytical testing. The analytical results shall be provided as a standard laboratory data package, including a summary of the Quality Assurance/Quality Control (QA/QC) sample results. The sample results shall accompany all analytical reports.

The Contractor shall not transport off site non-commercial borrow material onsite until the use of this material has been approved by the Contracting Officer.

3.5.1 REQUIREMENTS FOR OFF-SITE SOILS AND ROCK FROM COMMERCIAL BORROW SOURCES

The Contractor shall provide Clean Borrow Certification for Commercial Borrow Sites that demonstrates that the borrow material is free of all contamination. The Contractor shall not transport any off-site commercial borrow material until the use of this material is approved by the Contracting Officer.

3.6 REQUIREMENTS FOR ON-SITE SOILS AND ROCK FROM A NON-COMMERCIAL BORROW SOURCE

The Contractor shall have approval from the Contracting Officer before any on-site soils and rock are used for project construction purposes. The Contractor shall provide the Clean Borrow Certification for On-Site Materials and/or Phase 1 Environmental Site Assessment for On-Site Materials that demonstrates the borrow material is free of all contamination in accordance with the provisions of Section 3.5, Requirements for Off-Site Soils from a Non-Commercial Borrow Source shall be met.

3.7 WASTE MINIMIZATION

Minimize the use of hazardous materials and the generation of waste. Include procedures for pollution prevention/ hazardous waste minimization in the Hazardous Waste Management Section of the EPP. Obtain a copy of the VA's Pollution Prevention/Hazardous Waste Minimization Plan for reference material when preparing this part of the EPP. If no written plan exists, obtain information by contacting the Contracting Officer. Describe the anticipated types of the hazardous materials to be used in the construction when requesting information.

3.7.1 Salvage, Reuse and Recycle

Identify anticipated materials and waste for salvage, reuse, and recycling. Describe actions to promote material reuse, resale or recycling. To the extent practicable, all scrap metal must be sent for reuse or recycling and will not be disposed of in a landfill.

Include the name, physical address, and telephone number of the hauler, if

transported by a franchised solid waste hauler. Include the destination and, unless exempted, provide a copy of the state or local permit (cover) or license for recycling.

3.7.2 Nonhazardous Solid Waste Diversion Report

Maintain an inventory of nonhazardous solid waste diversion and disposal of construction and demolition debris. Submit a report to the Contracting Officer on the first working day after each fiscal year quarter, starting the first quarter that nonhazardous solid waste has been generated. Include the following in the report:

Construction and Demolition (C&D) Debris Disposed	cubic yards, as appropriate
C&D Debris Recycled	tons, as appropriate
C&D Debris Composted	cubic yards, as appropriate
Total C&D Debris Generated	tons, as appropriate
Waste Sent to Waste-To-Energy Incineration Plant (This amount should not be included in the recycled amount)	tons, as appropriate

3.8 WASTE MANAGEMENT AND DISPOSAL

3.8.1 Waste Determination Documentation

Complete a Waste Determination form (provided at the pre-construction conference) for Contractor-derived wastes to be generated. All potentially hazardous solid waste streams that are not subject to a specific exclusion or exemption from the hazardous waste regulations (e.g. scrap metal, domestic sewage) or subject to special rules, (lead-acid batteries and precious metals) must be characterized in accordance with the requirements of 40 CFR 261 or corresponding applicable state or local regulations. Base waste determination on user knowledge of the processes and materials used, and analytical data when necessary. Consult with the VA environmental staff for guidance on specific requirements. Attach support documentation to the Waste Determination form. As a minimum, provide a Waste Determination form for the following waste (this listing is not inclusive): oil- and latex -based painting and caulking products, solvents, adhesives, aerosols, petroleum products, and containers of the original materials.

3.8.2 Solid Waste Management

3.8.2.1 Project Solid Waste Disposal Documentation Report

Provide copies of the waste handling facilities' weight tickets, receipts, bills of sale, and other sales documentation. In lieu of sales documentation, a statement indicating the disposal location for the solid waste that is signed by an employee authorized to legally obligate or bind the firm may be submitted. The sales documentation Contractor certification must include the receiver's tax identification number and business, EPA or state registration number, along with the receiver's delivery and business addresses and telephone numbers. For each solid waste retained for the Contractor's own use, submit the information previously described in this paragraph on the solid waste disposal report. Prices paid or received do not have to be reported to the Contracting Officer unless required by other provisions or specifications of this Contract or public law.

3.8.2.2 Control and Management of Solid Wastes

Pick up solid wastes, and place in covered containers that are regularly

emptied. Do not prepare or cook food on the project site. Prevent contamination of the site or other areas when handling and disposing of wastes. At project completion, leave the areas clean. Employ segregation measures so that no hazardous or toxic waste will become co-mingled with non-hazardous solid waste. Transport solid waste off Government property and dispose of it in compliance with 40 CFR 260, state, and local requirements for solid waste disposal. A Subtitle D RCRA permitted landfill is the minimum acceptable offsite solid waste disposal option. Verify that the selected transporters and disposal facilities have the necessary permits and licenses to operate. Solid waste disposal offsite must comply with most stringent local, state, and federal requirements, including 40 CFR 241, 40 CFR 243, and 40 CFR 258.

Manage hazardous material used in construction, including but not limited to, aerosol cans, waste paint, cleaning solvents, contaminated brushes, and used rags, in accordance with 49 CFR 173.

3.8.3 Control and Management of Hazardous Waste

Do not dispose of hazardous waste on Government property. Do not discharge any waste to a sanitary sewer, storm drain, or to surface waters or conduct waste treatment or disposal on Government property without written approval of the Contracting Officer.

3.8.3.1 Hazardous Waste/Debris Management

Identify construction activities that will generate hazardous waste or debris. Provide a documented waste determination for resultant waste streams. Identify, label, handle, store, and dispose of hazardous waste or debris in accordance with federal, state, and local regulations, including 40 CFR 261, 40 CFR 262, 40 CFR 263, 40 CFR 264, 40 CFR 265, 40 CFR 266, and 40 CFR 268.

Manage hazardous waste in accordance with the approved Hazardous Waste Management Section of the EPP. Store hazardous wastes in approved containers in accordance with 49 CFR 173 and 49 CFR 178. Hazardous waste generated within the confines of Government facilities is identified as being generated by the Government. Prior to removal of any hazardous waste from Government property, hazardous waste manifests must be signed by personnel from the VA Environmental Office. Do not bring hazardous waste onto Government property. Provide the Contracting Officer with a copy of waste determination documentation for any solid waste streams that have any potential to be hazardous waste or contain any chemical constituents listed in 40 CFR 372-SUBPART D.

3.8.3.2 Waste Storage/Satellite Accumulation/90 Day Storage Areas

Accumulate hazardous waste at satellite accumulation points and in compliance with 40 CFR 262.34 and applicable state or local regulations. Individual waste streams will be limited to 55 gallons of accumulation (or 1 quart for acutely hazardous wastes). If the Contractor expects to generate hazardous waste at a rate and quantity that makes satellite accumulation impractical, the Contractor may request a temporary 90 day accumulation point be established. Submit a request in writing to the Contracting Officer and provide the following information (Attach Site Plan to the Request):

Contract Number	
Contractor	
Haz/Waste or Regulated Waste POC	
Phone Number	
Type of Waste	
Source of Waste	
Emergency POC	
Phone Number	
Location of the Site	

Attach a Waste Determination form for the expected waste streams. Allow 10 working days for processing this request. Additional compliance requirements (e.g. training and contingency planning) that may be required are the responsibility of the Contractor. Barricade the designated area where waste is being stored and post a sign identifying as follows:

"DANGER - UNAUTHORIZED PERSONNEL KEEP OUT"

3.8.3.3 Hazardous Waste Disposal

3.8.3.3.1 Responsibilities for Contractor's Disposal

Provide hazardous waste manifest to the Installations Environmental Office for review, approval, and signature prior to shipping waste off Government property.

3.8.3.3.1.1 Services

Provide service necessary for the final treatment or disposal of the hazardous material or waste in accordance with 40 CFR 260, local, and state, laws and regulations, and the terms and conditions of the Contract within 60 days after the materials have been generated. These services include necessary personnel, labor, transportation, packaging, detailed analysis (if required for disposal or transportation, include manifesting or complete waste profile sheets, equipment, and compile documentation).

3.8.3.3.1.2 Samples

Obtain a representative sample of the material generated for each job done to provide waste stream determination.

3.8.3.3.1.3 Analysis

Analyze each sample taken and provide analytical results to the Contracting Officer. See paragraph WASTE DETERMINATION DOCUMENTATION.

3.8.3.3.1.4 Labeling

Determine the Department of Transportation's (DOT's) proper shipping names for waste (each container requiring disposal) and demonstrate to the

Contracting Officer how this determination is developed and supported by the sampling and analysis requirements contained herein. Label all containers of hazardous waste with the words "Hazardous Waste" or other words to describe the contents of the container in accordance with 40 CFR 262.31 and applicable state or local regulations.

3.8.3.3.2 Contractor Disposal Turn-In Requirements

Hazardous waste generated must be disposed of in accordance with the following conditions to meet VA requirements:

a. Drums must be compatible with waste contents and drums must meet DOT requirements for 49 CFR 173 for transportation of materials.

b. Band drums to wooden pallets.

c. No more than three 55 gallon drums or two 85 gallon over packs are to be banded to a pallet.

d. Band using 1-1/4 inch minimum band on upper third of drum.

e. Provide label in accordance with 49 CFR 172.101.

f. Leave 3 to 5 inches of empty space above volume of material.

3.8.3.4 Universal Waste Management

Manage the following categories of universal waste in accordance with federal, state, and local requirements and VA instructions:

a. Batteries as described in 40 CFR 273.2

b. Lamps as described in 40 CFR 273.5

c. Mercury-containing equipment as described in 40 CFR 273.4

Mercury is prohibited in the construction of this facility, unless specified otherwise, and with the exception of mercury vapor lamps and fluorescent lamps. Dumping of mercury-containing materials and devices such as mercury vapor lamps, fluorescent lamps, and mercury switches, in rubbish containers is prohibited. Remove without breaking, pack to prevent breakage, and transport out of the activity in an unbroken condition for disposal as directed.

3.8.3.5 Electronics End-of-Life Management

Recycle or dispose of electronics waste, including, but not limited to, used electronic devices such computers, monitors, hard-copy devices, televisions, mobile devices, in accordance with 40 CFR 260-262, state, and local requirements, and VA instructions.

3.8.3.6 Disposal Documentation for Hazardous and Regulated Waste

Contact the Contracting Officer for the facility RCRA identification number that is to be used on each manifest.

3.8.4 Releases/Spills of Oil and Hazardous Substances

3.8.4.1 Response and Notifications

Exercise due diligence to prevent, contain, and respond to spills of hazardous material, hazardous substances, hazardous waste, sewage, regulated gas, petroleum, lubrication oil, and other substances regulated in accordance with 40 CFR 300. Maintain spill cleanup equipment and materials at the work site. In the event of a spill, take prompt, effective action to stop, contain, curtail, or otherwise limit the amount, duration, and severity of the spill/release. In the event of any releases of oil and hazardous substances, chemicals, or gases; immediately (within 15 minutes) notify the VA Fire Department, the VA Command Duty Officer, the VA Environmental Office, the Contracting Officer and the state or local authority.

Submit verbal and written notifications as required by the federal (40 CFR 300.125 and 40 CFR 355), state, local regulations and instructions. Provide copies of the written notification and documentation that a verbal notification was made within 20 days. Spill response must be in accordance with 40 CFR 300 and applicable state and local regulations. Contain and clean up these spills without cost to the Government.

3.8.4.2 Clean Up

Clean up hazardous and non-hazardous waste spills. Reimburse the Government for costs incurred including sample analysis materials, clothing, equipment, and labor if the Government will initiate its own spill cleanup procedures, for Contractor- responsible spills, when: Spill cleanup procedures have not begun within one hour of spill discovery/occurrence; or, in the Government's judgment, spill cleanup is inadequate and the spill remains a threat to human health or the environment.

3.8.5 Mercury Materials

Immediately report to the Environmental Office and the Contracting Officer instances of breakage or mercury spillage. Clean mercury spill area to the satisfaction of the Contracting Officer.

Do not recycle a mercury spill cleanup; manage it as a hazardous waste for disposal.

3.8.6 Wastewater

3.8.6.1 Disposal of Wastewater

Disposal of wastewater must be as specified below.

3.8.6.1.1 Treatment

Do not allow wastewater from construction activities, such as onsite material processing, concrete curing, foundation and concrete clean-up, water used in concrete trucks, and forms to enter water ways or to be discharged prior to being treated to remove pollutants. Dispose of the construction- related waste water off-Government property in accordance with 40 CFR 403, state, regional, and local laws and regulations.

3.8.6.1.2 Surface Discharge

For discharge of ground water, Surface discharge in accordance with the requirements of the NPDES or state STORMWATER DISCHARGES FROM CONSTRUCTION SITES permit.

3.8.6.1.3 Land Application

Water generated from the flushing of lines after disinfection or disinfection in conjunction with hydrostatic testing must be discharged into the sanitary sewer with prior approval and notification to the Wastewater Treatment Plant's Operator.

3.9 HAZARDOUS MATERIAL MANAGEMENT

Include hazardous material control procedures in the Safety Plan, in accordance with Section 01 35 26 GOVERNMENTAL SAFETY REQUIREMENTS. Address procedures and proper handling of hazardous materials, including the appropriate transportation requirements. Do not bring hazardous material onto Government property that does not directly relate to requirements for the performance of this contract. Submit an SDS and estimated quantities to be used for each hazardous material to the Contracting Officer prior to bringing the material on the VA. Typical materials requiring SDS and quantity reporting include, but are not limited to, oil and latex based painting and caulking products, solvents, adhesives, aerosol, and petroleum products. Use hazardous materials in a manner that minimizes the amount of hazardous waste generated. Containers of hazardous materials must have National Fire Protection Association labels or their equivalent. Certify that hazardous materials removed from the site are hazardous materials and do not meet the definition of hazardous waste, in accordance with 40 CFR 261.

3.9.1 Contractor Hazardous Material Inventory Log

Submit the "Contractor Hazardous Material Inventory Log"(found at: http://www.wbdg.org/ffc/dod/unified-facilities-guide-specifications-ufgs/forms-graphics-tables), which provides information required by (EPCRA Sections 312 and 313) along with corresponding SDS, to the Contracting Officer at the start and at the end of construction (30 days from final acceptance), and update no later than January 31 of each calendar year during the life of the contract. Keep copies of the SDSs for hazardous materials onsite. At the end of the project, provide the Contracting Officer with copies of the SDSs, and the maximum quantity of each material that was present at the site at any one time, the dates the material was present, the amount of each material that was used during the project, and how the material was used.

The Contracting Officer may request documentation for any spills or releases, environmental reports, or off-site transfers.

3.10 PREVIOUSLY USED EQUIPMENT

Clean previously used construction equipment prior to bringing it onto the project site. Equipment must be free from soil residuals, egg deposits from plant pests, noxious weeds, and plant seeds. Consult with the U.S. Department of Agriculture jurisdictional office for additional cleaning requirements.

3.11 CONTROL AND MANAGEMENT OF ASBESTOS-CONTAINING MATERIAL (ACM)

Manage and dispose of asbestos- containing waste in accordance with 40 CFR 61. Successful bidder shall incorporate Section 02 82 00 ASBESTOS ABATEMENT into the design specs if any asbestos abatement is required. Manifest asbestos-containing waste and provide the manifest to the Contracting Officer. Notifications to the state and VA Air Program Manager are required before starting any asbestos work.

a. Asbestos Abatement Survey reports can be found in Appendices A and B.

b. Designated Competent Person: Qualified in accordance with 29 CFR 1926.32 and 29 CFR 1926.1101, has EPA MAP "Contractor/Supervisor" training accreditation, has EPA/State certification/license as a "Contractor/Supervisor" and is experienced in the administration and supervision of asbestos abatement projects, including exposure assessment and monitoring, work practices, abatement methods, protective measures for personnel, setting up and inspecting asbestos abatement work areas, evaluating the integrity of containment barriers, placement and operation of local exhaust systems, ACM generated waste containment and disposal procedures, decontamination units VA and maintenance requirements, site safety and health requirements, notification of other employees onsite, etc. The Designated Competent Person shall be responsible for compliance with applicable federal, state and local requirements, the Contractor's Accident Prevention Plan (APP) and Asbestos Hazard Abatement Plan (AHAP). Submit the "Contractor/Supervisor" course completion certificate and the most recent certificate for required refresher training, with the employee "Certificate of Worker Acknowledgment". Submit evidence that this person has a minimum of 2 years of on-the-job asbestos abatement experience relevant to OSHA competent person requirements. The Designated Competent Person shall be onsite at all times during the conduct of this project.

c. Project and Other Supervisors: Have EPA MAP "Contractor/Supervisor" training accreditation. Submit the "Contractor/Supervisor" course completion certificate and the most recent certificate for required refresher training, EPA/State certification/license with the employee "Certificate of Worker Acknowledgment". Also submit evidence that the Project Supervisor has a minimum of 2 years of on-the-job asbestos abatement experience relevant to project supervisor responsibilities and the other supervisors have a minimum of 1 year on-the-job asbestos abatement experience commensurate with the responsibilities they will have on this project.

d. Designated Industrial Hygienist: Resume for the Industrial Hygienist (IH) selected to prepare the Contractor's AHAP, prepare and perform training, direct air monitoring and assist the Contractor's Competent Person in implementing and ensuring that safety and health requirements are complied with during the performance of all required work. The Designated IH shall be a person who is board certified in the practice of industrial hygiene or board eligible (meets all education and experience requirements) as determined and documented by the American Board of Industrial Hygiene (ABIH), has EPA MAP "Contractor/Supervisor" training accreditation, has EPA/State certification/license, and has a minimum of 2 years of comprehensive experience in planning and overseeing asbestos abatement activities. Submit the "Contractor/Supervisor" course completion certificate and the most recent certificate for required refresher training and

EPA/State certification/license with the employee "Certificate of Worker Acknowledgment". The Designated IH shall be completely independent from the Contractor according to federal, state, or local regulations; that is, shall not be a Contractor's employee or be an employee or principal of a firm in a business relationship with the Contractor negating such independent status. A copy of the Designated IH's current valid ABIH certification shall be included.

e. Asbestos Abatement Workers: Meet the requirements contained in 29 CFR 1926.1101, 40 CFR 61, Subpart M, and other applicable federal, state and local requirements. Worker training documentation shall be provided as required on the "Certificate of Workers Acknowledgment". Training documentation is required for each employee who will perform OSHA Class I, Class II, Class III, or Class IV asbestos abatement operations. Such documentation shall be submitted on a Contractor generated form titled "Certificate of Workers Acknowledgment", to be completed for each employee in the same format and containing the same information as the example certificate at the end of this section. Training course completion certificates (initial and most recent update refresher) required by the information checked on the form shall be attached.

f. Physician: Resume of the physician who will or has performed the medical examinations and evaluations of the persons who will conduct the asbestos abatement work tasks. The physician shall be currently licensed by the state where the workers will be or have been examined, have expertise in pneumoconiosis and shall be responsible for the determination of medical surveillance protocols and for review of examination/test results performed in compliance with 29 CFR 1926.1101. The physician shall be familiar with the site's hazards and the scope of this project.

g. Independent Testing Laboratory: identify the independent testing laboratory selected to perform the sample analyses and report the results. The testing laboratory shall be completely independent from the Contractor as recognized by federal, state or local regulations. Written verification of the following criteria, signed by the testing laboratory principal and the Contractor, shall be submitted:

(1) Phase contrast microscopy (PCM): The laboratory is fully equipped and proficient in conducting PCM of airborne samples using the methods specified by 29 CFR 1926.1101, OSHA method ID-160, the most current version of NIOSH NMAM Method 7400 as shown in Table 3 at the end of this Section. The laboratory shall be currently judged proficient (classified as acceptable) in counting airborne asbestos samples by PCM by successful participation in each of the last 4 rounds in the American Industrial Hygiene Association (AIHA) Proficiency Analytical Testing (PAT) Program or by participating in the AIHA PAT Program, and being judged proficient in counting samples.

(2) Polarized light microscopy (PLM): The laboratory is fully equipped and proficient in conducting PLM analyses of suspect ACM bulk samples in accordance with 40 CFR 763, Subpart E, Appendix E; the laboratory is currently accredited by NIST under the NVLAP for bulk asbestos analysis and will use analysts with demonstrated proficiency to conduct PLM analyses.

(3) Transmission electron microscopy (TEM): The laboratory is fully

equipped and proficient in conducting TEM analysis of airborne samples using the mandatory method specified by 40 CFR 763, Subpart E, Appendix E; the laboratory is currently accredited by NIST under the NVLAP for airborne sample analysis of asbestos by TEM; the laboratory will use analysts with demonstrated proficiency under NVLAP. It is proficient in conducting analysis for low asbestos concentration, enhanced analysis of floor tiles and bulk materials where multiple layers are present, using an improved EPA test method titled, "Method for the Determination of Asbestos in Bulk Building Materials".

(4) PCM/TEM: The laboratory is fully equipped and each analyst is proficient in conducting PCM and TEM analysis of airborne samples using NIOSH NMAM Method 7400 PCM and NIOSH NMAM Method 7402 (TEM confirmation of asbestos content of PCM results) from the same filter.

h. Disposal Facility, Transporter: Written evidence that the landfill to be used is approved for asbestos disposal by the state and local regulatory agencies. Copies of signed agreements between the Contractor (including subcontractors and transporters) and the asbestos waste disposal facility to accept and dispose of all asbestos containing waste shall be provided. The Contractor and transporters shall meet the DOT requirements of 49 CFR 171, 49 CFR 172, and 49 CFR 173 as well as registration requirements of 49 CFR 107 and other applicable state or local requirements. The disposal facility shall meet the requirements of 40 CFR 61, Sections .154 or .155, as required in 40 CFR 61 150(b), and other applicable state or local requirements.

3.12 CONTROL AND MANAGEMENT OF LEAD-BASED PAINT (LBP)

Prior to any renovation and/or construction activities the Contractor shall perform the following:

a. The Contractor shall conduct a Lead Based Paint Survey.

b. Lead Hazard Control. If construction activities include impact to lead containing materials, the design shall require the submission of a Lead Compliance Plan. The plan shall be job-specific that includes work procedures to be used in the disturbance of lead containing materials in accordance with 29 CFR 1926.62 and all applicable state regulations. The plan shall be submitted for Government review and approval prior to the commencement of any activities that impact lead containing materials. Whole building demolition techniques shall be used for the demolition of facilities. The design shall require the removal of lead from any portion of the existing facilities that have the potential for exposing workers or the environment to lead during the performance of construction activities.

c. Lead Waste Management. The design shall require all waste that has the potential to contain lead be transported and disposed in accordance with all applicable federal, state, and local waste regulations. Disclosure shall be made to the receiving landfill that the demolished building materials may contain lead. The design shall require a draft copy of the waste manifest be provided to the Government for approval at least (5) five working days prior to transport and disposal. The Contractor shall ensure

that all waste manifests are signed by an authorized VA signatory. The Contractor shall coordinate with the VA to ensure that an authorized representative is available to sign on the date and time that pick-up by a permitted waste transporter is scheduled.

d. Phasing. The facilities included in this SOW may be occupied during the LBP abatement. The Contractor shall determine the need for phasing of the LBP removal. If phasing is needed, the Contractor shall coordinate with the Government on phasing of the LBP removal so portions of the facility may be vacated as required to meet Federal regulations concerning prevention of lead exposure.

e. Test Reports. The Contractor shall submit the results of all lead samples

3.13 CONTROL AND MANAGEMENT OF POLYCHLORINATED BIPHENYLS (PCBS)

Manage and dispose of PCB-contaminated waste in accordance with 40 CFR 761.

3.14 CONTROL AND MANAGEMENT OF LIGHTING BALLAST AND LAMPS CONTAINING PCBS

Manage and dispose of contaminated waste in accordance with 40 CFR 761.

3.15 MILITARY MUNITIONS

In the event military munitions, as defined in 40 CFR 260, are discovered or uncovered, immediately stop work in that area and immediately inform the Contracting Officer.

3.16 PETROLEUM, OIL, LUBRICANT (POL) STORAGE AND FUELING

POL products include flammable or combustible liquids, such as gasoline, diesel, lubricating oil, used engine oil, hydraulic oil, mineral oil, and cooking oil. Store POL products and fuel equipment and motor vehicles in a manner that affords the maximum protection against spills into the environment. Manage and store POL products in accordance with EPA 40 CFR 112, and other federal, state, regional, and local laws and regulations. Use secondary containments, dikes, curbs, and other barriers, to prevent POL products from spilling and entering the ground, storm or sewer drains, stormwater ditches or canals, or navigable waters of the United States. Describe in the EPP (see paragraph ENVIRONMENTAL PROTECTION PLAN) how POL tanks and containers must be stored, managed, and inspected and what protections must be provided. Storage of fuel on the project site must be in accordance with EPA, state, and local laws and regulations and paragraph OIL STORAGE INCLUDING FUEL TANKS.

3.16.1 Used Oil Management

Manage used oil generated on site in accordance with 40 CFR 279. Determine if any used oil generated while onsite exhibits a characteristic of hazardous waste. Used oil containing 1,000 parts per million of solvents is considered a hazardous waste and disposed of at the Contractor's expense. Used oil mixed with a hazardous waste is also considered a hazardous waste. Dispose in accordance with paragraph HAZARDOUS WASTE DISPOSAL.

3.16.2 Oil Storage Including Fuel Tanks

Provide secondary containment and overfill protection for oil storage tanks. A berm used to provide secondary containment must be of sufficient size and strength to contain the contents of the tanks plus 5 inches freeboard for precipitation. Construct the berm to be impervious to oil for 72 hours that no discharge will permeate, drain, infiltrate, or otherwise escape before cleanup occurs. Use drip pans during oil transfer operations; adequate absorbent material must be onsite to clean up any spills and prevent releases to the environment. Cover tanks and drip pans during inclement weather. Provide procedures and equipment to prevent overfilling of tanks. If tanks and containers with an aggregate aboveground capacity greater than 1320 gallons will be used onsite (only containers with a capacity of 55 gallons or greater are counted), provide and implement a SPCC plan meeting the requirements of 40 CFR 112. Do not bring underground storage tanks to the VA for Contractor use during a project. Submit the SPCC plan to the Contracting Officer for approval.

Monitor and remove any rainwater that accumulates in open containment dikes or berms. Inspect the accumulated rainwater prior to draining from a containment dike to the environment, to determine there is no oil sheen present.

3.17 INADVERTENT DISCOVERY OF PETROLEUM-CONTAMINATED SOIL OR HAZARDOUS WASTES

If petroleum-contaminated soil, or suspected hazardous waste is found during construction that was not identified in the Contract documents, immediately notify the Contracting Officer. Do not disturb this material until authorized by the Contracting Officer.

3.18 SOUND INTRUSION

Make the maximum use of low-noise emission products, as certified by the EPA. Blasting or use of explosives are not permitted without written permission from the Contracting Officer, and then only during the designated times. Confine pile-driving operations to the period between 8 a.m. and 4 p.m., Monday through Friday, exclusive of holidays, unless otherwise specified.

Keep construction activities under surveillance and control to minimize environment damage by noise. Comply with the provisions of the State of New Mexico rules.

3.19 POST CONSTRUCTION CLEANUP

Clean up areas used for construction in accordance with Contract Clause: "Cleaning Up". Unless otherwise instructed in writing by the Contracting Officer, remove traces of temporary construction facilities such as haul roads, work area, structures, foundations of temporary structures, stockpiles of excess or waste materials, and other vestiges of construction prior to final acceptance of the work. Grade parking area and similar temporarily used areas to conform with surrounding contours.

SECTION 01 58 00

PROJECT IDENTIFICATION
08/19, CHG 5: 08/22

PART 1 GENERAL

1.1 REFERENCES

The publications listed below form a part of this specification to the extent referenced. The publications are referred to within the text by the basic designation only.

U.S. ARMY CORPS OF ENGINEERS (USACE)

EP 310-1-6a	(2006; 2019 Change 2) Project Operation -- Sign Standards Manual, VOL 1
EP 310-1-6b	(2006) Sign Standards Manual, VOL 2, Appendices

1.2 SUBMITTALS

Government approval is required for submittals with a "G" or "S" classification. Submittals not having a "G" or "S" classification are for information only. When used, a code following the "G" classification identifies the office that will review the submittal for the Government. Submit the following in accordance with Section 01 33 00 SUBMITTAL PROCEDURES:

SD-02 Shop Drawings

Preliminary One Line Drawings Of Project Rendering; G

Sign Legend Orders; G

SD-04 Samples

Final Rendering Sample; G

Final Framed Rendering and Copies; G

1.3 QUALITY CONTROL

1.3.1 Rendering

Provide the project rendering in accordance with the following drawing stages as required in the SUBMITTALS paragraph. The following submittal data is required to properly identify the appropriate view and approve the final rendering of the facility. The final painted rendering will be used to produce the image for the signboard and framed photographic copies provided to the Contracting Officer.

1.3.1.1 Preliminary One Line Drawings

Provide three different views of the facility in a preliminary single line drawing (black and white) format. These three views will represent the best angles at which to view the proposed facility showing the best design

features and the three dimensional character of the facility.

1.3.1.2 Final Rendering Sample

Provide a photographic copy (8 by 10 inches minimum size) of final rendering for approval of color, landscaping, and foreground/background development prior to final submittal.

1.3.1.3 Final Framed Rendering and Copies

Provide final full color rendering of the proposed facility as specified.

1.4 PROJECT IDENTIFICATION SIGN

1.4.1 Construction Project Signs

Furnish the construction project sign package, maintain the signs during construction, and remove the signs from the job site upon completion of the project. The construction project sign package consists of two signs: one for project identification and the other to show the on-the-job safety performance of the contractor. Ensure that the package conforms to the requirements of EP 310-1-6a and EP 310-1-6b, specifically Section 16. Submit the sign legend orders as described in Section 16 of EP 310-1-6a before erecting the signs.

Utilize the Example Graphic of Signage with Dimensions for MILCON Project and follow USACE policy provided in Engineering Pamphlet (EP) 310-1-6a, Sign Standards Manual, VOL 1 for guidelines on fabricating, locating, and mounting construction project signs (https://www.publications.usace.army.mil/Portals/76/Users/182/86/2486/EP_310-1-6a%20change%202.pdf).

SECTION 01 74 19

CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL

PART 1 GENERAL

1.1 REFERENCES

The publications listed below form a part of this specification to the extent referenced. The publications are referred to within the text by the basic designation only.

U.S. NATIONAL ARCHIVES AND RECORDS ADMINISTRATION (NARA)

40 CFR 273	Standards for Universal Waste Management
49 CFR 173	Shippers - General Requirements for Shipments and Packagings
49 CFR 178	Specifications for Packagings

1.2 DEFINITIONS

1.2.1 Co-mingle

The practice of placing unrelated materials together in a single container, usually for benefits of convenience and speed.

1.2.2 Construction Waste

Waste generated by construction activities, such as scrap materials, damaged or spoiled materials, temporary and expendable construction materials, and other waste generated by the workforce during construction activities.

1.2.3 Demolition Debris/Waste

Waste generated from demolition activities, including minor incidental demolition waste materials generated as a result of Intentional dismantling of all or portions of a building, to include clearing of building contents that have been destroyed or damaged.

1.2.4 Disposal

Depositing waste in a solid waste disposal facility, usually a managed landfill or incinerator, regulated in the US under the Resource Conservation and Recovery Act (RCRA).

1.2.5 Diversion

The practice of diverting waste from disposal in a landfill or incinerator, by means of eliminating or minimizing waste, or reuse of materials.

1.2.6 Final Construction Waste Diversion Report

A written assertion by a material recovery facility operator identifying constituent materials diverted from disposal, usually including summary tabulations of materials, weight in short-ton.

1.2.7 Recycling

The series of activities, including collection, separation, and processing, by which products or other materials are diverted from the solid waste stream for use in the form of raw materials in the manufacture of new products sold or distributed in commerce, or the reuse of such materials as substitutes for goods made of virgin materials, other than fuel.

1.2.8 Reuse

The use of a product or materials again for the same purpose, in its original form or with little enhancement or change.

1.2.9 Salvage

Usable, salable items derived from buildings undergoing demolition or deconstruction, parts from vehicles, machinery, other equipment, or other components.

1.2.10 Source Separation

The practice of administering and implementing a management strategy to identify and segregate unrelated waste at the first opportunity.

1.3 CONSTRUCTION WASTE (INCLUDES DEMOLITION DEBRIS/WASTE)

Divert a minimum of 60 percent by weight of the project construction waste and demolition debris/waste from the landfill or incinerator. Follow applicable industry standards in the management of waste. Apply sound environmental principles in the management of waste. (1) Practice efficient waste management when sizing, cutting, and installing products and materials and (2) use all reasonable means to divert construction waste and demolition debris/waste from landfills and incinerators and to facilitate the recycling or reuse of excess construction materials.

1.4 CONSTRUCTION WASTE MANAGEMENT

Implement a Construction Waste Management Program for the project. Take a pro-active, responsible role in the management of construction waste, recycling process, disposal of demolition debris/waste, and require all subcontractors, vendors, and suppliers to participate in the Construction Waste Management Program. Establish a process for clear tracking, and documentation of construction waste and demolition debris/waste.

1.4.1 Implementation of Construction Waste Management Program

Develop and document how the Construction Waste Management Program will be implemented in a Construction Waste Management Plan. Submit a Construction Waste Management Plan to the Contracting Officer for approval. Construction waste and demolition debris/waste materials include un-used construction materials not incorporated in the final work, as well as demolition debris/waste materials from demolition activities or

deconstruction activities. In the management of waste, consider the availability of viable markets, the condition of materials, the ability to provide material in suitable condition and in a quantity acceptable to available markets, and time constraints imposed by internal project completion mandates.

1.4.2 Oversight

The Environmental Manager, as specified in Section 01 57 19 TEMPORARY ENVIRONMENTAL CONTROLS, is responsible for overseeing and documenting results from executing the Construction Waste Management Plan for the project.

1.4.3 Special Programs

Implement special programs involving rebates or similar incentives related to recycling of construction waste and demolition debris/waste materials. Retain revenue or savings from salvaged or recycling, unless otherwise directed. Ensure firms and facilities used for recycling, reuse, and disposal are permitted for the intended use to the extent required by federal, state, and local regulations.

1.4.4 Special Instructions

Provide on-site instruction of appropriate separation, handling, recycling, salvage, reuse, and return methods to be used by all parties at the appropriate stages of the projects. Designation of single source separating or commingling will be clearly marked on the containers.

1.4.5 Waste Streams

Delineate waste streams and characterization, including estimated material types and quantities of waste, in the Construction Waste Management Plan. Manage all waste streams associated with the project. Typical waste streams are listed below. Include additional waste steams not listed:

a. Land Clearing Debris

b. Asphalt

c. Masonry and CMU

d. Concrete

e. Metals (Includes, but is not limited to, banding, stud trim, ductwork, piping, rebar, roofing, other trim, steel, iron, galvanized, stainless steel, aluminum, copper, zinc, bronze.)

f. Wood (nails and staples allowed)

g. Glass

h. Paper

i. Plastics (PET, HDPE,PVC,LDPE,PP,PS, Other)

j. Gypsum

k. Non-hazardous paint and paint cans

l. Carpet

m. Ceiling Tiles

o. Beverage Containers

1.5 SUBMITTALS

Government approval is required for submittals with a "G" or "S" classification. Submittals not having a "G" or "S" classification are for information only. When used, a code following the "G" classification identifies the office that will review the submittal for the Government. Submit the following in accordance with Section 01 33 00 SUBMITTAL PROCEDURES:

SD-01 Preconstruction Submittals

Construction Waste Management Plan; G, ECGE

SD-06 Test Reports

Quarterly Reports

Annual Report

SD-11 Closeout Submittals

Final Construction Waste Diversion Report; S

1.6 MEETINGS

Conduct Construction Waste Management meetings. After award of the Contract and prior to commencement of work, schedule and conduct a meeting with the Contracting Officer to discuss the proposed Construction Waste Management Plan and to develop a mutual understanding relative to the management of the Construction Waste Management Program and how waste diversion requirements will be met.

At a minimum, discuss and document waste management goals at following meetings:

a. Preconstruction meeting.

b. Regular site meetings.

c. Work safety meeting (if applicable).

1.7 CONSTRUCTION WASTE MANAGEMENT PLAN

Submit Construction Waste Management Plan within 15 calendar days after notice to proceed. Revise and resubmit Construction Waste Management Plan as necessary, in order for construction to begin. Submit Construction Waste Management Plan not less than 60 calendar days before scheduled final site or building design approval. Revise and resubmit Construction Waste Management Plan until it receives final approval from the Contracting Officer, in order for construction to begin. Execute

demolition or deconstruction activities in accordance with Section 02 41 00 DEMOLITION. Manage demolition debris/waste or deconstruction materials in accordance with the approved construction waste management plan.

An approved Construction Waste Management Plan will not relieve the Contractor of responsibility for compliance with applicable environmental regulations or meeting project cumulative waste diversion requirement. Ensure all subcontractors receive a copy of the approved Construction Waste Management Plan. The plan demonstrates how to meet the project waste diversion requirement. Also, include the following in the plan:

a. Identify the names of individuals responsible for waste management and waste management tracking, along with roles and responsibilities on the project.

b. Actions that will be taken to reduce solid waste generation, including coordination with subcontractors to ensure awareness and participation.

c. Description of the regular meetings to be held to address waste management.

d. Description of the specific approaches to be used in recycling/reuse of the various materials generated, including the areas on site and equipment to be used for processing, sorting, and temporary storage of materials.

e. Name of landfill and incinerator to be used.

f. Identification of local and regional re-use programs, including non-profit organizations such as schools, local housing agencies, and organization that accept used materials such as material exchange networks and resale stores. Include the name, location, phone number for each re-use facility identified, and provide a copy of the permit or license for each facility.

g. List of specific materials, by type and quantity, that will be salvaged for resale, salvaged and reused on the current project, salvaged and stored for reuse on a future project, or recycled. Identify the recycling facilities by name, address, and phone number.

h. Identification of materials that cannot be recycled or reused with an explanation or justification, to be approved by the Contracting Officer.

i. Description of the means by which materials identified in item (g) above will be protected from contamination.

j. Description of the means of transportation of the recyclable materials (whether materials will be site-separated and self-hauled to designated centers, or whether mixed materials will be collected by a waste hauler and removed from the site).

k. Copy of training plan for subcontractors and other services to prevent contamination by co-mingling materials identified for diversion and waste materials.

l. Identification of at least 5 construction or demolition material streams for diversion.

m. Detailed plan and distribution of waste diversion between buildings, when project is a part of a campus.

n. Facilities or subcontractors offering construction waste transport on-site or off-site must ensure that proper shipping orders, bill of lading, manifests, or other shipping documents containing waste diversion information meet requirements of 40 CFR 273 Universal Waste Management, 49 CFR 173 Shippers - General Requirements for Shipments and Packagings, and 49 CFR 178 Specifications for Packaging. Individuals signing manifests or other shipping documents should meet the minimum training requirements.

o. List each supplier who deliver construction materials, in bulk, or package products in returnable containers or returnable packaging, or have take-back programs. List each program and the applicable material to actively monitor and track to assist in meeting waste diversion requirements on the project.

p. Identify local jurisdiction requirements for waste management. Include local requirements and points of contact.

Distribute copies of the waste management plan to each subcontractor, Quality Control Manager Environmental Manager, and the Contracting Officer.

1.8 RECORDS (DOCUMENTATION)

1.8.1 General

Maintain records to document the types and quantities of waste generated and diverted though re-use, recycling and sale to third parties; through disposal to a landfill or incinerator facility. Provide explanations for materials not recycled, reused or sold. Collect and retain manifests, weight tickets, sales receipts, and invoices specifically identifying diverted project waste materials or disposed materials.

1.8.2 Accumulated

Maintain a running record of materials generated and diverted from landfill disposal, including accumulated diversion rates for the project. Make records available to the Contracting Officer during construction or incidental demolition activities. Provide a copy of the diversion records to the Contracting Officer upon completion of the construction, incidental demolitions or minor deconstruction activities.

1.9 REPORTS

1.9.1 General

Maintain current construction waste diversion information on site for periodic inspection by the Contracting Officer. Include in the quarterly reports, annual reports and final reports: the project name, contract information, information for waste generated, diverted and disposed of for the current reporting period and show cumulative totals for the project. Reports must identify quantifies of waste by type and disposal method. Also include in each report, supporting documentation to include manifests, weigh tickets, receipts, and invoices specifically identifying the project and waste material type and weighted sum.

1.9.2 Quarterly Reporting

Provide cumulative reports at the end of each quarter (December, March, June, and September, corresponding with the federal fiscal year for reporting purposes). Submit quarterly reports not later than 15 calendar days after the preceding quarter has ended.

1.9.3 Annual Reporting

Provide a cumulative construction waste diversion report annually. Submit annual report not later than 30 calendar days after the preceding fourth quarter has ended.

1.10 FINAL CONSTRUCTION WASTE DIVERSION REPORT

A Final Construction Waste Diversion Report is required at the end of the project. Provide Final Construction Waste Diversion Report 60 days prior to the Beneficial Occupancy Date (BOD).

1.11 COLLECTION

Collect, store, protect, and handle reusable and recyclable materials at the site in a manner which prevents contamination, and provides protection from the elements to preserve their usefulness and monetary value. Provide receptacles and storage areas designated specifically for recyclable and reusable materials and label them clearly and appropriately to prevent contamination from other waste materials. Keep receptacles or storage areas neat and clean.

Train subcontractors and other service providers to either separate waste streams or use the co-mingling method as described in the Construction Waste Management Plan. Handle hazardous waste and hazardous materials in accordance with applicable regulations and coordinate with Section 01 57 19 TEMPORARY ENVIRONMENTAL CONTROLS. Separate materials by one of the following methods described herein:

1.11.1 Source Separation Method

Separate waste products and materials that are recyclable from trash and sort as described below into appropriately marked separate containers and then transport to the respective recycling facility for further processing. Deliver materials in accordance with recycling or reuse facility requirements (e.g., free of dirt, adhesives, solvents, petroleum contamination, and other substances deleterious to the recycling process). Separate materials into the category types as defined in the Construction Waste Management Plan.

1.11.2 Other Methods

Other methods proposed by the Contractor may be used when approved by the Contracting Officer.

1.12 DISPOSAL

Control accumulation of waste materials and trash. Recycle or dispose of collected materials off-site at intervals approved by the Contracting Officer and in compliance with waste management procedures as described in the waste management plan. Except as otherwise specified in other sections of the specifications, dispose of in accordance with the

following:

1.12.1 Reuse

Give first consideration to reusing construction and demolition materials as a disposition strategy. Recover for reuse materials, products, and components as described in the approved Construction Waste Management Plan. Coordinate with the Contracting Officer to identify onsite reuse opportunities or material sales or donation available through Government resale or donation programs. Sale of recovered materials is not allowed on the VA project site. Consider the use of surplus industrial supply broker services, who match entities with reusable or repurpose industrial materials with entities with need of such materials.

1.12.2 Recycle

Recycle non-hazardous construction and demolition/debris materials that are not suitable for reuse. Track rejection of contaminated recyclable materials by the recycling facility. Rejected recyclables materials will not be counted as a percentage of diversion calculation. Recycle all fluorescent lamps, HID lamps, mercury (Hg) -containing thermostats and ampoules, and PCBs-containing ballasts and electrical components as directed by the Contracting Officer. Do not crush lamps on site as this creates a hazardous waste stream with additional handling requirements.

1.12.3 Waste

Dispose by landfill or incineration only those waste materials with no practical use, economic benefit, or recycling opportunity.

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

Not used.

-- End of Section --

SECTION 01 78 00

CLOSEOUT SUBMITTALS
05/19, CHG 1: 08/21

PART 1 GENERAL

1.1 REFERENCES

The publications listed below form a part of this specification to the extent referenced. The publications are referred to within the text by the basic designation only.

U.S. ARMY CORPS OF ENGINEERS (USACE)

EM 1110-1-2909	(2012) Engineering and Design -- Geospatial Data and Systems
ERDC/ITL TR-19-6	(2019) A/E/C Graphics Standard, Release 2.1
ERDC/ITL TR-19-7	(2019) A/E/C CAD Standard - Release 6.1

1.2 DEFINITIONS

1.2.1 As-Built Drawings

As-built drawings are the marked-up drawings, maintained by the Contractor on-site, that depict actual conditions and deviations from the Contract Documents. These deviations and additions may result from coordination required by, but not limited to: contract modifications; official responses to submitted Requests for Information (RFI's); direction from the Contracting Officer; design that is the responsibility of the Contractor, and differing site conditions. Maintain the as-builts throughout construction as red-lined hard copies on site and red-lined PDF files. These files serve as the basis for the creation of the record drawings.

1.2.2 Record Drawings

The record drawings are the final compilation of actual conditions reflected in the as-built drawings.

1.2.3 Record Model

A model reflecting approved changes during construction including red-lines, requests for information (RFI's), and contract modifications. Include updated construction phase facility/site data for components.

1.2.4 Advanced Modeling

A subset of geospatial technologies as defined in EM 1110-1-2909 to include Building Information Modeling (BIM), Civil Information Modeling (CIM), Geographic Information Systems (GIS), and Computer-Aided Design (CAD). Advanced modeling is comprised of models and drawings that form a digital representation of the project, or part thereof, that are comprised of model elements with facility data.

1.2.5 USACE CAD/BIM Technology Center

The USACE CAD/BIM Technology Center hosts all standard content for USACE. This content can be accessed through the CAD/BIM Technology Center website, https://cadbimcenter.erdc.dren.mil/.

1.3 SOURCE DRAWING FILES

Request the full set of electronic drawings, in the source format, for Record Drawing preparation, after award and at least 30 days prior to required use.

1.3.1 Terms and Conditions

Data contained on these electronic files must not be used for any purpose other than as a convenience in the preparation of construction drawings and data for the referenced project. Any other use or reuse is at the sole risk of the Contractor and without liability or legal exposure to the Government. The Contractor must make no claim and waives to the fullest extent permitted by law, any claim or cause of action of any nature against the Government, its agents or sub consultants that may arise out of or in connection with the use of these electronic files. The Contractor must, to the fullest extent permitted by law, indemnify and hold the Government harmless against all damages, liabilities or costs, including reasonable attorney's fees and defense costs, arising out of or resulting from the use of these electronic files.

These electronic CAD drawing files are not construction documents. Differences may exist between the CAD files and the corresponding construction documents. The Government makes no representation regarding the accuracy or completeness of the electronic CAD files, nor does it make representation to the compatibility of these files with the Contractor hardware or software. In the event that a conflict arises between the signed and sealed construction documents prepared by the Government and the furnished Source drawing files, the signed and sealed construction documents govern. The Contractor is responsible for determining if any conflict exists. Use of these Source Drawing files does not relieve the Contractor of duty to fully comply with the contract documents, including and without limitation, the need to check, confirm and coordinate the work of all contractors for the project. If the Contractor uses, duplicates or modifies these electronic source drawing files for use in producing construction drawings and data related to this contract, remove all previous indicia of ownership (seals, logos, signatures, initials and dates).

1.4 RECORD DRAWINGS

The Government will provide pdf and or program files at the preconstruction conference that contains one set of "as-designed" electronic CAD files in the specified software and format revised to reflect all amendments and the final contract PDF drawings. The CAD files are provided to enable preparation of as-built or as-constructed drawings. If discrepancies exist between the CAD files and the contract PDF drawings, correct the CAD files to show the contract PDF drawings.

1.4.1 Variation with Contract Drawings

The electronic files provided are not part of the contract documents. If there is any discrepancy between the electronic files and the contract

drawings, the contract drawings govern. The Government has no responsibility to modify any GFM due to changes in the design that occur after award.

Evaluate the content and quality of the GFM upon receipt. If major discrepancies or omissions occur in the GFM, notify the Contracting Officer and indicate the nature of such variations.

1.4.2 Data Loss, Corruption, and Error

Transfer of GFM files may result in corrupted files resulting in data loss and errors. Use of GFM files at own risk. Verify data integrity upon receipt and request a replacement if necessary. Make any adjustment in file structure, format, or software version as needed to make GFM compatible with computer systems and/or software to meet the requirements of the contract.

1.4.3 Modeling Completeness and Quality

The Government makes no guarantee that the GFM provide the level of completeness or quality as required by the contract. Further, the Government makes no guarantee that identified variations will be corrected upon notification.

1.5 SUBMITTALS

Government approval is required for submittals with a "G" or "S" classification. Submittals not having a "G" or "S" classification are for information only. When used, a code following the "G" classification identifies the office that will review the submittal for the Government. Submit the following in accordance with Section 01 33 00 SUBMITTAL PROCEDURES:

SD-03 Product Data

Warranty Management Plan

Warranty Tags

Spare Parts Data

SD-08 Manufacturer's Instructions

Posted Instructions

SD-10 Operation and Maintenance Data

Operation and Maintenance Manuals; G

SD-11 Closeout Submittals

As-Built Drawings; G

Record Drawings; G

Record Model; G

As-Built Record of Equipment and Materials

Final Approved Shop Drawings; G

Construction Contract Specifications; G

Certification of EPA Designated Items; G

Certification Of USDA Designated Items; G

High Performance and Sustainable Building (HPSB) Checklist; G

1.6 SPARE PARTS DATA

Submit two copies of the Spare Parts Data list.

a. Indicate manufacturer's name, part number, and stock level required for test and balance, pre-commissioning, maintenance and repair activities. List those items that may be standard to the normal maintenance of the system.

b. At acceptance of commissioning, ensure the required stock level is supplied as indicated in subparagraph a for maintenance and repair activities through the facilities warranty period. Provision of spare parts does not relieve the Contractor of responsibilities listed under the contract guarantee provisions.

1.7 QUALITY CONTROL

Additions and corrections to the contract drawings must be equal in quality and detail to that of the originals. Line colors, line weights, lettering, layering conventions, and symbols must be the same as the original line colors, line weights, lettering, layering conventions, and symbols.

1.8 WARRANTY MANAGEMENT

1.8.1 Warranty Management Plan

Develop a warranty management plan which contains information relevant to FAR 52.246-21 Warranty of Construction. At least 30 days before the planned pre-warranty conference, submit one set of the warranty management plan. Include within the warranty management plan all required actions and documents to assure that the Government receives all warranties to which it is entitled. The plan narrative must contain sufficient detail to render it suitable for use by future maintenance and repair personnel, whether tradesmen, or of engineering background, not necessarily familiar with this contract. The term "status" as indicated below must include due date and whether item has been submitted or was accomplished. Submit warranty information, made available during the construction phase, to the Contracting Officer for approval prior to each monthly pay estimate. Assemble approved information in a binder and turn over to the Government upon acceptance of the work. The construction warranty period must begin on the date of project acceptance and continue for the full product warranty period. Conduct a joint 4 month and 9 month warranty inspection, measured from time of acceptance; with the Contractor, Contracting Officer and the Customer Representative. The warranty management plan must include, but is not limited to, the following:

a. Roles and responsibilities of personnel associated with the warranty process, including points of contact and telephone numbers within the

organizations of the Contractors, subcontractors, manufacturers or suppliers involved.

b. For each warranty, the name, address, telephone number, and e-mail of each of the guarantor's representatives nearest to the project location.

c. A list and status of delivery of Certificates of Warranty for extended warranty items, including roofs, HVAC balancing, pumps, motors, transformers, and for commissioned systems, such as fire protection and alarm systems, sprinkler systems, and lightning protection systems.

d. As-Built Record of Equipment and Materials list for each warranted equipment, item, feature of construction or system indicating:

(1) Name of item.
(2) Model and serial numbers.
(3) Location where installed.
(4) Name and phone numbers of manufacturers or suppliers.
(5) Names, addresses and telephone numbers of sources of spare parts.
(6) Warranties and terms of warranty. Include one-year overall warranty of construction, including the starting date of warranty of construction. Items which have warranties longer than one year must be indicated with separate warranty expiration dates.
(7) Cross-reference to warranty certificates as applicable.
(8) Starting point and duration of warranty period.
(9) Summary of maintenance procedures required to continue the warranty in force.
(10) Cross-reference to specific pertinent Operation and Maintenance manuals.
(11) Organization, names and phone numbers of persons to call for warranty service.
(12) Typical response time and repair time expected for various warranted equipment.

e. The plans for attendance at the 4 and 9 month post-construction warranty inspections conducted by the Government.

f. Procedure and status of tagging of equipment covered by warranties longer than one year.

g. Copies of instructions to be posted near selected pieces of equipment where operation is critical for warranty or safety reasons.

1.8.2 Performance Bond

The Performance Bond must remain effective throughout the construction and warranty period.

a. In the event the Contractor fails to commence and diligently pursue any construction warranty work required, the Contracting Officer will have the work performed by others, and after completion of the work, will charge the remaining construction warranty funds of expenses incurred by the Government while performing the work, including, but not limited to administrative expenses.

b. In the event sufficient funds are not available to cover the construction warranty work performed by the Government at the Contractor's expense, the Contracting Officer will have the right to

recoup expenses from the bonding company.

c. Following oral or written notification of required construction warranty repair work, respond in a timely manner. Written verification will follow oral instructions. Failure to respond will be cause for the Contracting Officer to proceed against the Contractor.

1.8.3 Pre-Warranty Conference

Prior to contract completion, and at a time designated by the Contracting Officer, meet with the Contracting Officer to develop a mutual understanding with respect to the requirements of this section. At this meeting, establish and review communication procedures for Contractor notification of construction warranty defects, priorities with respect to the type of defect, reasonable time required for Contractor response, and other details deemed necessary by the Contracting Officer for the execution of the construction warranty In connection with these requirements and at the time of the Contractor's quality control completion inspection, furnish the name, telephone number and address of a licensed and bonded company which is authorized to initiate and pursue construction warranty work action on behalf of the Contractor. This point of contact must be located within the local service area of the warranted construction, be continuously available, and be responsive to Government inquiry on warranty work action and status. This requirement does not relieve the Contractor of any of its responsibilities in connection with other portions of this provision.

1.8.4 Contractor's Response to Construction Warranty Service Requirements

Following oral or written notification by the Contracting Officer, respond to construction warranty service requirements in accordance with the "Construction Warranty Service Priority List" and the three categories of priorities listed below. Submit a report on any warranty item that has been repaired during the warranty period. Include within the report the cause of the problem, date reported, corrective action taken, and when the repair was completed. If the Contractor does not perform the construction warranty within the timeframe specified, the Government will perform the work and back charge the construction warranty payment item established.

a. First Priority Code 1. Perform onsite inspection to evaluate situation, and determine course of action within 4 hours, initiate work within 6 hours and work continuously to completion or relief.

b. Second Priority Code 2. Perform onsite inspection to evaluate situation, and determine course of action within 8 hours, initiate work within 24 hours and work continuously to completion or relief.

c. Third Priority Code 3. All other work to be initiated within 3 work days and work continuously to completion or relief.

d. The "Construction Warranty Service Priority List" is as follows:

Code 1-Life Safety Systems
(1) Fire suppression systems.
(2) Fire alarm system(s) in place in the building.

Code 1-Air Conditioning Systems
(1) Recreational support.
(2) Air conditioning leak in part of building, if causing damage.

(3) Air conditioning system not cooling properly.

Code 1-Doors
(1) Overhead doors not operational, causing a security, fire, or safety problem.
(2) Interior, exterior personnel doors or hardware, not functioning properly, causing a security, fire, or safety problem.

Code 3-Doors
(1) Overhead doors not operational.
(2) Interior/exterior personnel doors or hardware not functioning properly.

Code 1-Electrical
(1) Power failure (entire area or any building operational after 1600 hours).
(2) Security lights
(3) Smoke detectors

Code 2-Electrical
(1) Power failure (no power to a room or part of building).
(2) Receptacle and lights (in a room or part of building).

Code 3-Electrical
Street lights.

Code 1-Gas
(1) Leaks and breaks.
(2) No gas to family housing unit or cantonment area.

Code 1-Heat
(1) Area power failure affecting heat.
(2) Heater in unit not working.

Code 2-Kitchen Equipment
(1) Dishwasher not operating properly.
(2) All other equipment hampering preparation of a meal.

Code 1-Plumbing
(1) Hot water heater failure.
(2) Leaking water supply pipes.

Code 2-Plumbing
(1) Flush valves not operating properly.
(2) Fixture drain, supply line to commode, or any water pipe leaking.
(3) Commode leaking at base.

Code 3 -Plumbing
Leaky faucets.

Code 3-Interior
(1) Floors damaged.
(2) Paint chipping or peeling.
(3) Casework.

Code 1-Roof Leaks
Temporary repairs will be made where major damage to property is occurring.

Code 2-Roof Leaks
Where major damage to property is not occurring, check for location of leak during rain and complete repairs on a Code 2 basis.

Code 2-Water (Exterior)
No water to facility.

Code 2-Water (Hot)
No hot water in portion of building listed.

Code 3-All other work not listed above.

1.8.5 Warranty Tags

At the time of installation, tag each warranted item with a durable, oil and water resistant tag approved by the Contracting Officer. Attach each tag with a copper wire and spray with a silicone waterproof coating. Also, submit two record copies of the warranty tags showing the layout and design. The date of acceptance and the QC signature must remain blank until the project is accepted for beneficial occupancy. Show the following information on the tag.

Type of product/material	
Model number	
Serial number	
Contract number	
Warranty period from/to	
Inspector's signature	
Construction Contractor	
Address	
Telephone number	
Warranty contact	
Address	
Telephone number	
Warranty response time priority code	

WARNING - PROJECT PERSONNEL TO PERFORM ONLY OPERATIONAL MAINTENANCE DURING THE WARRANTY PERIOD.

PART 2 PRODUCTS

2.1 RECORD DRAWINGS

Prepare the CAD drawing files in MicroStation V8 format compatible with a Windows 10 operating system.

2.1.1 Additional Drawings

If additional drawings are required, prepare them using the specified electronic file format applying the same graphic standards specified for original drawings. The title block and drawing border to be used for any new final record drawings must be identical to that used on the contract drawings.

2.1.1.1 Sheet Numbers and File Names

If a sheet needs to be added between two sequential sheets, append a Supplemental Drawing Designator in accordance with ERDC/ITL TR-19-7 Adding a drawing sheet, and ERDC/ITL TR-19-6 Adding or deleting drawing sheets and index sheet procedures.

2.2 ADVANCED MODELING PACKAGE

For each Advanced Modeling Package submittal for both the Interim Record Model Package and the Final Record Model Package, submit in accordance with ERDC/ITL TR-19-7 and also provide the following items:

a. Advanced Modeling PxP: Provide an electronic copy of the most current approved version of the project Advanced Modeling PxP.

b. Electronic Files: Provide an electronic list (.txt file or similar), of all submitted electronic files including a description, directory, and file name for each file submitted. Identify which files have been produced from the Model and Facility Data. For all sheet files, include a list of the sheet titles and sheet numbers.

c. Advanced Modeling Submittal Checklist: Complete the USACE BIM/CIM Advanced Modeling Submittal Checklist and include with each submittal. Download the Checklist from the USACE CAD/BIM Technology Center website.

d. Advanced Modeling Files: Provide all native Advanced Modeling files associated with the production of the contract drawings and associated as-modeled drawings. Update and maintain in compliance with the Advanced Modeling formatting, content requirement, and standards in , in order to yield a complete and coordinated document package.

e. Quality Control (QC) Reports: Provide electronic PDFs of all QC reports and checklist utilized to ensure full compliance with the contract requirements and standards.

2.3 CERTIFICATION OF EPA DESIGNATED ITEMS

Submit the Certification of EPA Designated Items as required by FAR 52.223-9 Estimate of Percentage of Recovered Material Content for EPA Designated Items and FAR 52-223-17 Affirmative Procurement of EPA designated items in Service and Construction Contracts. Include on the certification form the following information: project name, project number, Contractor name, license number, Contractor address, and certification. The certification will read as follows and be signed and dated by the Contractor. "I hereby certify the information provided herein is accurate and that the requisition/procurement of all materials listed on this form comply with current EPA standards for recycled/recovered materials content. The following exemptions may apply to the non-procurement of recycled/recovered content materials:

a. The product does not meet appropriate performance standards;

b. The product is not available within a reasonable time frame;

c. The product is not available competitively (from two or more sources);

d. The product is only available at an unreasonable price (compared with a comparable non-recycled content product).

Record each product used in the project that has a requirement or option of containing recycled content in accordance with all state, local, and federal laws, noting total price, total value of post-industrial recycled content, total value of post-consumer recycled content, exemptions (a, b, c, or d, as indicated), and comments. Recycled content values may be determined by weight or volume percent, but must be consistent throughout.

2.4 CERTIFICATION OF USDA DESIGNATED ITEMS

Submit the Certification of USDA Designated Items as required by FAR 52-223-1 Bio-based Product Certifications and FAR 52.223-2 Affirmative Procurement of Biobased Products Under Service and Construction Contracts. Include on the certification form the following information: project name, project number, Contractor name, license number, Contractor address, and certification. The certification will read as follows and be signed and dated by the Contractor. "I hereby certify the information provided herein is accurate and that the requisition/procurement of all materials listed on this form comply with current USDA standards for biobased materials content. The following exemptions may apply to the non-procurement of biobased content materials:

a. The product does not meet appropriate performance standards;

b. The product is not available within a reasonable time frame;

c. The product is not available competitively (from two or more sources);

d. The product is only available at an unreasonable price (compared with a comparable bio-based content product).

Record each product used in the project that has a requirement or option of containing biobased content in accordance with all state, local, and federal laws, noting total price, total value of post-industrial recycled content, total value of post-consumer recycled content, total value of biobased content, exemptions (a, b, c, or d, as indicated), and comments.

Biobased content values may be determined by weight or volume percent, but must be consistent throughout.

2.5 PDF AS-BUILT FILES

Provide electronic PDF "plots" of all contract drawings sheets associated with the as-built drawing submittal. Compile and organize the PDF set to match the contract drawings. Bookmark and label the pages of the PDF file.

2.6 REDLINES AND MARKUPS

Provide PDFs of the current working redlines and/or markups complying with the as-builts drawing and markup requirements contained in this specification.

2.7 GEO-DATA-BASE FILES

Provide a SDSFIE/FGDC GeoReferenced personal GeoDataBase. For all information outside of the building walls, provide a personal GeoDataBase in .mdb format using the latest version of Spatial Data Standard for Facilities, Infrastructure, and Environment (SDSFIE) as the database structure. Provide a shell database to define the projection and database structure.

For all drawings within and including the exterior walls, utilize the advanced modeling formats described and referenced herein. Provide a short GeoDataBase read-me file explaining the deliverable. The read-me file will include a description of the software used to create the data, projection, and include the attribute tables used.

2.8 AS-BUILT OR ADVANCED MODELING RE-SUBMISSION REQUIREMENTS

If elements of an as-built submittal or advanced modeling package are rejected, provide the following for each re-submission, in addition to any information required in Section 01 33 00 SUBMITTAL PROCEDURES:

a. Re-submit all components required under paragraph As-Builts or Advanced Modeling Package, including a new Advanced Modeling Submittal Checklist and updated content in response to Government comments.

b. Provide a copy of all Government review comments.

c. Provide a disposition/response to each Government review comment for a back-check of the re-submission deliverable.

PART 3 EXECUTION

3.1 AS-BUILT DRAWINGS

Provide and maintain two black line print copies of the PDF contract drawings for As-Built Drawings. Maintain the as-builts throughout construction as red-lined hard copies on site and red-lined PDF files. Submit As-Built Drawings 30 days prior to Beneficial Occupancy Date (BOD).

3.1.1 Markup Guidelines

Make comments and markup the drawings complete without reference to letters, memos, or materials that are not part of the As-Built drawing. Show what was changed, how it was changed, where item(s) were relocated

and change related details. These working as-built markup prints must be neat, legible and accurate as follows:

a. Use base colors of red, green, and blue. Color code for changes as follows:

(1) Special (Blue) - Items requiring special information, coordination, or special detailing or detailing notes.

(2) Deletions (Red) - Over-strike deleted graphic items (lines), lettering in notes and leaders.

(3) Additions (Green) - Added items, lettering in notes and leaders.

b. Provide a legend if colors other than the "base" colors of red, green, and blue are used.

c. Add and denote any additional equipment or material facilities, service lines, incorporated under As-Built Revisions if not already shown in legend.

d. Use frequent written explanations on markup drawings to describe changes. Do not totally rely on graphic means to convey the revision.

e. Use legible lettering and precise and clear digital values when marking prints. Clarify ambiguities concerning the nature and application of change involved.

f. Wherever a revision is made, also make changes to related section views, details, legend, profiles, plans and elevation views, schedules, notes and call out designations, and mark accordingly to avoid conflicting data on all other sheets.

g. For deletions, cross out all features, data and captions that relate to that revision.

h. For changes on small-scale drawings and in restricted areas, provide large-scale inserts, with leaders to the applicable location.

i. Indicate one of the following when attaching a print or sketch to a markup print:

1) Add an entire drawing to contract drawings

2) Change the contract drawing to show changes on the drawing.

3) Provided for reference only to further detail the initial design.

j. Incorporate all shop and fabrication drawings into the markup drawings.

3.1.2 As-Built Drawings Content

Revise As-Built Drawings and red-lined PDF files in accordance with ERDC/ITL TR-19-6 and ERDC/ITL TR-19-7. Keep these working as-built markup drawings current on a weekly basis and at least one set available on the jobsite at all times. Changes from the contract drawings which are made during construction or additional information which might be uncovered in the course of construction must be accurately and neatly recorded as they occur by means of details and notes. Submit the working as-built markup

drawings for approval prior to submission of each monthly pay estimate. For failure to maintain the working and final record drawings as specified herein, the Contracting Officer will withhold 10 percent of the monthly progress payment until approval of updated drawings. Show on the as-built drawings, but not limited to, the following information:

a. The actual location, kinds and sizes of all sub-surface utility lines. In order that the location of these lines and appurtenances may be determined in the event the surface openings or indicators become covered over or obscured, show by offset dimensions to two permanently fixed surface features the end of each run including each change in direction on the record drawings. Locate valves, splice boxes and similar appurtenances by dimensioning along the utility run from a reference point. Also record the average depth below the surface of each run.

b. The location and dimensions of any changes within the building structure.

c. Layout and schematic drawings of electrical circuits and piping.

d. Correct grade, elevations, cross section, or alignment of roads, earthwork, structures or utilities if any changes were made from contract plans.

e. Changes in details of design or additional information obtained from working drawings specified to be prepared or furnished by the Contractor; including but not limited to shop drawings, fabrication, erection, installation plans and placing details, pipe sizes, insulation material, dimensions of equipment, and foundations.

f. The topography, invert elevations and grades of drainage installed or affected as part of the project construction.

g. Changes or Revisions which result from the final inspection.

h. Where contract drawings or specifications present options, show only the option selected for construction on the working as-built markup drawings.

i. If borrow material for this project is from sources on Government property, or if Government property is used as a spoil area, furnish a contour map of the final borrow pit/spoil area elevations.

j. Systems designed or enhanced by the Contractor, such as HVAC controls, fire alarm, fire sprinkler, and irrigation systems.

k. Changes in location of equipment and architectural features.

l. Modifications.

m. Actual location of anchors, construction and control joints, etc., in concrete.

n. Unusual or uncharted obstructions that are encountered in the contract work area during construction.

o. Location, extent, thickness, and size of stone protection particularly where it will be normally submerged by water.

3.2 RECORD DRAWING FILES

If additional drawings are required, prepare them using the specified electronic file format applying the same graphic standards specified for original drawings. The title block and drawing border to be used for any new final record drawings must be identical to that used on the contract drawings. Accomplish additions and corrections to the contract drawings using CAD files. Provide all program files and hardware necessary to prepare final PDF record drawings. The Contracting Officer will review final PDF record drawings for accuracy and return them to the Contractor for required corrections, changes, additions, and deletions.

3.2.1 Rename the CAD Drawing files

Rename the CAD Drawing files using the contract number as the Project Code field,(e.g., W91238-15-C-10A-102.DGN) as instructed in the Pre-Construction conference. Use only those renamed files for the Marked-up changes. Make all changes on the layer/level as the original item.

a. For MicroStation files (DGN), enter all as-built delta changes and notations on:

- Level #63
- Level/Layer Name contains: ANNO-REVS
- Level/Layer Description: Revisions

b. When final revisions have been completed, show the wording "RECORD DRAWING AS-BUILTS" followed by the name of the Contractor in letters at least 3/16 inch high on the cover sheet drawing. Date RECORD DRAWING AS-BUILTS" drawing revisions in the revision block.

c. Within 20 days after Government approval of all of the working record drawings for a phase of work, prepare the final CAD record drawings for that phase of work and submit PDF drawing files and two sets of prints for review and approval. The Government will promptly return one set of prints annotated with any necessary corrections. Within 10 days revise the CAD files accordingly at no additional cost and submit one set of final prints for the completed phase of work to the Government. Within days of substantial completion of all phases of work, submit the final record drawing package for the entire project. Submit one set of electronic CAD files, and one set of the approved working record PDF and or program files with two sets of prints. The CAD files must be complete in all details and identical in form and function to the CAD drawing files supplied by the Government. Prepare MicroStation files for transmittal using the Packager (Archive). Make any transactions or adjustments necessary to accomplish this. The Government reserves the right to reject any drawing files it deems incompatible with the customer's CAD system. Paper prints, drawing files and storage media submitted will become the property of the Government upon final approval. Failure to submit final record PDF drawing files, CAD files and marked prints as specified will be cause for withholding any payment due under this contract. Approval and acceptance of final record drawings must be accomplished before final payment is made.

3.3 RECORD DRAWINGS

Prepare final record drawings after the completion of each definable feature of work as listed in the Contractor Quality Control Plan (such as Foundations, Utilities, or Structural Steel as appropriate for the project). Transfer the changes from the approved working as-built markup drawings to the original electronic CAD drawing files. Modify the as-built CAD drawing files to correctly show the features of the project as-built by bringing the working CAD drawing set into agreement with approved working as-built markup drawings, and adding such additional drawings as may be necessary. Refer to ERDC/ITL TR-19-6. Jointly review the working as-built markup drawings with printouts from working as-built CAD drawing PDF files for accuracy and completeness. Monthly review of working as-built CAD drawing PDF file printouts must cover all sheets revised since the previous review. These PDF drawing files are part of the permanent records of this project. Any drawings damaged or lost must be satisfactorily replaced at no expense to the Government.

Drawing revisions (include within change order price the cost to change working and final record drawings to reflect revisions) and compliance with the following procedures.

a. Follow directions in the revision for posting descriptive changes.

b. The revision delta size must be 5/16 inch unless the area where the delta is to be placed is crowded. Use a smaller size delta for crowded areas.

c. Place a revision delta at the location of each deletion.

d. For new details or sections which are added to a drawing, place a revision delta by the detail or section title.

e. For minor changes, place a revision delta by the area changed on the drawing (each location).

f. For major changes to a drawing, place a revision delta by the title of the affected plan, section, or detail at each location.

g. For changes to schedules or drawings, place a revision delta either by the schedule heading or by the change in the schedule.

3.3.1 Final Record Drawing Package

Submit the final record PDF and CAD drawings package for the entire project within 20 days of substantial completion of all phases of work. Submit one set of ANSI D size PDF and CAD files, two sets of ANSI D size prints and one set of the approved working record drawings. The package must be complete in all details and identical in form and function to the contract drawing files supplied by the Government.

3.4 FINAL APPROVED SHOP DRAWINGS

Submit final approved project shop drawings 30 days after transfer of the completed facility.

3.5 CONSTRUCTION CONTRACT SPECIFICATIONS

Submit final PDF file record construction contract specifications,

including revisions thereto, 30 days after transfer of the completed facility.

3.6 AS-BUILT RECORD OF EQUIPMENT AND MATERIALS

Furnish one copy of preliminary record of equipment and materials used on the project 15 days prior to final inspection. This preliminary submittal will be reviewed and returned 15 days after final inspection with Government comments. Submit two sets of final record of equipment and materials 30 days after final inspection. Key the designations to the related area depicted on the contract drawings. List the following data:

RECORD OF DESIGNATED EQUIPMENT AND MATERIALS DATA				
Description	Specification Section	Manufacturer and Catalog, Model, and Serial Number	Composition and Size	Where Used

3.7 CLEANUP

Leave premises "broom clean." Clean interior and exterior glass surfaces exposed to view; remove temporary labels, stains and foreign substances; polish transparent and glossy surfaces; vacuum carpeted and soft surfaces. Clean equipment and fixtures to a sanitary condition. Clean or replace filters of operating equipment. Clean debris from roofs, gutters, downspouts and drainage systems. Sweep paved areas and rake clean landscaped areas. Remove waste and surplus materials, rubbish and construction facilities from the site.

1.2 DEFINITIONS

1.2.1 ACM

Asbestos Containing Materials.

1.2.2 Amended Water

Water containing a wetting agent or surfactant with a maximum surface tension of 0.00042 psi.

1.2.3 Area Sampling

Sampling of asbestos fiber concentrations which approximates the concentrations of asbestos in the theoretical breathing zone but is not actually collected in the breathing zone of an employee.

1.2.4 Asbestos

The term asbestos includes chrysotile, amosite, crocidolite, tremolite asbestos, anthophyllite asbestos, and actinolite asbestos and any of these minerals that has been chemically treated or altered. Materials are considered to contain asbestos if the asbestos content of the material is determined to be at least one percent.

1.2.5 Asbestos Control Area

That area where asbestos removal operations are performed which is isolated by physical boundaries which assist in the prevention of the uncontrolled release of asbestos dust, fibers, or debris.

1.2.6 Asbestos Fibers

Those fibers having an aspect ratio of at least 3:1 and longer than 5 micrometers as determined by National Institute for Occupational Safety and Health (NIOSH) Method 7400.

1.2.7 Asbestos Permissible Exposure Limit

0.1 fibers per cubic centimeter of air as an 8-hour time weighted average measured in the breathing zone as defined by 29 CFR 1926.1101 or other Federal legislation having legal jurisdiction for the protection of workers health.

1.2.8 Authorized Person

Any person authorized by the Contractor and required by work duties to be present in the regulated areas.

1.2.9 Background

The ambient airborne asbestos concentration in an uncontaminated area as measured prior to any asbestos hazard abatement efforts. Background concentrations for other (contaminated) areas are measured in similar but asbestos free locations.

1.2.10 Competent Person (CP)

A person meeting the requirements for competent person as specified in 29 CFR 1926.1101 including a person capable of identifying existing asbestos hazards in the workplace and selecting the appropriate control strategy for asbestos exposure, who has the authority to take prompt corrective measures to eliminate them, and is specifically trained in a training course which meet the criteria of EPA's Model Accreditation Plan (40 CFR 763) for project designer or supervisor, or its equivalent. The competent person must have a current asbestos contractors or supervisors license.

1.2.11 Contractor

The Contractor is that individual, or entity under contract to perform the herein listed work.

1.2.12 Disposal Bag

A 6-mil thick, leak-tight plastic bag, pre-labeled in accordance with 29 CFR 1926.1101, used for transporting asbestos waste from containment to disposal site.

1.2.13 Disturbance

Activities that disrupt the matrix of ACM, crumble or pulverize ACM, or generate visible debris from ACM. Disturbance includes cutting away small amounts of ACM, no greater than the amount which can be contained in one standard sized glovebag or waste bag, not larger than 60 inches in length and width in order to access a building component.

1.2.14 Encapsulation

The abatement of an asbestos hazard through the appropriate use of chemical encapsulants.

1.2.15 Encapsulants

Specific materials in various forms used to chemically or physically entrap asbestos fibers in various configurations to prevent these fibers from becoming airborne. There are four types of encapsulants as follows which must comply with performance requirements as specified herein.

a. Removal Encapsulant (can be used as a wetting agent)

b. Bridging Encapsulant (used to provide a tough, durable surface coating to asbestos containing material)

c. Penetrating Encapsulant (used to penetrate the asbestos containing material encapsulating all asbestos fibers and preventing fiber release due to routine mechanical damage)

d. Lock-Down Encapsulant (used to seal off or "lock-down" minute asbestos fibers left on surfaces from which asbestos containing material has been removed).

1.2.16 Friable Asbestos Material

A term defined in 40 CFR 61-SUBPART M and EPA 340/1-90/018 meaning any material which contains more than 1 percent asbestos, as determined using the method specified in 40 CFR 763, Polarized Light Microscopy (PLM), that when dry, can be crumbled, pulverized, or reduced to powder by hand pressure.

1.2.17 Glovebag Technique

Those asbestos removal and control techniques put forth in 29 CFR 1926.1101.

1.2.18 Government Consultant (GC)

That qualified person employed directly by the Government to monitor, sample, inspect the work or in some other way advise the Contracting Officer. The GC is normally a private consultant, but can be an employee of the Government.

1.2.19 HEPA Filter Equipment

High efficiency particulate air (HEPA) filtered vacuum and exhaust ventilation equipment with a filter system capable of collecting and retaining asbestos fibers. Filters must retain 99.97 percent of particles 0.3 microns or larger as indicated in UL 586.

1.2.20 Model Accreditation Plan (MAP)

USEPA training accreditation requirements for persons who work with asbestos as specified in 40 CFR 763.

1.2.21 Negative Pressure Enclosure (NPE)

That engineering control technique described as a negative pressure enclosure in 29 CFR 1926.1101.

1.2.22 NESHAP

National Emission Standards for Hazardous Air Pollutants. The USEPA NESHAP regulation for asbestos is at 40 CFR 61-SUBPART M.

1.2.23 Nonfriable Asbestos Material

Material that contains asbestos in which the fibers have been immobilized by a bonding agent, coating, binder, or other material so that the asbestos is well bound and will not normally release asbestos fibers during any appropriate use, handling, storage or transportation. It is understood that asbestos fibers may be released under other conditions such as demolition, removal, or mishap.

1.2.24 Permissible Exposure Limits (PELs)

1.2.24.1 PEL-Time Weighted Average(TWA)

Concentration of asbestos not in excess of 0.1 fibers per cubic centimeter of air (f/cc) as an 8-hour time weighted average (TWA).

1.2.24.2 PEL-Excursion Limit

An airborne concentration of asbestos not in excess of 1.0 f/cc of air as averaged over a sampling period of 30 minutes.

1.2.25 Personal Sampling

Air sampling which is performed to determine asbestos fiber concentrations within the breathing zone of a specific employee, as performed in accordance with 29 CFR 1926.1101.

1.2.26 Private Qualified Person (PQP)

That qualified person hired by the Contractor to perform the herein listed tasks.

1.2.27 Qualified Person (QP)

A Registered Architect, Professional Engineer, Certified Industrial Hygienist, consultant or other qualified person who has successfully completed training and is therefore accredited under a legitimate State Model Accreditation Plan as described in 40 CFR 763 as a Building Inspector, Contractor/Supervisor Abatement Worker, and Asbestos Project Designer; and has successfully completed the National Institute of Occupational Safety and Health (NIOSH) 582 course "Sampling and Evaluating Airborne Asbestos Dust" or equivalent. The QP must be qualified to perform visual inspections as indicated in ASTM E1368. The QP must be appropriately licensed in the State of New Mexico.

1.2.28 TEM

Refers to Transmission Electron Microscopy.

1.2.29 Time Weighted Average (TWA)

The TWA is an 8-hour time weighted average airborne concentration of asbestos fibers.

1.2.30 Transite

A generic name for asbestos cement wallboard and pipe.

1.2.31 Wetting Agent

A chemical added to water to reduce the water's surface tension thereby increasing the water's ability to soak into the material to which it is applied. An equivalent wetting agent must have a surface tension of at most 0.00042 psi.

1.2.32 Worker

Individual (not designated as the Competent Person or a supervisor) who

performs asbestos work and has completed asbestos worker training required by 29 CFR 1926.1101, to include EPA Model Accreditation Plan (MAP) "Worker" training; accreditation, if required by the OSHA Class of work to be performed or by the state where the work is to be performed. The worker must be appropriately licensed.

1.3 REQUIREMENTS

1.3.1 Description of Work

The work covered by this section includes the handling and control of asbestos containing materials and describes some of the resultant procedures and equipment required to protect workers, the environment and occupants of the building or area, or both, from contact with airborne asbestos fibers. The work also includes the disposal of any asbestos containing materials generated by the work. More specific operational procedures must be outlined in the Asbestos Hazard Abatement Plan called for elsewhere in this specification. The asbestos work includes the demolition and removal of asbestos-containing materials located in Building 22000, and governed by 40 CFR 763. Under normal conditions non-friable or chemically bound materials containing asbestos would not be considered hazardous; however, this material may release airborne asbestos fibers during demolition and removal and therefore must be handled in accordance with the removal and disposal procedures as specified herein. Provide negative pressure enclosure techniques as outlined in this specification. The buildings will be evacuated during the asbestos abatement work. A competent person must supervise asbestos removal work as specified herein.

1.3.2 Unexpected Discovery of Asbestos

Notify the Contracting Officer if any previously untested building components suspected to contain asbestos are impacted by the work.

1.3.3 Medical Requirements

Provide medical requirements including but not limited to medical surveillance and medical record keeping as listed in 29 CFR 1926.1101.

1.3.3.1 Medical Examinations

Before exposure to airborne asbestos fibers, provide workers with a comprehensive medical examination as required by 29 CFR 1926.1101 or other pertinent State or local directives. This requirement must have been satisfied within the 12 months prior to the start of work on this contract. The same medical examination must be given on an annual basis to employees engaged in an occupation involving asbestos and within 30 calendar days before or after the termination of employment in such occupation. Specifically identify x-ray films of asbestos workers to the consulting radiologist and mark medical record jackets with the word "ASBESTOS."

1.3.3.2 Medical Records

Maintain complete and accurate records of employees' medical examinations, medical records, and exposure data for a period of 50 years after termination of employment and make records of the required medical examinations and exposure data available for inspection and copying to: The Assistant Secretary of Labor for Occupational Safety and Health

(OSHA), or authorized representatives of them, and an employee's physician upon the request of the employee or former employee.

1.3.4 Employee Training

Submit certificates, prior to the start of work but after the main abatement submittal, signed by each employee indicating that the employee has received training in the proper handling of materials and wastes that contain asbestos in accordance with 40 CFR 763; understands the health implications and risks involved, including the illnesses possible from exposure to airborne asbestos fibers; understands the use and limits of the respiratory equipment to be used; and understands the results of monitoring of airborne quantities of asbestos as related to health and respiratory equipment as indicated in 29 CFR 1926.1101 on an initial and annual basis. Organize certificates by individual worker, not grouped by type of certification. Post appropriate evidence of compliance with the training requirements of 40 CFR 763. Train personnel involved in the asbestos control work in accordance with United States Environmental Protection Agency (USEPA) Asbestos Hazard Emergency Response Act (AHERA) training criteria or State training criteria whichever is more stringent. Document the training by providing: dates of training, training entity, course outline, names of instructors, and qualifications of instructors upon request by the Contracting Officer. Furnish each employee with respirator training and fit testing administered by the PQP as required by 29 CFR 1926.1101 and 29 CFR 1926.103. Fully cover engineering and other hazard control techniques and procedures. Asbestos workers must have a current asbestos worker's license.

1.3.5 Permits, Licenses, and Notifications

Prior to the start of work, obtain necessary permits and licenses in conjunction with asbestos removal, encapsulation, hauling, and disposition, and furnish notification of such actions required by Federal, State, regional, and local authorities. Notify the New Mexico Environment Department and the Contracting Officer in writing 10 working days prior to commencement of work in accordance with 40 CFR 61-SUBPART M. Notify the Contracting Officer and other appropriate Government agencies in writing 20 working days prior to the start of asbestos work as indicated in applicable laws, ordinances, criteria, rules, and regulations. Submit copies of all Notifications to the Contracting Officer.

1.3.6 Environment, Safety and Health Compliance

In addition to detailed requirements of this specification, comply with those applicable laws, ordinances, criteria, rules, and regulations of Federal, State, regional, and local authorities regarding handling, storing, transporting, and disposing of asbestos waste materials. Comply with the applicable requirements of the current issue of EM 385-1-1, 29 CFR 1926.1101, 40 CFR 61-SUBPART A, 40 CFR 61-SUBPART M, and 40 CFR 763. Submit matters of interpretation of standards to the appropriate administrative agency for resolution before starting the work. Where the requirements of this specification, applicable laws, rules, criteria, ordinances, regulations, and referenced documents vary, the most stringent requirement as defined by the Government apply.

1.3.7 Respiratory Protection Program

Establish and implement a respirator program as required by 29 CFR 1926.1101, and 29 CFR 1926.103. Submit a written description of

the program to the Contracting Officer. Submit a written program manual or operating procedure including methods of compliance with regulatory statutes.

1.3.7.1 Respirator Program Records

Submit records of the respirator program as required by 29 CFR 1926.103, and 29 CFR 1926.1101.

1.3.7.2 Respirator Fit Testing

The Contractor's PQP must conduct a qualitative or quantitative fit test conforming to 29 CFR 1926.103 for each worker required to wear a respirator, and any authorized visitors who enter a regulated area where respirators are required to be worn. A respirator fit test must be performed prior to initially wearing a respirator and every 12 months thereafter. If physical changes develop that will affect the fit, a new fit test must be performed. Functional fit checks must be performed each time a respirator is put on and in accordance with the manufacturer's recommendation.

1.3.7.3 Respirator Selection and Use Requirements

Provide respirators and ensure that they are used as required by 29 CFR 1926.1101 and in accordance with CGA G-7 and the manufacturer's recommendations. Respirators must be approved by the National Institute for Occupational Safety and Health NIOSH, under the provisions of 42 CFR 84, for use in environments containing airborne asbestos fibers. For air-purifying respirators, the particulate filter must be high-efficiency particulate air (HEPA)/(N-,R-,P-100). The initial respirator selection and the decisions regarding the upgrading or downgrading of respirator type must be made by the Contractor's Designated IH based on the measured or anticipated airborne asbestos fiber concentrations to be encountered.

1.3.8 Asbestos Hazard Control Supervisor

The Contractor must be represented on site by a supervisor, trained using the model Contractor accreditation plan as indicated in the Federal statutes for all portions of the herein listed work.

1.3.9 Hazard Communication

Adhere to all parts of 29 CFR 1926.59 and provide the Contracting Officer with a copy of the Safety Data Sheets (SDS) for all materials brought to the site.

1.3.10 Asbestos Hazard Abatement Plan

Submit a detailed plan of the safety precautions such as lockout, tagout, tryout, fall protection, safety data sheets (SDSs) of any chemicals planned on being used (such as, spray adhesives, chemical strippers, or encapsulants), and confined space entry procedures and equipment and work procedures to be used in the removal and demolition of materials containing asbestos. The plan, not to be combined with other hazard abatement plans, must be prepared, signed, and sealed by the PQP. Provide a Table of Contents for each abatement submittal, which follows the sequence of requirements in the contract. The plan must include but not be limited to the precise personal protective equipment to be used including, but not limited to, respiratory protection, type of whole-body

protection, the location of asbestos control areas including clean and dirty areas, buffer zones, showers, storage areas, change rooms, encapsulation method, interface of trades involved in the construction, sequencing of asbestos related work, disposal plan, type of wetting agent and asbestos sealer to be used, locations of local exhaust equipment, planned air monitoring strategies, and a detailed description of the method to be employed in order to control environmental pollution. The plan must also include (both fire and medical emergency) response plans and an Activity Hazard Analyses (AHAs) in accordance with EM 385-1-1. The Asbestos Hazard Abatement Plan must be approved in writing prior to starting any asbestos work. The Contractor, Asbestos Hazard Control Supervisor, CP and PQP must meet with the Contracting Officer prior to beginning work, to discuss in detail the Asbestos Hazard Abatement Plan, including work procedures and safety precautions. Once approved by the Contracting Officer, the plan will be enforced as if an addition to the specification. Any changes required in the specification as a result of the plan must be identified specifically in the plan to allow for free discussion and approval by the Contracting Officer prior to starting work.

1.3.11 Testing Laboratory

Submit the name, address, and telephone number of each testing laboratory selected for the analysis, and reporting of airborne concentrations of asbestos fibers along with evidence that each laboratory selected holds the appropriate State license and permits and certification that each laboratory is American Industrial Hygiene Association (AIHA) accredited and that persons counting the samples have been judged proficient by current inclusion on the AIHA Asbestos Analysis Registry (AAR) and successful participation of the laboratory in the Proficiency Analytical Testing (PAT) Program. Where analysis to determine asbestos content in bulk materials or transmission electron microscopy is required, submit evidence that the laboratory is accredited by the National Institute of Science and Technology (NIST) under National Voluntary Laboratory Accreditation Program (NVLAP) for asbestos analysis. The testing laboratory firm must be independent of the asbestos contractor and must have no employee or employer relationship which could constitute a conflict of interest.

1.3.12 Landfill Approval

Submit written evidence that the landfill is approved for asbestos disposal by the U.S. Environmental Protection Agency, Region 6, New Mexico Environment Department's Air Quality Bureau, and local regulatory agencies. Within three working days after delivery, submit detailed delivery tickets, prepared, signed, and dated by an agent of the landfill, certifying the amount of asbestos materials delivered to the landfill. Submit a copy of the waste shipment records within one day of the shipment leaving the project site.

1.3.13 Transporter Certification

Submit written evidence that the transporter is approved to transport asbestos waste in accordance with the DOT requirements of 49 CFR 171, 49 CFR 172 and 49 CFR 173 as well as registration requirements of 49 CFR 107 and all other State and local regulatory agency requirements.

1.3.14 Medical Certification

Provide a written certification for each worker and supervisor, signed by

a licensed physician indicating that the worker and supervisor has met or exceeded all of the medical prerequisites listed herein and in 29 CFR 1926.1101 and 29 CFR 1926.103 as prescribed by law. Submit certificates prior to the start of work but after the main abatement submittal.

1.4 SUBMITTALS

Government approval is required for submittals with a "G" designation; submittals not having a "G" designation are for Contractor Quality Control approval. Submit the following in accordance with Section 01 33 00 SUBMITTAL PROCEDURES:

SD-03 Product Data

Amended Water; G

Safety Data Sheets (SDS) for All Materials; G

Encapsulants; G

Respirators; G

Local Exhaust Equipment; G

Pressure Differential Automatic Recording Instrument; G

Vacuums; G

SD-06 Test Reports

Air Sampling Results; G

Pressure Differential Recordings for Local Exhaust System; G

Clearance Sampling; G

1.5 QUALITY ASSURANCE

1.5.1 Private Qualified Person Documentation

Submit the name, address, and telephone number of the Private Qualified Person (PQP) selected to prepare the Asbestos Hazard Abatement Plan, direct monitoring and training, and documented evidence that the PQP has successfully completed training in and is accredited and where required is certified as, a Building Inspector, Contractor/Supervisor Abatement Worker, and Asbestos Project Designer as described by 40 CFR 763 and has successfully completed the National Institute of Occupational Safety and Health (NIOSH) 582 course "Sampling and Evaluating Airborne Asbestos Dust" or equivalent. The PQP must be appropriately licensed as a Project Monitor. The PQP and the asbestos contractor must not have an employee/employer relationship or financial relationship which could constitute a conflict of interest. The PQP must be a first-tier subcontractor.

1.5.2 Competent Person Documentation

The Competent Person must be experienced in the administration and supervision of asbestos abatement projects including exposure assessment and monitoring, work practices, abatement methods, protective measures for personnel, setting up and inspecting asbestos abatement work areas, evaluating the integrity of containment barriers, placement and operation of local exhaust systems, ACM generated waste containment and disposal procedures, decontamination units installation and maintenance requirements, site safety and health requirements, and notification of

other employees onsite. The Competent Person must be on-site at all times when asbestos abatement activities are underway. Submit training certification and a current Asbestos Contractor's and Supervisor's License. Submit evidence that the Competent Person has a minimum of 2 years of on-the-job asbestos abatement experience relevant to OSHA competent person requirements.

1.5.3 Worker's License

Submit documentation that workers meet the requirements of 29 CFR 1926.1101, 40 CFR 61-SUBPART M and have a current Asbestos Workers License.

1.5.4 Contractor's License

Submit a copy of the asbestos contractor's license issued by the State of New Mexico. Submit the following certification along with the license: "I certify that the personnel I am responsible for during the course of this project fully understand the contents of 29 CFR 1926.1101, 40 CFR 61-SUBPART MEM 385-1-1, and the Federal, State and local requirements for those asbestos abatement activities that they will be involved in." This certification statement must be signed by the Company's President or Chief Executive.

1.5.5 Air Sampling Results

Complete fiber counting and provide results to the PQP and GC for review within 16 hours of the "time off" of the sample pump. Notify the Contracting Officer immediately of any airborne levels of asbestos fibers in excess of the acceptable limits. Submit sampling results to the Contracting Officer and the affected Contractor employees where required by law within three working days, signed by the testing laboratory employee performing air sampling, the employee that analyzed the sample, and the PQP and GC. Notify the Contractor and the Contracting Officer immediately of any variance in the pressure differential which could cause adjacent unsealed areas to have asbestos fiber concentrations in excess of 0.01 fibers per cubic centimeter or background whichever is higher. In no circumstance must levels exceed 0.1 fibers per cubic centimeter.

1.5.6 Pressure Differential Recordings for Local Exhaust System

Provide a local exhaust system that creates a negative pressure of at least 0.02 inches of water relative to the pressure external to the enclosure and operate it continuously, 24-hours a day, until the temporary enclosure of the asbestos control area is removed. Submit pressure differential recordings for each work day to the PQP and GC for review and to the Contracting Officer within 24-hours from the end of each work day.

1.5.7 Federal, State or Local Citations on Previous Projects

Submit a statement, signed by an officer of the company, containing a record of any citations issued by Federal, State or local regulatory agencies relating to asbestos activities within the last 5 years (including projects, dates, and resolutions); a list of penalties incurred through non-compliance with asbestos project specifications, including liquidated damages, overruns in scheduled time limitations and resolutions; and situations in which an asbestos-related contract has been terminated (including projects, dates, and reasons for terminations). If there are none, a negative declaration signed by an officer of the company must be provided.

1.5.8 Preconstruction Conference

Conduct a safety preconstruction conference to discuss the details of the Asbestos Hazard Abatement Plan, Accident Prevention Plan (APP) including the AHAs required in specification Section 01 35 26 GOVERNMENTAL SAFETY REQUIREMENTS. The safety preconstruction conference must include the Contractor and their Designated Competent Person, Designated IH and Project Supervisor and the Contracting Officer. Deficiencies in the APP will be discussed. Onsite work must not begin until the APP has been accepted.

1.6 SECURITY

A log book must be kept documenting entry into and out of the regulated area. Entry into regulated areas must only be by personnel authorized by the Contractor and the Contracting Officer. Personnel authorized to enter regulated areas must be trained, medically evaluated, and wear the required personal protective equipment.

1.7 EQUIPMENT

1.7.1 Rental Equipment

Provide a copy of the written notification to the rental company concerning the intended use of the equipment and the possibility of asbestos contamination of the equipment.

PART 2 PRODUCTS

2.1 ENCAPSULANTS

Encapsulants must conform to current USEPA requirements, contain no toxic or hazardous substances as defined in 29 CFR 1926.59, and conform to the following performance requirements.

2.1.1 Removal Encapsulants

Requirement	Test Standard
Flame Spread - 25, Smoke Emission - 50	ASTM E84
Life Expectancy - 20 years	ASTM C732 Accelerated Aging Test
Permeability - Minimum 0.4 perms	ASTM E96/E96M
Fire Resistance - Negligible effect on fire resistance rating over 3-hour test (Classified by UL for use over fibrous and cementitious sprayed fireproofing)	ASTM E119
Impact Resistance - Minimum 43 in/lb	ASTM D2794 Gardner Impact Test

Requirement	Test Standard
Flexibility - no rupture or cracking	ASTM D522/D522M Mandrel Bend Test

2.1.2 Bridging Encapsulant

Requirement	Test Standard
Flame Spread - 25, Smoke Emission - 50	ASTM E84
Life Expectancy - 20 years	ASTM C732 Accelerated Aging Test
Permeability - Minimum 0.4 perms	ASTM E96/E96M
Fire Resistance - Negligible effect on fire resistance rating over 3-hour test (Classified by UL for use over fibrous and cementitious sprayed fireproofing)	ASTM E119
Impact Resistance - Minimum 43 in/lb	ASTM D2794 Gardner Impact Test
Flexibility - no rupture or cracking	ASTM D522/D522M Mandrel Bend Test

2.1.3 Penetrating Encapsulant

Requirement	Test Standard
Flame Spread - 25, Smoke Emission - 50	ASTM E84
Life Expectancy - 20 years	ASTM C732 Accelerated Aging Test
Permeability - Minimum 0.4 perms	ASTM E96/E96M
Cohesion/Adhesion Test - 50 pounds of force/foot	ASTM E119
Fire Resistance - Negligible affect on fire resistance rating over 3-hour test (Classified by UL for use over fibrous and cementitious sprayed fireproofing)	ASTM E119

Requirement	Test Standard
Impact Resistance - Minimum 43 in/lb	ASTM D2794 Gardner Impact Test
Flexibility - no rupture or cracking	ASTM D522/D522M Mandrel Bend Test

2.1.4 Lock-down Encapsulant

Requirement	Test Standard
Flame Spread - 25, Smoke Emission - 50	ASTM E84
Life Expectancy - 20 years	ASTM C732 Accelerated Aging Test
Permeability - Minimum 0.4 perms	ASTM E96/E96M
Fire Resistance - Negligible effect on fire resistance rating over 3-hour test (Tested with fireproofing over encapsulant applied directly to steel member)	ASTM E119
Bond Strength: 100 pounds of force/foot	ASTM E736/E736M
(Tests compatibility with cementitious and fibrous fireproofing)	

2.2 DUCT TAPE

Industrial grade duct tape of appropriate widths suitable for bonding sheet plastic and disposal container.

2.3 DISPOSAL CONTAINERS

Leak-tight (defined as solids, liquids, or dust that cannot escape or spill out) disposal containers must be provided for ACM wastes as required by 29 CFR 1926.1101. Disposal containers can be in the form of:

a. Disposal Bags

b. Fiberboard Drums

c. Cardboard Boxes

2.4 SHEET PLASTIC

Sheet plastic must be polyethylene of 6 mil minimum thickness and must be provided in the largest sheet size necessary to minimize seams. Film must be clear, frosted, or black and conform to ASTM D4397, except as specified

below.

2.4.1 Flame Resistant

Where a potential for fire exists, flame-resistant sheets must be provided. Film must be frosted or black and must conform to the requirements of NFPA 701.

2.4.2 Reinforced

Reinforced sheets must be provided where high skin strength is required, such as where it constitutes the only barrier between the regulated area and the outdoor environment. The sheet stock must consist of translucent, nylon-reinforced or woven-polyethylene thread laminated between 2 layers of polyethylene film. Film must meet flame resistant standards of NFPA 701.

2.5 MASTIC REMOVING SOLVENT

Mastic removing solvent must be nonflammable and must not contain methylene chloride, glycol ether, or halogenated hydrocarbons. Solvents used onsite must have a flash point greater than 140 degrees F.

2.6 LEAK-TIGHT WRAPPING

Two layers of 6 mil minimum thick polyethylene sheet stock must be used for the containment of removed asbestos-containing components or materials such as large tanks, boilers, insulated pipe segments and other materials. Upon placement of the ACM component or material, each layer must be individually leak-tight sealed with duct tape.

2.7 VIEWING INSPECTION WINDOW

Where feasible, a minimum of one clear, 1/8-inch thick, acrylic sheet, 18 by 24 inches, must be installed as a viewing inspection window at eye level on a wall in each containment enclosure. The windows must be sealed leak-tight with industrial grade duct tape.

2.8 WETTING AGENTS

Removal encapsulant (a penetrating encapsulant) must be provided when conducting removal abatement activities that require a longer removal time or are subject to rapid evaporation of amended water. The removal encapsulant must be capable of wetting the ACM and retarding fiber release during disturbance of the ACM greater than or equal to that provided by amended water. Performance requirements for penetrating encapsulants are specified in paragraph ENCAPSULANTS above.

PART 3 EXECUTION

3.1 EQUIPMENT

Provide the Contracting Officer or the Contracting Officer's Representative, with at least two complete sets of personal protective equipment as required for entry to and inspection of the asbestos control area. Provide equivalent training to the Contracting Officer or a designated representative as provided to Contractor employees in the use of the required personal protective equipment. Provide manufacturer's certificate of compliance for all equipment used to contain airborne asbestos fibers.

3.1.1 Air Monitoring Equipment

The Contractor's PQP must approve air monitoring equipment. The equipment must include, but must not be limited to:

a. High-volume sampling pumps that can be calibrated and operated at a constant airflow up to 16 liters per minute.

b. Low-volume, battery powered, body-attachable, portable personal pumps that can be calibrated to a constant airflow up to approximately 3.5 liters per minute, and a self-contained rechargeable power pack capable of sustaining the calibrated flow rate for a minimum of 10 hours. The pumps must also be equipped with an automatic flow control unit which must maintain a constant flow, even as filter resistance increases due to accumulation of fiber and debris on the filter surface.

c. Single use standard 25 mm diameter cassette, open face, 0.8-micron pore size, mixed cellulose ester membrane filters and cassettes with 50 mm electrically conductive extension cowl, and shrink bands for personal air sampling.

d. A flow calibrator capable of calibration to within plus or minus 2 percent of reading over a temperature range of minus 4 to plus 140 degrees F and traceable to a NIST primary standard.

3.1.2 Respirators

Select respirators from those approved by the National Institute for Occupational Safety and Health (NIOSH), Department of Health and Human Services.

3.1.2.1 Respirators for Handling Asbestos

Provide personnel engaged in pre-cleaning, cleanup, handling, encapsulation, removal, or demolition of asbestos materials with respiratory protection as indicated in 29 CFR 1926.1101 and 29 CFR 1926.103. Breathing air must comply with CGA G-7.

3.1.3 Exterior Whole-Body Protection

3.1.3.1 Outer Protective Clothing

Provide personnel exposed to asbestos with disposable "non-breathable," whole body outer protective clothing, head coverings, gloves, and foot coverings. Provide disposable plastic or rubber gloves to protect hands. Cloth gloves may be worn inside the plastic or rubber gloves for comfort but must not be used alone. Make sleeves secure at the wrists, make foot coverings secure at the ankles, and make clothing secure at the neck by the use of tape.

3.1.3.2 Work Clothing

Provide cloth work clothes for wear under the outer protective clothing and foot coverings and either dispose of or properly decontaminate them as recommended by the GC after each use.

3.1.3.3 Personal Decontamination Unit

Provide a temporary, negative pressure unit with a separate decontamination locker room and clean locker room with a shower that complies with 29 CFR 1926.51(f)(4)(ii) through (V) in between for personnel required to wear whole body protective clothing. Provide two separate lockers for each asbestos worker, one in each locker room. Keep street clothing and street shoes in the clean locker. HEPA vacuum and remove asbestos contaminated disposable protective clothing while still wearing respirators at the boundary of the asbestos work area and seal in impermeable bags or containers for disposal. Do not wear work clothing between home and work. Locate showers between the decontamination locker room and the clean locker room and require that all employees shower before changing into street clothes. Collect used shower water and filter with approved water filtration equipment to remove asbestos contamination. Wastewater filters must be installed in series with the first stage pore size 20 microns and the second stage pore size of 5 microns. Dispose of filters and residue as asbestos waste. Discharge clean water to the sanitary system. Dispose of asbestos contaminated work clothing as asbestos contaminated waste. Keep the floor of the decontamination unit's clean room dry and clean at all times. Proper housekeeping and hygiene requirements must be maintained. Provide soap and towels for showering, washing and drying. Cloth towels provided must be disposed of as ACM waste or must be laundered in accordance with 29 CFR 1926.1101. Physically attach the decontamination units to the asbestos control area. Construct both a personnel decontamination unit and an equipment decontamination unit onto and integral with each asbestos control area.

3.1.3.4 Eye Protection

Provide eye protection that complies with ANSI/ISEA Z87.1 when operations present a potential eye injury hazard. Provide goggles to personnel engaged in asbestos abatement operations when the use of a full face respirator is not required.

3.1.4 Regulated Areas

All Class I, II, and III asbestos work must be conducted within regulated areas. The regulated area must be demarcated to minimize the number of persons within the area and to protect persons outside the area from exposure to airborne asbestos. Control access to regulated areas, ensure that only authorized personnel enter, and verify that Contractor required medical surveillance, training and respiratory protection program requirements are met prior to allowing entrance.

3.1.5 Load-out Unit

Provide a temporary load-out unit that is adjacent and connected to the regulated area. Attach the load-out unit in a leak-tight manner to each regulated area.

3.1.6 Warning Signs and Labels

Provide bilingual warning signs printed in English and Spanish at all approaches to asbestos control areas. Locate signs at such a distance that personnel may read the sign and take the necessary protective steps required before entering the area. Provide labels and affix to all asbestos materials, scrap, waste, debris, and other products contaminated

with asbestos. Containers with preprinted warning labels conforming to the requirements are acceptable

3.1.6.1 Warning Sign

Provide vertical format conforming to 29 CFR 1926.200, and 29 CFR 1926.1101 minimum 20 by 14 inches displaying the following legend in the lower panel:

Legend	Notation
DANGER	one inch Sans Serif Gothic or Block
ASBESTOS	one inch Sans Serif Gothic or Block
MAY CAUSE CANCER	one inch Sans Serif Gothic or Block
CAUSES DAMAGE TO LUNGS	1/4 inch Sans Serif Gothic or Block
AUTHORIZED PERSONNEL ONLY	1/4 inch Sans Serif Gothic or Block
WEAR RESPIRATORY PROTECTION AND PROTECTIVE CLOTHING IN THIS AREA	1/4 inch Sans Serif Gothic or Block

Spacing between lines must be at least equal to the height of the upper of any two lines.

3.1.6.2 Warning Labels

Provide labels conforming to 29 CFR 1926.1101 of sufficient size to be clearly legible, displaying the following legend:

DANGER
CONTAINS ASBESTOS FIBERS
MAY CAUSE CANCER
CAUSES DAMAGE TO LUNGS
DO NOT BREATHE DUST AVOID CREATING DUST

3.1.7 Local Exhaust System

Provide a local exhaust system in the asbestos control area in accordance with ASSP Z9.2 and 29 CFR 1926.1101 that will provide at least four air changes per hour inside of the negative pressure enclosure. Local exhaust equipment must be operated 24-hours per day, until the asbestos control area is removed and must be leak proof to the filter and equipped with

HEPA filters. Maintain a minimum pressure differential in the control area of minus 0.02 inch of water column relative to adjacent, unsealed areas. Provide continuous 24-hour per day monitoring of the pressure differential with a pressure differential automatic recording instrument. The building ventilation system must not be used as the local exhaust system for the asbestos control area. Filters on exhaust equipment must conform to ASSP Z9.2 and UL 586. Terminate the local exhaust system out of doors and remote from any public access or ventilation system intakes.

3.1.8 Tools

Vacuums must be leak proof to the filter and equipped with HEPA filters. Filters on vacuums must conform to ASSP Z9.2 and UL 586. Do not use power tools to remove asbestos containing materials unless the tool is equipped with effective, integral HEPA filtered exhaust ventilation systems. Remove all residual asbestos from reusable tools prior to storage or reuse. Reusable tools must be thoroughly decontaminated prior to being removed from the regulated areas.

3.1.9 Rental Equipment

If rental equipment is to be used, furnish written notification to the rental agency concerning the intended use of the equipment and the possibility of asbestos contamination of the equipment.

3.1.10 Single Stage Decontamination Area

A decontamination area (equipment room/area) must be provided for Class I work involving less than 25 feet or 10 square feet of TSI or surfacing ACM, and for Class II and Class III asbestos work operations where exposures exceed the PELs or where there is no negative exposure assessment. The equipment room or area must be adjacent to the regulated area for the decontamination of employees, material, and their equipment which could be contaminated with asbestos. The area must be covered by an impermeable drop cloth on the floor or horizontal working surface. The area must be of sufficient size to accommodate cleaning of equipment and removing personal protective equipment without spreading contamination beyond the area.

3.1.11 Decontamination Area Exit Procedures

Ensure that the following procedures are followed:

a. Before leaving the regulated area, remove all gross contamination and debris from work clothing using a HEPA vacuum.

b. Employees must remove their protective clothing in the equipment room and deposit the clothing in labeled impermeable bags or containers for disposal or laundering.

c. Employees must not remove their respirators until showering.

d. Employees must shower prior to entering the clean room. If a shower has not been located between the equipment room and the clean room or the work is performed outdoors, ensure that employees engaged in Class I asbestos jobs: a) Remove asbestos contamination from their work suits in the equipment room or decontamination area using a HEPA vacuum before proceeding to a shower that is not adjacent to the work area; or b) Remove their contaminated work suits in the equipment

room, without cleaning worksuits, and proceed to a shower that is not adjacent to the work area.

3.2 WORK PROCEDURE

Perform asbestos related work in accordance with 29 CFR 1926.1101, 40 CFR 61-SUBPART M, and as specified herein. Use wet or if given prior EPA approval, dry removal procedures and negative pressure enclosure techniques. Wear and utilize protective clothing and equipment as specified herein. No eating, smoking, drinking, chewing gum, tobacco, or applying cosmetics is permitted in the asbestos work or control areas. Personnel of other trades not engaged in the removal and demolition of asbestos containing material must not be exposed at any time to airborne concentrations of asbestos unless all the personnel protection and training provisions of this specification are complied with by the trade personnel. Seal all roof top penetrations, except plumbing vents, prior to asbestos roofing work. Shut down the building heating, ventilating, and air conditioning system, cap the openings to the system, and provide temporary heating, ventilation, and air conditioning prior to the commencement of asbestos work. Power to the regulated area must be locked-out and tagged in accordance with 29 CFR 1910.147. Disconnect electrical service when wet removal is performed and provide temporary electrical service with verifiable ground fault circuit interrupter (GFCI) protection prior to the use of any water. All electrical work must be performed by a licensed electrician. Stop abatement work in the regulated area immediately when the airborne total fiber concentration: (1) equals or exceeds 0.01 f/cc, or the pre-abatement concentration, whichever is greater, outside the regulated area; or (2) equals or exceeds 1.0 f/cc inside the regulated area. Correct the condition to the satisfaction of the Contracting Officer, including visual inspection and air sampling. Work must resume only upon notification by the Contracting Officer. Corrective actions must be documented. If an asbestos fiber release or spill occurs outside of the asbestos control area, stop work immediately, correct the condition to the satisfaction of the Contracting Officer including clearance sampling, prior to resumption of work.

3.2.1 Building Ventilation System and Critical Barriers

Building ventilation system supply and return air ducts in a regulated area must be isolated by airtight seals to prevent the spread of contamination throughout the system. The airtight seals must consist of 2 layers of polyethylene. Edges to wall, ceiling and floor surfaces must be sealed with industrial grade duct tape.

a. A Competent Person must supervise the work.

b. For indoor work, critical barriers must be placed over all openings to the regulated area.

c. Impermeable dropcloths must be placed on surfaces beneath all removal activity.

3.2.2 Protection of Existing Work to Remain

Perform work without damage or contamination of adjacent work. Where such work is damaged or contaminated as verified by the Contracting Officer using visual inspection or sample analysis, it must be restored to its original condition or decontaminated by the Contractor at no expense to the Government as deemed appropriate by the Contracting Officer. This

includes inadvertent spill of dirt, dust, or debris in which it is reasonable to conclude that asbestos may exist. When these spills occur, stop work immediately. Then clean up the spill. When satisfactory visual inspection and air sampling results are obtained from the PQP work may proceed at the discretion of the Contracting Officer.

3.2.3 Furnishings

Furniture and equipment will remain in the building. Cover and seal furnishings with 6-mil plastic sheet or remove from the work area and store in a location on site approved by the Contracting Officer.

3.2.4 Precleaning

Wet wipe and HEPA vacuum all surfaces potentially contaminated with asbestos prior to establishment of an enclosure.

3.2.5 Asbestos Control Area Requirements

3.2.5.1 Negative Pressure Enclosure

Removal of asbestos contaminated acoustical ceiling tiles, spray applied fireproofing, thermal system insulation, gypsum wallboard/joint compound require the use of a negative pressure enclosure. Block and seal openings in areas where release of airborne asbestos fibers can be expected. Establish an asbestos negative pressure enclosure with the use of curtains, portable partitions, or other enclosures in order to prevent the escape of asbestos fibers from the contaminated asbestos work area. Negative pressure enclosure development must include protective covering of uncontaminated walls, and ceilings with a continuous membrane of two layers of minimum 6-mil plastic sheet sealed with tape to prevent water or other damage. Provide two layers of 6-mil plastic sheet over floors and extend a minimum of 12 inches up walls. Seal all joints with tape. Provide local exhaust system in asbestos control area. Openings will be allowed in enclosures of asbestos control areas for personnel and equipment entry and exit, supply and exhaust of air for local exhaust system and the removal of properly containerized asbestos containing materials. Replace local exhaust system filters as required to maintain efficiency of the system.

3.2.5.2 Glovebag

If the construction of a negative pressure enclosure is infeasible for the removal of ACM. Use alternate techniques as indicated in 29 CFR 1926.1101. Establish designated limits for the asbestos regulated area with the use of rope or other continuous barriers and maintain all other requirements for asbestos control areas. The PQP must conduct personal samples of each worker engaged in asbestos handling (removal, disposal, transport and other associated work) throughout the duration of the project. If the quantity of airborne asbestos fibers monitored at the breathing zone of the workers at any time exceeds background or 0.01 fibers per cubic centimeter whichever is greater, stop work, evacuate personnel in adjacent areas or provide personnel with approved protective equipment at the discretion of the Contracting Officer. This sampling may be duplicated by the Government at the discretion of the Contracting Officer. If the air sampling results obtained by the Government differ from those obtained by the Contractor, the Government will determine which results predominate. If adjacent areas are contaminated as determined by the Contracting Officer, clean the contaminated areas, monitor, and visually inspect the

area as specified herein.

3.2.5.3 Regulated Area for Class II Removal

Removal of asbestos containing floor tile/mastic, carpet/mastic, and sealants are Class II removal activities. Establish designated limits for the asbestos regulated work area with the use of red barrier tape; install critical barriers, splash guards and signs, and maintain all other requirements for asbestos control area except local exhaust. Place impermeable dropcloths on surfaces beneath removal activity extending out 3 feet in all directions. A detached decontamination system may be used. Conduct area monitoring of airborne fibers during the work shift at the designated limits of the asbestos work area and conduct personal samples of each worker engaged in the work. If workers the airborne fiber concentration of the workers or designated limits at any time exceeds background or 0.01 fibers per cubic centimeter, whichever is greater, stop work immediately and correct the situation.

3.2.6 Removal Procedures

Wet asbestos material with a fine spray of amended water or a specific wetting agent such as light oil during removal, cutting, or other handling so as to reduce the emission of airborne fibers. Remove material and immediately place in 6 mil plastic disposal bags. Remove asbestos containing material in a gradual manner, with continuous application of the amended water or wetting agent in such a manner that no asbestos material is disturbed prior to being adequately wetted. Where unusual circumstances prohibit the use of 6 mil plastic bags, submit an alternate proposal for containment of asbestos fibers to the Contracting Officer for approval. For example, in the case where both piping and insulation are to be removed, the Contractor may elect to wet the insulation, wrap the pipes and insulation in plastic and remove the pipe by sections. Containerize asbestos containing material while wet. Do not allow asbestos material to accumulate or become dry. Lower and otherwise handle asbestos containing material as indicated in 40 CFR 61-SUBPART M.

3.2.6.1 Sealing Contaminated Items Designated for Disposal

Remove contaminated architectural, mechanical, and electrical appurtenances such as venetian blinds, full-height partitions, carpeting, duct work, pipes and fittings, radiators, light fixtures, conduit, panels, and other contaminated items designated for removal by completely coating the items with an asbestos lock-down encapsulant at the demolition site before removing the items from the asbestos control area. These items need not be vacuumed. The asbestos lock-down encapsulant must be tinted a contrasting color and spray-applied by airless method. Thoroughness of sealing operation must be visually gauged by the extent of colored coating on exposed surfaces. Lock-down encapsulants must comply with the performance requirements specified herein.

3.2.6.2 Exposed Pipe Insulation Edges

Contain edges of asbestos insulation to remain that are exposed by a removal operation. Wet and cut the rough ends true and square with sharp tools and then encapsulate the edges with a 1/4-inch-thick layer of non-asbestos containing insulating cement troweled to a smooth hard finish. When cement is dry, lag the end with a layer of non-asbestos lagging cloth, overlapping the existing ends by at least 4 inches. When insulating cement and cloth is an impractical method of sealing a raw edge

of asbestos, take appropriate steps to seal the raw edges as approved by the Contracting Officer.

3.2.7 Methods of Compliance

3.2.7.1 Mandated Practices

The specific abatement techniques and items identified must be detailed in the Contractor's AHAP. Use the following engineering controls and work practices in all operations, regardless of the levels of exposure:

a. Vacuum cleaners equipped with HEPA filters.

b. Wet methods or wetting agents except where it can be demonstrated that the use of wet methods is unfeasible due to the creation of electrical hazards, equipment malfunction, and in roofing.

c. Prompt clean-up and disposal.

d. Inspection and repair of polyethylene.

e. Cleaning of equipment and surfaces of containers prior to removing them from the equipment room or area.

3.2.7.2 Control Methods

Use the following control methods:

a. Local exhaust ventilation equipped with HEPA filter;

b. Enclosure or isolation of processes producing asbestos dust;

c. Where the feasible engineering and work practice controls are not sufficient to reduce employee exposure to or below the PELs, use them to reduce employee exposure to the lowest levels attainable and must supplement them by the use of respiratory protection.

3.2.7.3 Unacceptable Practices

The following work practices must not be used:

a. High-speed abrasive disc saws that are not equipped with point of cut ventilator or enclosures with HEPA filtered exhaust air.

b. Compressed air used to remove asbestos containing materials, unless the compressed air is used in conjunction with an enclosed ventilation system designed to capture the dust cloud created by the compressed air.

c. Dry sweeping, shoveling, or other dry clean up.

d. Employee rotation as a means of reducing employee exposure to asbestos.

3.2.8 Class I Work Procedures

In addition to requirements of paragraphs MANDATED PRACTICES and CONTROL METHODS, the following engineering controls and work practices must be used:

a. A Competent Person must supervise the installation and operation of the control methods.

b. For jobs involving the removal of more than 25 feet or 10 square feet of TSI or surfacing material, place critical barriers over all openings to the regulated area.

c. HVAC systems must be isolated in the regulated area by sealing with a double layer of plastic or air-tight rigid covers.

d. Impermeable dropcloths (6 mil or greater thickness) must be placed on surfaces beneath all removal activity.

e. Where a negative exposure assessment has not been provided or where exposure monitoring shows the PEL was exceeded, the regulated area must be ventilated with a HEPA unit and employees must use PPE.

3.2.9 Specific Control Methods for Class I Work

Use Class I work procedures, control methods and removal methods for the following ACM:

a. Spray Applied Fireproofing

b. Gypsum Wallboard and Joint Compound

c. Thermal System Insulation and Mudded Pipe Fittings

d. Plaster and Textured Ceilings and Walls

e. Vermiculite

3.2.9.1 Negative Pressure Enclosure (NPE) System

The system must provide at least four air changes per hour inside the containment. The local exhaust unit equipment must be operated 24-hours per day until the containment is removed. The NPE must be smoke tested for leaks at the beginning of each shift and be sufficient to maintain a minimum pressure differential of minus 0.02 inch of water column relative to adjacent, unsealed areas. Pressure differential must be monitored continuously, 24-hours per day, with an automatic manometric recording instrument and Records must be provided daily on the same day collected to the Contracting Officer. The Contracting Officer must be notified immediately if the pressure differential falls below the prescribed minimum. The building ventilation system must not be used as the local exhaust system for the regulated area. The NPE must terminate outdoors unless an alternate arrangement is allowed by the Contracting Officer. All filters used must be new at the beginning of the project and must be periodically changed as necessary and disposed of as ACM waste.

3.2.9.2 Glovebag Systems

Glovebags must be used without modification, smoke-tested for leaks, and completely cover the circumference of pipe or other structures where the work is to be done. Glovebags must be used only once and must not be moved. Glovebags must not be used on surfaces that have temperatures exceeding 150 degrees F. Prior to disposal, glovebags must be collapsed using a HEPA vacuum. Before beginning the operation, loose and friable material adjacent to the glovebag operation must be wrapped and sealed in

2 layers of plastic or otherwise rendered intact. At least two persons must perform glovebag removal. Asbestos regulated work areas must be established for glovebag abatement. Designated boundary limits for the asbestos work must be established with rope or other continuous barriers and all other requirements for asbestos control areas must be maintained, including area signage and boundary warning tape.

a. Attach HEPA vacuum systems to the bag to prevent collapse during removal of ACM.

b. The negative pressure glove boxes must be fitted with gloved apertures and a bagging outlet and constructed with rigid sides from metal or other material which can withstand the weight of the ACM and water used during removal. A negative pressure must be created in the system using a HEPA filtration system. The box must be smoke tested for leaks prior to each use.

3.2.9.3 Mini-Enclosure

Single bulkhead containment, double bulkhead containment or mini -containment (small walk-in enclosure) to accommodate no more than two persons, may be used if the disturbance or removal can be completely contained by the enclosure. The mini-enclosure must be inspected for leaks and smoke tested before each use. Air movement must be directed away from the employee's breathing zone within the mini-enclosure.

3.2.9.4 Wrap and Cut Operation

Prior to cutting pipe, the asbestos-containing insulation must be wrapped with polyethylene and securely sealed with duct tape to prevent asbestos becoming airborne as a result of the cutting process. The following steps must be taken: install glovebag, strip back sections to be cut 6 inches from point of cut, and cut pipe into manageable sections.

3.2.9.5 Class I Removal Method

Class I ACM must be removed using a control method described above. Prepare work area as previously specified. Establish designated limits for the asbestos regulated work area with the use of red barrier tape, critical barriers, signs, and maintain all other requirements for asbestos control area. Spread one layer of 6-mil seamless plastic sheeting on the floor below the work area. Remove asbestos containing spray applied fireproofing using a scraper and wet methods and immediately place into 6-mil thickness disposal bag. After removal of the material use a wire brush to clean the exposed substrate to remove residual material. Continue wet cleaning until surfaces are free of visible debris. Cut manageable sections of gypsum wallboard and joint compound and immediately place into a 6-mil minimum thickness disposal bag or other approved container. Make every effort to keep the material from falling to the floor of the work area. Use a wire brush and wet clean to remove residual material from studs. Continue wet cleaning until the surface is clean of visible material and encapsulate stud walls. Remove ACM thermal system insulation and mudded pipe fittings using mechanical means and wet methods and immediately place into 6-mil thickness disposal bag. Continue wet cleaning until surfaces are free of visible debris. Remove ACM plaster ceilings or walls using mechanical means and adequately wet methods and immediately place into 6-mil thickness disposal bag. Make every effort to keep the material from falling to the floor of the work area. Continue wet cleaning until surfaces are free of visible debris. Remove ACM

textured ceiling finish using a scraper and wet methods and immediately place into 6-mil thickness disposal bag. Floors are considered contaminated from fallen textured ceiling finish. Clean up debris on floor and dispose of carpet as asbestos contaminated material. After removal of the material use a wire brush to clean the exposed concrete or ceiling to remove residual material. Continue wet cleaning until surfaces are free of visible debris. Remove ACM vermiculite using mechanical means and adequately wet methods and immediately place into 6-mil thickness disposal bag. Make every effort to keep the material from falling to the floor of the work area. Continue wet cleaning until surfaces are free of visible debris. Bag all asbestos debris which has fallen to the floor as asbestos-containing debris. Place all debris in plastic disposal bags of 6-mil minimum thickness. Once the material is in the disposal bag, apply additional water as needed to achieve "adequately wet" conditions for NESHAP compliance. Place bagged asbestos waste under negative pressure with the use of a HEPA vacuum, goose neck and duck-tape to seal the bag, wash to remove any visible contamination and place into a second 6-mil minimum thickness disposal bag. Containerize asbestos containing waste while wet. Lower and otherwise handle asbestos containing materials as indicated in 40 CFR 61-SUBPART M. Conduct area monitoring of airborne fibers during the work shift at the designated limits of the asbestos work area and conduct personal samples of each worker engaged in the work. If the quantity of airborne asbestos fibers monitored at the breathing zone of the workers or the designated limits at any time exceeds background or 0.01 fibers per cubic centimeter, whichever is greater, stop work, and immediately correct the situation.

3.2.10 Class II Work Procedures

In addition to the requirements of paragraphs MANDATED PRACTICES and CONTROL METHODS, the following engineering controls and work practices must be used:

a. A Competent Person must supervise the work.

b. For indoor work, critical barriers must be placed over all openings to the regulated area.

c. Impermeable dropcloths must be placed on surfaces beneath all removal activity.

3.2.11 Specific Control Methods for Class II Work

3.2.11.1 Vinyl and Asphaltic Flooring Materials, Carpet, and Mastic

Establish designated limits for the asbestos regulated work area with the use of red barrier tape, critical barriers, signs, and maintain all other requirements for asbestos control area except local exhaust. A detached decontamination system may be used. When removing vinyl floor tile and mastic or carpet and mastic which contains ACM, use the following practices. Remove floor tile and mastic or carpet and mastic using adequately wet methods. Remove floor tiles or carpet and mastic intact (if possible). Do not sand flooring or its backing. Scrape residual adhesive and backing using wet methods. Mechanical chipping is prohibited unless performed in a negative pressure enclosure. Dry sweeping is prohibited. Use vacuums equipped with HEPA filter, disposable dust bag, and metal floor tool (no brush) to clean floors. Place debris into a 6-mil minimum thickness disposal bag or other approved container. Once the material is in the disposal bag, apply additional water as needed to

achieve "adequately wet" conditions for NESHAP compliance. Place bagged asbestos waste under negative pressure with the use of a HEPA vacuum, goose neck and duck-tape to seal the bag, wash to remove any visible contamination and place into a second 6-mil minimum thickness disposal bag. Containerize asbestos containing waste while wet. Lower and otherwise handle asbestos containing materials as indicated in 40 CFR 61-SUBPART M. Conduct area monitoring of airborne fibers during the work shift at the designated limits of the asbestos work area and conduct personal samples of each worker engaged in the work. If workers the airborne fiber concentration of the workers or designated limits at any time exceeds background or 0.01 fibers per cubic centimeter, whichever is greater, stop work immediately and correct the situation.

3.2.11.2 Sealants and Mastic

Establish designated limits for the asbestos regulated work area with the use of red barrier tape, critical barriers and signs, and maintain all other requirements for asbestos control area except local exhaust. Spread 6-mil plastic sheeting on ground around perimeter of the work area extending out in all directions. Using adequately wet methods, carefully remove ACM sealants and mastics using a scraper of knife blade. As it is removed place material into a disposal bag. Make every effort to keep asbestos material from falling to the ground or work area floor below. Dry sweeping is prohibited. Use vacuums equipped with HEPA filter and disposable dust bag. Place debris into a 6-mil minimum thickness disposal bag or other approved container. Once the material is in disposal bag, apply additional water as needed to achieve "adequately wet" conditions for NESHAP compliance. Place bagged asbestos waste under negative pressure with the use of a HEPA vacuum, goose neck and duck-tape to seal the bag, wash to remove any visible contamination and place into a second 6-mil minimum thickness disposal bag. Containerize asbestos containing waste while wet. Lower and otherwise handle asbestos containing materials as indicated in 40 CFR 61-SUBPART M. Conduct area monitoring of airborne fibers during the work shift at the designated limits of the asbestos work area and conduct personal samples of each worker engaged in the work. If airborne fiber concentration of the workers or at designated limits at any time exceeds background or 0.01 fibers per cubic centimeter, whichever is greater, stop work immediately and correct the situation.

3.2.11.3 Suspect Fire Doors

Establish designated limits for the asbestos regulated work area with the use of red barrier tape, critical barriers, signs, and maintain all other requirements for asbestos control area except local exhaust. A detached decontamination system may be used. Spread 6-mil plastic sheeting on the ground beneath the work area and around the perimeter of the work area extending out in all directions. Remove door intact from hinges and wrap with 6-mil plastic sheeting. Inspect the interior areas of the door to determine if ACM is present. If ACM is not present the door may be disposed of as general construction debris. If ACM is present place whole door in enclosed container for disposal. Conduct area monitoring of airborne fibers during the work shift at the designated limits of the asbestos work area and conduct personal samples of each worker engaged in the work. If the airborne fiber concentration of the workers or designated limits at any time exceeds background or 0.01 fibers per cubic centimeter, whichever is greater, stop work immediately and correct the situation.

3.2.11.4 Roofing Materials

Establish designated limits for the asbestos regulated work area with the use of red barrier tape, critical barriers, signs, and maintain all other requirements for asbestos control area except local exhaust. When removing roofing materials which contain ACM as described in 29 CFR 1926.1101(g)(8)(ii), use the following practices. Roofing material must be removed in an intact state. Wet methods must be used to remove roofing materials that are not intact, or that will be rendered not intact during removal, unless such wet methods are not feasible or will create safety hazards. When removing built-up roofs, with asbestos-containing roofing felts and an aggregate surface, using a power roof cutter, all dust resulting from the cutting operations must be collected by a HEPA dust collector, or must be HEPA vacuumed by vacuuming along the cut line. Asbestos-containing roofing material must not be dropped or thrown to the ground, but must be lowered to the ground via covered, dust-tight chute, crane, hoist or other method approved by the Contracting Officer. Any ACM that is not intact must be lowered to the ground as soon as practicable, but not later than the end of the work shift. While the material remains on the roof it must be kept wet or placed in an impermeable waste bag or wrapped in plastic sheeting. Intact ACM must be lowered to the ground as soon as practicable, but not later than the end of the work shift. Unwrapped material must be transferred to a closed receptacle. Critical barriers must be placed over roof level heating and ventilation air intakes. Conduct area monitoring of airborne fibers during the work shift at the designated limits of the asbestos work area and conduct personal samples of each worker engaged in the work. If the airborne fiber concentration of the workers or designated limits at any time exceeds background or 0.01 fibers per cubic centimeter, whichever is greater, stop work immediately and correct the situation.

3.2.11.5 Cementitious Siding and Shingles or Transite Panels

Establish designated limits for the asbestos regulated work area with the use of red barrier tape, critical barriers, signs, and maintain all other requirements for asbestos control area except local exhaust. When removing cementitious asbestos-containing siding, shingles or Transite panels use the following work practices. Intentionally cutting, abrading or breaking is prohibited. Each panel or shingle must be sprayed with amended water prior to removal. Nails must be cut with flat, sharp instruments. Unwrapped or unbagged panels or shingles must be immediately lowered to the ground via covered dust-tight chute, crane or hoist, or placed in an impervious waste bag or wrapped in plastic sheeting and lowered to the ground no later than the end of the work shift. Place debris into a 6-mil minimum thickness disposal bag or other approved container. Once the material is in the disposal bag, apply additional water as needed to achieve "adequately wet" conditions for NESHAP compliance. Place bagged asbestos waste under negative pressure with the use of a HEPA vacuum, goose neck and duck-tape to seal the bag, wash to remove any visible contamination and place into a second 6-mil minimum thickness disposal bag. Containerize asbestos containing waste while wet. Conduct area monitoring of airborne fibers during the work shift at the designated limits of the asbestos work area and conduct personal samples of each worker engaged in the work. If the airborne fiber concentration of the workers or designated limits at any time exceeds background or 0.01 fibers per cubic centimeter, whichever is greater, stop work immediately and correct the situation.

3.2.11.6 Gaskets

Establish designated limits for the asbestos regulated work area with the use of red barrier tape, critical barriers, signs, and maintain all other requirements for asbestos control area except local exhaust. Gaskets must be thoroughly wetted with amended water prior to removal and immediately placed in a disposal container. If a gasket is visibly deteriorated and unlikely to be removed intact, removal must be undertaken within a glovebag. Any scraping to remove residue must be performed wet. Place debris into a 6-mil minimum thickness disposal bag or other approved container. Once the material is in the disposal bag, apply additional water as needed to achieve "adequately wet" conditions for NESHAP compliance. Place bagged asbestos waste under negative pressure with the use of a HEPA vacuum, goose neck and duck-tape to seal the bag, wash to remove any visible contamination and place into a second 6-mil minimum thickness disposal bag. Containerize asbestos containing waste while wet. Conduct area monitoring of airborne fibers during the work shift at the designated limits of the asbestos work area and conduct personal samples of each worker engaged in the work. If the airborne fiber concentration of the workers or designated limits at any time exceeds background or 0.01 fibers per cubic centimeter, whichever is greater, stop work immediately and correct the situation.

3.2.12 Abatement of Asbestos Contaminated Soil

Establish designated limits for the asbestos regulated work area with the use of red barrier tape, critical barriers, signs, and maintain all other requirements for asbestos control area except local exhaust. Asbestos contaminated soil must be removed from areas to a minimum depth of 2 inches. Soil must be thoroughly dampened with amended water and then removed by manual shoveling into labeled containers. Place debris into a 6-mil minimum thickness disposal bag or other approved container. Once the material is in the disposal bag, apply additional water as needed to achieve "adequately wet" conditions for NESHAP compliance. Place bagged asbestos waste under negative pressure with the use of a HEPA vacuum, goose neck and duck-tape to seal the bag, wash to remove any visible contamination and place into a second 6-mil minimum thickness disposal bag. Containerize asbestos containing waste while wet. Conduct area monitoring of airborne fibers during the work shift at the designated limits of the asbestos work area and conduct personal samples of each worker engaged in the work. If the airborne fiber concentration of the workers or designated limits at any time exceeds background or 0.01 fibers per cubic centimeter, whichever is greater, stop work immediately and correct the situation.

3.2.13 Air Sampling

Perform sampling of airborne concentrations of asbestos fibers in accordance with 29 CFR 1926.1101, the Contractor's air monitoring plan and as specified herein. Sampling performed in accordance with 29 CFR 1926.1101 must be performed by the PQP. Sampling performed for environmental and quality control reasons must be performed by the PQP. Unless otherwise specified, use NIOSH Method 7400 for sampling and analysis. Monitoring may be duplicated by the Government at the discretion of the Contracting Officer. If the air sampling results obtained by the Government differ from those results obtained by the Contractor, the Government will determine which results predominate. Results of breathing zone samples must be posted at the job site and made available to the Contracting Officer. Submit all documentation regarding

initial exposure assessments, negative exposure assessments, and air-monitoring results.

3.2.13.1 Sampling Prior to Asbestos Work

Provide area air sampling and establish the baseline one day prior to the masking and sealing operations for each demolition or removal site. Establish the background by performing area sampling in similar but uncontaminated sites in the building.

3.2.13.2 Sampling During Asbestos Work

The PQP must provide personal and area sampling as indicated in 29 CFR 1926.1101 and governing environmental regulations. Breathing zone samples must be taken for at least 25 percent of the workers in each shift, or a minimum of two, whichever is greater. Air sample fiber counting must be completed and results provided within 24-hours (breathing zone samples), and 8 hours (environmental/clearance monitoring) after completion of a sampling period. In addition, provided the same type of work is being performed, provide area sampling at least once every work shift close to the work inside the enclosure, outside the clean room entrance to the enclosure, and at the exhaust opening of the local exhaust system. If sampling outside the enclosure shows airborne levels have exceeded background or 0.01 fibers per cubic centimeter, whichever is greater, stop all work, correct the condition(s) causing the increase, and notify the Contracting Officer immediately. Where alternate methods are used, perform personal and area air sampling at locations and frequencies that will accurately characterize the evolving airborne asbestos levels. The written results must be signed by testing laboratory analyst, testing laboratory principal and the Contractor's PQP. The air sampling results must be documented on a Contractor's daily air monitoring log.

3.2.13.3 Final Clearance Requirements, NIOSH PCM Method

For PCM sampling and analysis using NIOSH NMAM Method 7400, the fiber concentration inside the abated regulated area, for each airborne sample, must be less than 0.01 f/cc. The abatement inside the regulated area is considered complete when every PCM final clearance sample is below the clearance limit. If any sample result is greater than 0.01 total f/cc, the asbestos fiber concentration (asbestos f/cc) must be confirmed from that same filter using NIOSH NMAM Method 7402 (TEM) at Contractor's expense. If any confirmation sample result is greater than 0.01 asbestos f/cc, abatement is incomplete and cleaning must be repeated at the Contractor's expense. Upon completion of any required recleaning, resampling with results to meet the above clearance criteria must be done at the Contractor's expense.

3.2.13.4 Final Clearance Requirements, EPA TEM Method

For EPA TEM sampling and analysis, using the EPA Method specified in 40 CFR 763, abatement inside the regulated area is considered complete when the arithmetic mean asbestos concentration of the five inside samples is less than or equal to 70 structures per square millimeter (70 S/mm). When the arithmetic mean is greater than 70 S/mm, the three blank samples must be analyzed. If the three blank samples are greater than 70 S/mm, resampling must be done. If less than 70 S/mm, the five outside samples must be analyzed and a Z-test analysis performed. When the Z-test results are less than 1.65, the decontamination must be considered complete. If the Z-test results are more than 1.65, the abatement is incomplete and

cleaning must be repeated. Upon completion of any required recleaning, resampling with results to meet the above clearance criteria must be done at the Contractor's expense.

3.2.13.5 Sampling After Final Clean-Up (Clearance Sampling)

Provide area sampling of asbestos fibers using aggressive air sampling techniques as defined in the EPA 560/5-85-024 and establish an airborne asbestos concentration of less than 0.01 fiber per cubic centimeter after final clean-up but before removal of the enclosure or the asbestos work control area. After final cleanup and the asbestos control area is dry but prior to clearance sampling, the PQP and GC must perform a visual inspection in accordance with ASTM E1368 to ensure that the asbestos control and work area is free of any accumulations of dirt, dust, or debris. Prepare a written report signed and dated by the PQP documenting that the asbestos control area is free of dust, dirt, and debris and all waste has been removed. Collect regulated number of clearance samples. Use transmission electron microscopy (TEM) to analyze clearance samples and report the results in accordance with current NIOSH criteria. The asbestos fiber counts from these samples must be less than 0.01 fiber per cubic centimeter or be not greater than the background, whichever is greater. Should any of the final samples indicate a higher value take appropriate actions to re-clean the area and repeat the sampling and TEM analysis at the Contractor's expense.

3.2.13.6 Air Clearance Failure

If clearance sampling results fail to meet the final clearance requirements, pay all costs associated with the required recleaning, resampling, and analysis, until final clearance requirements are met.

3.2.14 Lock-Down

Prior to removal of plastic barriers and after pre-clearance clean-up of gross contamination, the PQP must conduct a visual inspection of all areas affected by the removal in accordance with ASTM E1368. Inspect for any visible fibers. Spray apply a post removal (lock-down) encapsulant to ceiling, walls, floors and other areas exposed in the removal area. The exposed area includes but is not limited to plastic barriers, furnishings and articles to be discarded as well as dirty change room, air locks for bag removal and decontamination chambers.

3.2.15 Site Inspection

While performing asbestos engineering control work, the Contractor must be subject to on-site inspection by the Contracting Officer who may be assisted by or represented by safety or industrial hygiene personnel. If the work is found to be in violation of this specification, the Contracting Officer or his representative will issue a stop work order to be in effect immediately and until the violation is resolved. All related costs including standby time required to resolve the violation must be at the Contractor's expense.

3.3 CLEAN-UP AND DISPOSAL

3.3.1 Housekeeping

Essential parts of asbestos dust control are housekeeping and clean-up procedures. Maintain surfaces of the asbestos control area free of

accumulations of asbestos fibers. Give meticulous attention to restricting the spread of dust and debris; keep waste from being distributed over the general area. Use HEPA filtered vacuum cleaners. DO NOT BLOW DOWN THE SPACE WITH COMPRESSED AIR. When asbestos removal is complete, all asbestos waste is removed from the work-site, and final clean-up is completed, the Contracting Officer will attest that the area is safe before the signs can be removed. After final clean-up and acceptable airborne concentrations are attained but before the HEPA unit is turned off and the enclosure removed, remove all pre-filters on the building HVAC system and provide new pre-filters. Dispose of filters as asbestos contaminated materials. Reestablish HVAC mechanical, and electrical systems in proper working order. The Contracting Officer will visually inspect all surfaces within the enclosure for residual material or accumulated dust or debris. The Contractor must re-clean all areas showing dust or residual materials. If re-cleaning is required, air sample and establish an acceptable asbestos airborne concentration after re-cleaning. The Contracting Officer must agree that the area is safe in writing before unrestricted entry will be permitted. The Government must have the option to perform monitoring to determine if the areas are safe before entry is permitted.

3.3.2 Title to Materials

All waste materials, except as specified otherwise, become the property of the Contractor and must be disposed of as specified in applicable local, State, and Federal regulations and herein.

3.3.3 Disposal of Asbestos

3.3.3.1 Procedure for Disposal

Coordinate all waste disposal manifests with the Contracting Officer. Collect asbestos waste, contaminated waste water filters, asbestos contaminated water, scrap, debris, bags, containers, equipment, and asbestos contaminated clothing which may produce airborne concentrations of asbestos fibers and place in sealed fiber-proof, waterproof, non-returnable containers (e.g. double plastic bags 6 mils thick, cartons, drums or cans). Wastes within the containers must be adequately wet in accordance with 40 CFR 61-SUBPART M. Affix a warning and Department of Transportation (DOT) label to each container including the bags or use at least 6 mils thick bags with the approved warnings and DOT labeling preprinted on the bag. Clearly indicate on outside of each container the name of waste generator and location at which the waste was generated. Prevent contamination of transport vehicle (especially if transport vehicle is a rented truck likely to be used in the future for non-asbestos purposes). These precautions include lining the vehicle cargo area with plastic sheeting (similar to work area enclosure) and thorough cleaning of the cargo area after transport and unloading of asbestos debris is complete. Dispose of waste asbestos material at an Environmental Protection Agency (EPA) or State-approved asbestos landfill off Government property. For temporary storage, store sealed impermeable bags in asbestos waste drums or skids. An area for interim storage of asbestos waste-containing drums or skids will be assigned by the Contracting Officer or their authorized representative. Comply with 40 CFR 61-SUBPART M, State, regional, and local standards for hauling and disposal. Sealed plastic bags may be dumped from drums into the burial site unless the bags have been broken or damaged. Damaged bags must remain in the drum and the entire contaminated drum must be buried. Uncontaminated drums may be recycled. Workers unloading sealed drums must

wear appropriate respirators and personal protective equipment when handling asbestos materials at disposal site.

3.3.3.2 Asbestos Disposal Quantity Report

Direct the PQP to record and report, to the Contracting Officer, the amount of asbestos containing material removed and released for disposal. Deliver the report for the previous day at the beginning of each day shift with amounts of material removed during the previous day reported in linear feet or square feet as described initially in this specification and in cubic feet for the amount of asbestos containing material released for disposal.

1.2 DEFINITIONS

1.2.1 Abatement

Measures defined in 40 CFR 745, Section 223, designed to permanently eliminate lead-based paint hazards.

1.2.2 Action Level

Employee exposure, without regard to use of respirators, to an airborne concentration of lead of 30 micrograms per cubic meter of air averaged over an 8-hour period; to an airborne concentration of cadmium of 2.5 micrograms per cubic meter of air averaged over an 8-hour period; to an airborne concentration of chromium (VI) of 2.5 micrograms per cubic meter of air averaged over an 8-hour period.

1.2.3 Area Sampling

Sampling of lead, cadmium, chromium concentrations within the lead,

cadmium, chromium control area and inside the physical boundaries which is representative of the airborne lead, cadmium, chromium concentrations but is not collected in the breathing zone of personnel (approximately 5 to 6 feet above the floor).

1.2.4 Cadmium Permissible Exposure Limit (PEL)

Five micrograms per cubic meter of air as an 8-hour time weighted average as determined by 29 CFR 1926.1127. If an employee is exposed for more than 8 hours in a work day, determine the PEL by the following formula:

PEL (micrograms/cubic meter of air) = 40/No. hrs worked per day

1.2.5 Certified Industrial Hygienist (CIH)

As used in this section refers to a person retained by the Contractor who is certified as an industrial hygienist and who is trained in the recognition and control of lead, cadmium and chromium hazards in accordance with current federal, State, and local regulations. CIH must be certified for comprehensive practice by the American Board of Industrial Hygiene. The Certified Industrial Hygienist must be independent of the Contractor and must have no employee or employer relationship which could constitute a conflict of interest.

1.2.6 Chromium Permissible Exposure Limit (PEL)

Five micrograms per cubic meter of air as an 8-hour time weighted average as determined by 29 CFR 1926.1126. If an employee is exposed for more than 8 hours in a work day, determine the PEL by the following formula:

PEL (micrograms/cubic meter of air) = 40/No. hrs worked per day

1.2.7 Competent Person (CP)

As used in this section, refers to a person employed by the Contractor who is trained in the recognition and control of lead, cadmium and chromium hazards in accordance with current federal, State, and local regulations and has the authority to take prompt corrective actions to control the lead, cadmium and chromium hazard. The Contractor may provide more than one CP as required to supervise and monitor the work. The CP must be a Certified Industrial Hygienist (CIH) certified by the American Board of Industrial Hygiene or a Certified Safety Professional (CSP) certified by the Board of Certified Safety Professionals or a licensed lead-based paint abatement Supervisor/Project Designer in the State of New Mexico.

1.2.8 Contaminated Room

Refers to a room for removal of contaminated personal protective equipment (PPE).

1.2.9 Decontamination Shower Facility

That facility that encompasses a clean clothing storage room, and a contaminated clothing storage and disposal rooms, with a shower facility in between.

1.2.10 Deleading

Activities conducted by a person who offers to eliminate lead-based paint

or lead-based paint hazards or paints containing cadmium/chromium or to plan such activities in commercial buildings, bridges or other structures.

1.2.11 Eight-Hour Time Weighted Average (TWA)

Airborne concentration of lead, cadmium, chromium to which an employee is exposed, averaged over an 8-hour workday as indicated in 29 CFR 1926.62, 29 CFR 1926.1126, 29 CFR 1926.1127.

1.2.12 High Efficiency Particulate Air (HEPA) Filter Equipment

HEPA filtered vacuuming equipment with a UL 586 filter system capable of collecting and retaining lead, cadmium, chromium-contaminated particulate. A high efficiency particulate filter demonstrates at least 99.97 percent efficiency against 0.3 micron or larger size particles.

1.2.13 Lead

Metallic lead, inorganic lead compounds, and organic lead soaps. Excludes other forms of organic lead compounds. The use of the term Lead in this section also refers to paints which contain detectable concentrations of Cadmium and Chromium. For the purposes of the section lead-based paint (LBP) and paint with lead (PWL) also contains cadmium and chromium.

1.2.14 Lead-Based Paint (LBP)

Paint or other surface coating that contains lead in excess of 1.0 milligrams per centimeter squared or 0.5 percent by weight.

1.2.15 Lead-Based Paint Activities

In the case of target housing or child occupied facilities, lead-based paint activities include; a lead-based paint inspection, a risk assessment, or abatement of lead-based paint hazards.

1.2.16 Lead-Based Paint Hazards

Paint-lead hazard, dust-lead hazard or soil-lead hazard as identified in 40 CFR 745, Section 65. Any condition that causes exposure to lead from lead-contaminated dust, lead-contaminated soil, lead-based paint that is deteriorated or present in accessible surfaces, friction surfaces, or impact surfaces that would result in adverse human health effects.

1.2.17 Lead, Cadmium, Chromium Control Area

A system of control methods to prevent the spread of lead, cadmium, chromium dust, paint chips or debris to adjacent areas that may include temporary containment, floor or ground cover protection, physical boundaries, and warning signs to prevent unauthorized entry of personnel. HEPA filtered local exhaust equipment may be used as engineering controls to further reduce personnel exposures or building/outdoor environmental contamination.

1.2.18 Lead Permissible Exposure Limit (PEL)

Fifty micrograms per cubic meter of air as an 8-hour time weighted average as determined by 29 CFR 1926.62. If an employee is exposed for more than 8-hours in a work day, determine the PEL by the following formula:

PEL (micrograms/cubic meter of air) = 400/No. hrs worked per day

1.2.19 Material Containing Lead/Paint with Lead (MCL/PWL)

Any material, including paint, which contains lead as determined by the testing laboratory using a valid test method. The requirements of this section does not apply if no detectable levels of lead are found using a quantitative method for analyzing paint or MCL using laboratory instruments with specified limits of detection (usually 0.01 percent). An X-Ray Fluorescence (XRF) instrument is not considered a valid test method.

1.2.20 Personal Sampling

Sampling of airborne lead, cadmium, chromium concentrations within the breathing zone of an employee to determine the 8-hour time weighted average concentration in accordance with 29 CFR 1926.62, 29 CFR 1926.1126, 29 CFR 1926.1127. Samples must be representative of the employees' work tasks. Breathing zone must be considered an area within a hemisphere, forward of the shoulders, with a radius of 6 to 9 inches and centered at the nose or mouth of an employee.

1.2.21 Physical Boundary

Area physically roped or partitioned off around lead, cadmium, chromium control area to limit unauthorized entry of personnel.

1.3 DESCRIPTION

Construction activities impacting PWL or material containing lead, which are covered by this specification, include the demolition or removal of material containing lead, cadmium, chromium in all condition. The work covered by this section includes work tasks and the precautions specified in this section for the protection of building occupants and the environment during and after the performance of the hazard abatement activities.

1.3.1 Protection of Existing Areas to Remain

Project work including, but not limited to, lead, cadmium, chromium hazard abatement work, storage, transportation, and disposal must be performed without damaging or contaminating adjacent work and areas. Where such work or areas are damaged or contaminated, restore work and areas to the original condition.

1.3.2 Coordination with Other Work

Coordinate with work being performed in adjacent areas to ensure there are no exposure issues. Explain coordination procedures in the Lead, Cadmium, Chromium Compliance Plan and describe how the Contractor will prevent lead, cadmium and chromium exposure to other contractors and Government personnel performing work unrelated to lead, cadmium and chromium activities.

1.3.3 Sampling and Analysis

Submit a log of the analytical results from sampling conducted during the abatement. Keep the log of results current with project activities and brief the results to the Contracting Officer as analytical results are reported.

1.3.3.1 Dust Wipe Materials, Sampling and Analysis

Sampling must conform to ASTM E1728.

1.3.3.2 Soil Sampling and Analysis

Sampling must conform to ASTM E1727.

1.4 SUBMITTALS

Government approval is required for submittals with a "G" designation; submittals not having a "G" designation are for Contractor Quality Control approval. Submit the following in accordance with Section 01 33 00 SUBMITTAL PROCEDURES:

SD-01 Preconstruction Submittals

Competent Person Qualifications; G

Training Certification; G

Medical Examinations; G

Lead, Cadmium, Chromium Waste Management Plan; G

Occupant Protection Plan; G

Lead, Cadmium, Chromium Compliance Plan; G

Written Evidence of TSD Approval; G

SD-03 Product Data

Respirators; G

Vacuum Filters; G

Negative Air Pressure System; G

Materials and Equipment; G

Expendable Supplies; G

Local Exhaust Equipment; G

Pressure Differential Automatic Recording Instrument; G

Pressure Differential Log; G

SD-06 Test Reports

Sampling and Analysis; G

Environmental Assessment Data Report; G

Sampling Results; G

Pressure Differential Recordings For Local Exhaust System; G

SD-07 Certificates

Testing Laboratory; G

SD-11 Closeout Submittals

Hazardous Waste Manifest; G

Turn-In Documents or Weight Tickets; G

1.5 QUALITY ASSURANCE

1.5.1 Qualifications

1.5.1.1 Competent Person (CP)

Submit name, address, and telephone number of the CP selected to perform responsibilities specified in paragraph COMPETENT PERSON (CP) RESPONSIBILITIES. Provide documented construction project-related experience with implementation of OSHA's Lead in Construction standard (29 CFR 1926.62), Chromium standard (29 CFR 1926.1126), Cadmium standard (29 CFR 1926.1127) which shows ability to assess occupational and environmental exposure to lead, cadmium, chromium; experience with the use of respirators, personal protective equipment and other exposure reduction methods to protect employee health. Demonstrate a minimum of 3 years' experience implementing OSHA's Lead in Construction standard (29 CFR 1926.62), Chromium standard (29 CFR 1926.1126), and Cadmium standard (29 CFR 1926.1127). Submit proper documentation that the CP is trained, licensed, and certified in accordance with federal, State of New Mexico, and local laws.

1.5.1.2 Training Certification

Submit a certificate for each worker and supervisor, signed and dated by the accredited training provider, stating that the employee has received the required lead, cadmium and chromium training specified in 29 CFR 1926.62, 29 CFR 1926.1126, 29 CFR 1926.1127, 40 CFR 745, and is certified to perform or supervise deleading, lead removal or demolition activities in the State of New Mexico.

1.5.1.3 Testing Laboratory

Submit the name, address, and telephone number of the testing laboratory selected to perform the air analysis, testing, and reporting of airborne concentrations of lead, cadmium and chromium. Use a laboratory participating in the EPA National Lead Laboratory Accreditation Program (NLLAP) by being accredited by either the American Association for Laboratory Accreditation (A2LA) or the American Industrial Hygiene Association (AIHA) and that is successfully participating in the Environmental Lead Proficiency Analytical Testing (ELPAT) program to perform sample analysis. Laboratories selected to perform blood lead analysis must be OSHA approved.

1.5.2 Requirements

1.5.2.1 Competent Person (CP) Responsibilities

a. Verify training meets all federal, State, and local requirements.

b. Review and approve Lead, Cadmium, Chromium Compliance Plan for conformance to the applicable referenced standards.

c. Continuously inspect LBP/PWL or MCL work for conformance with the approved plan.

d. Perform (or oversee performance of) air sampling. Recommend upgrades or downgrades (whichever is appropriate based on exposure) on the use of PPE (respirators included) and engineering controls.

e. Ensure work is performed in strict accordance with specifications at all times.

f. Control work to prevent hazardous exposure to human beings and to the environment at all times.

g. Supervise final cleaning of the lead, cadmium, chromium control area, take clearance wipe samples if necessary; review clearance sample results and make recommendations for further cleaning.

h. Certify the conditions of the work as called for elsewhere in this specification.

1.5.2.2 Lead, Cadmium, Chromium Compliance Plan

Submit a detailed job-specific plan of the work procedures to be used in the disturbance of lead, cadmium and chromium, LBP/PWL or MCL. Include a description of equipment and materials, work practices, controls and job responsibilities for each activity from which lead, cadmium, chromium is emitted. Include in the plan, eating, drinking, smoking, hygiene facilities and sanitary procedures, interface of trades, sequencing of lead, cadmium, chromium related work, collected waste water and dust containing lead, cadmium, chromium and debris, air sampling, respirators, personal protective equipment, and a detailed description of the method of containment of the operation to ensure that lead, cadmium, chromium is not released outside of the lead, cadmium, chromium control area. Include site preparation, cleanup and clearance procedures. Include occupational and environmental sampling, training and strategy, sampling and analysis strategy and methodology, frequency of sampling, duration of sampling, and qualifications of sampling personnel in the air sampling portion of the plan. Include a description of arrangements made among contractors on multi-contractor worksites to inform affected employees and to clarify responsibilities to control exposures.

1.5.2.3 Environmental Assessment Data Report

If initial monitoring is necessary, submit environmental sampling results to the Contracting Officer within three working days of collection, signed by the testing laboratory employee performing the analysis, the employee that performed the sampling, and the CP.

In order to reduce the full implementation of 29 CFR 1926.62, 29 CFR 1926.1126, 29 CFR 1926.1127 the Contractor must provide documentation. Submit a report that supports the determination to reduce full implementation of the requirements of 29 CFR 1926.62,29 CFR 1926.1126, 29 CFR 1926.1127 and supporting the Lead, Cadmium, Chromium Compliance Plan.

a. The initial monitoring must represent each job classification, or if working conditions are similar to previous jobs by the same employer, provide previously collected exposure data that can be used to estimate worker exposures per 29 CFR 1926.62,29 CFR 1926.1126, 29 CFR 1926.1127. The data must represent the worker's regular daily exposure to lead, cadmium, chromium for stated work.

b. Submit worker exposure data gathered during the task-based trigger operations of 29 CFR 1926.62, 29 CFR 1926.1126, 29 CFR 1926.1127 with a complete process description. This includes manual demolition, manual scraping, manual sanding, heat gun, power tool cleaning, rivet busting, cleanup of dry expendable abrasives, abrasive blast enclosure removal, abrasive blasting, welding, cutting and torch burning where lead, cadmium and chromium containing coatings are present.

c. The initial assessment must determine the requirement for further monitoring and the need to fully implement the control and protective requirements including the lead, cadmium, chromium compliance plan per 29 CFR 1926.62, 29 CFR 1926.1126, 29 CFR 1926.1127.

1.5.2.4 Medical Examinations

Submit pre-work blood lead levels and post-work blood lead levels for all workers performing lead, cadmium, chromium activities during the execution of the work. Initial medical surveillance as required by 29 CFR 1926.62, 29 CFR 1926.1126, 29 CFR 1926.1127 must be made available to all employees exposed to lead, cadmium, chromium at any time (one day) above the action level. Full medical surveillance must be made available to all employees on an annual basis who are or may be exposed to lead, cadmium and chromium in excess of the action level for more than 30 days a year or as required by 29 CFR 1926.62, 29 CFR 1926.1126, 29 CFR 1926.1127. Adequate records must show that employees meet the medical surveillance requirements of 29 CFR 1926.33, 29 CFR 1926.62, 29 CFR 1926.1126, 29 CFR 1926.1127 and 29 CFR 1926.103. Provide medical surveillance to all personnel exposed to lead, cadmium, chromium as indicated in 29 CFR 1926.62, 29 CFR 1926.1126, 29 CFR 1926.1127. Maintain complete and accurate medical records of employees for the duration of employment plus 30 years.

1.5.2.5 Training

Train each employee performing work that disturbs lead, cadmium, chromium, who performs LBP/MCL/PWL disposal, and air sampling operations prior to the time of initial job assignment and annually thereafter, in accordance with 29 CFR 1926.21, 29 CFR 1926.62, 29 CFR 1926.1126, 29 CFR 1926.1127, 40 CFR 745 and State of New Mexico and local regulations where appropriate.

1.5.2.6 Respiratory Protection Program

a. Provide each employee required to wear a respirator a respirator fit test at the time of initial fitting and at least annually thereafter as required by 29 CFR 1926.62, 29 CFR 1926.1126, 29 CFR 1926.1127.

b. Establish and implement a respiratory protection program as required by 29 CFR 1926.103, 29 CFR 1926.62, 29 CFR 1926.1126, 29 CFR 1926.1127 and 29 CFR 1926.55.

1.5.2.7 Hazard Communication Program

Establish and implement a Hazard Communication Program as required by

29 CFR 1926.59.

1.5.2.8 Lead, Cadmium, Chromium Waste Management

The Lead, Cadmium, Chromium Waste Management Plan must comply with applicable requirements of federal, State, and local hazardous waste regulations and address:

a. Identification and classification of wastes associated with the work.

b. Names and qualifications of each contractor that will be transporting, storing, treating, and disposing of the wastes. Include the facility location and operator and a 24-hour point of contact. Furnish two copies of State permits, manifests, and USEPA Identification numbers.

c. Names and qualifications (experience and training) of personnel who will be working on-site with hazardous wastes.

d. List of waste handling equipment to be used in performing the work, to include cleaning, volume reduction, and transport equipment.

e. Spill prevention, containment, and cleanup contingency measures including a health and safety plan to be implemented in accordance with 29 CFR 1926.65.

f. Work plan and schedule for waste containment, removal and disposal. Proper containment of the waste includes using acceptable waste containers (e.g., 55-gallon drums) as well as proper marking/labeling of the containers. Clean up and containerize wastes daily.

g. Include any process that may alter or treat waste rendering a hazardous waste nonhazardous.

h. Unit cost for hazardous waste disposal according to this plan.

1.5.2.9 Environmental, Safety and Health Compliance

In addition to the detailed requirements of this specification, comply with laws, ordinances, rules, and regulations of federal, State, and local authorities regarding lead, cadmium and chromium. Comply with the applicable requirements of the current issue of 29 CFR 1926.62, 29 CFR 1926.1126, 29 CFR 1926.1127, and EM 385-1-1. Submit matters regarding interpretation of standards to the Contracting Officer for resolution before starting work. Where specification requirements and the referenced documents vary, the most stringent requirements apply.

1.5.3 Pressure Differential Recordings for Local Exhaust System

Provide a local exhaust system that creates a negative pressure of at least 0.02 inch of water relative to the pressure external to the enclosure and operate it continuously, 24 hours a day, until the temporary enclosure of the lead, cadmium, chromium control area is removed. Submit pressure differential recordings for each work day to the PQP and GC for review and to the Contracting Officer within 24 hours from the end of each work day.

1.5.4 Occupant Protection Plan

The certified project designer must develop and implement an Occupant Protection Plan describing the measures and management procedures to be

taken during lead, cadmium and chromium hazard abatement activities to protect the building occupants/building facilities and the outside environment from exposure to any lead, cadmium and chromium contamination while lead, cadmium and chromium hazard abatement activities are performed.

1.5.5 Pre-Construction Conference

Along with the CP, meet with the Contracting Officer to discuss in detail the Lead, Cadmium, Chromium Waste Management Plan and the Lead, Cadmium, Chromium Compliance Plan, including procedures and precautions for the work.

1.6 EQUIPMENT

1.6.1 Respirators

Furnish appropriate respirators approved by the National Institute for Occupational Safety and Health (NIOSH), Department of Health and Human Services, for use in atmospheres containing lead, cadmium and chromium dust, fume and mist. Respirators must comply with the requirements of 29 CFR 1926.62, 29 CFR 1926.1126, 29 CFR 1926.1127.

1.6.2 Special Protective Clothing

Personnel exposed to lead, cadmium, chromium contaminated dust must wear proper disposable protective whole-body clothing, head covering, gloves, eye, and foot coverings as required by 29 CFR 1926.62, 29 CFR 1926.1126, 29 CFR 1926.1127. Furnish proper disposable plastic or rubber gloves to protect hands. Reduce the level of protection only after obtaining approval from the CP.

1.6.3 Rental Equipment Notification

If rental equipment is to be used during PWL or MCL handling and disposal, notify the rental agency in writing concerning the intended use of the equipment.

1.6.4 Vacuum Filters

UL 586 labeled HEPA filters.

1.6.5 Equipment for Government Personnel

Furnish the Contracting Officer with two complete sets of personal protective equipment (PPE) daily, as required herein, for entry into and inspection of the lead, cadmium and chromium removal work within the lead, cadmium and chromium controlled area. Personal protective equipment must include disposable whole body covering, including appropriate foot, head, eye, and hand protection. PPE remains the property of the Contractor. The Government will provide respiratory protection for the Contracting Officer.

1.6.6 Abrasive Removal Equipment

The use of powered machine for vibrating, sanding, grinding, or abrasive blasting is prohibited unless equipped with local exhaust ventilation systems equipped with high efficiency particulate air (HEPA) filters.

1.6.7 Negative Air Pressure System

1.6.7.1 Minimum Requirements

Do not proceed with work in the area until containment is set up and HEPA filtration systems are in place. The negative air pressure system must meet the requirements of ASSP Z9.2 including approved HEPA filters in accordance with UL 586. Negative air pressure equipment must be equipped with new HEPA filters, and be sufficient to maintain a minimum pressure differential of minus 0.02 inch of water column relative to adjacent, unsealed areas. Negative air pressure system minimum requirements are listed as follows:

a. The unit must be capable of delivering its rated volume of air with a clean first stage filter, an intermediate filter and a primary HEPA filter in place.

b. The HEPA filter must be certified as being capable of trapping and retaining mono-disperse particles as small as 0.3 micrometers at a minimum efficiency of 99.97 percent.

c. The unit must be capable of continuing to deliver no less than 70 percent of rated capacity when the HEPA filter is 70 percent full or measures 2.5 inches of water static pressure differential on a magnehelic gauge.

d. Equip the unit with a manometer-type negative pressure differential monitor with minor scale division of 0.02 inch of water and accuracy within plus or minus 1.0 percent. The manometer must be calibrated daily as recommended by the manufacturer.

e. Equip the unit with a means for the operator to easily interpret the readings in terms of the volumetric flow rate of air per minute moving through the machine at any given moment.

f. Equip the unit with an electronic mechanism that automatically shuts the machine off in the event of a filter breach or absence of a filter.

g. Equip the unit with an audible horn that sounds an alarm when the machine has shut itself off.

h. Equip the unit with an automatic safety mechanism that prevents a worker from improperly inserting the main HEPA filter.

1.6.7.2 Auxiliary Generator

Provide an auxiliary generator with capacity to power a minimum of 50 percent of the negative air machines at any time during the work. When power fails, the generator controls must automatically start the generator and switch the negative air pressure system machines to generator power. The generator must not present a carbon monoxide hazard to workers.

1.6.8 Vacuum Systems

Vacuum systems must be suitably sized for the project, and filters must be capable of trapping and retaining all mono-disperse particles as small as 0.3 micrometers (mean aerodynamic diameter) at a minimum efficiency of 99.97 percent. Properly dispose of used filters that are being replaced.

1.6.9 Heat Blower Guns

Heat blower guns must be flameless, electrical, paint-softener type with controls to limit temperature to 1,100 degrees F. Heat blower must be (grounded) 120 volts ac, and must be equipped with cone, fan, glass protector and spoon reflector nozzles.

1.7 PROJECT/SITE CONDITIONS

1.7.1 Protection of Existing Work to Remain

Perform work without damage or contamination of adjacent areas. Where existing work is damaged or contaminated, restore work to its original condition or better as determined by the Contracting Officer.

PART 2 PRODUCTS

2.1 MATERIALS AND EQUIPMENT

Keep materials and equipment needed to complete the project available and on the site. Submit a description of the materials and equipment required; including Safety Data Sheets (SDSs) for material brought onsite to perform the work.

2.1.1 Expendable Supplies

Submit a description of the expendable supplies required.

2.1.1.1 Polyethylene Bags

Disposable bags must be polyethylene plastic and be a minimum of 6 mils thick (4 mils thick if double bags are used) or any other thick plastic material shown to demonstrate at least equivalent performance; and capable of being made leak-tight. Leak-tight means that solids, liquids or dust cannot escape or spill out.

2.1.1.2 Polyethylene Leak-tight Wrapping

Wrapping used to wrap lead, cadmium, chromium contaminated debris must be polyethylene plastic that is a minimum of 6 mils thick or any other thick plastic material shown to demonstrate at least equivalent performance.

2.1.1.3 Polyethylene Sheeting

Sheeting must be polyethylene plastic with a minimum thickness of 6 mil, or any other thick plastic material shown to demonstrate at least equivalent performance; and be provided in the largest sheet size reasonably accommodated by the project to minimize the number of seams. Where the project location constitutes an out of the ordinary potential for fire, or where unusual fire hazards cannot be eliminated, provide flame-resistant polyethylene sheets which conform to the requirements of NFPA 701.

2.1.1.4 Tape and Adhesive Spray

Tape and adhesive must be capable of sealing joints between polyethylene sheets and for attachment of polyethylene sheets to adjacent surfaces. After dry application, tape or adhesive must retain adhesion when exposed to wet conditions, including amended water. Tape must be minimum 2 inches

wide, industrial strength.

2.1.1.5 Containers

When used, containers must be leak-tight and be labeled in accordance with EPA, DOT and OSHA standards.

2.1.1.6 Chemical Paint Strippers

Chemical paint strippers must not contain methylene chloride and be formulated to prevent stain, discoloration, or raising of the substrate materials.

2.1.1.7 Chemical Paint Stripper Neutralizer

Neutralizers for paint strippers must be compatible with the substrate and suitable for use with the chemical stripper that has been applied to the surface.

2.1.1.8 Detergents and Cleaners

Detergents or cleaning agents must not contain trisodium phosphate and have demonstrated effectiveness in lead, cadmium and chromium control work using cleaning techniques.

PART 3 EXECUTION

3.1 PREPARATION

3.1.1 Protection

3.1.1.1 Notification

a. Notify the Contracting Officer 20 days prior to the start of any lead, cadmium and chromium work.

3.1.1.2 Lead, Cadmium, Chromium Control Area

a. Physical Boundary - Provide physical boundaries around the lead, cadmium, chromium control area by roping off the area designated in the work plan or providing curtains, portable partitions or other enclosures to ensure that lead, cadmium and chromium will not escape outside of the lead, cadmium and chromium control area. Prohibit the general public from accessing the lead, cadmium, chromium control areas.

b. Warning Signs - Provide warning signs at approaches to lead, cadmium, chromium control areas. Locate signs at such a distance that personnel may read the sign and take the necessary precautions before entering the area. Signs must comply with the requirements of 29 CFR 1926.62.

3.1.1.3 Furnishings

Furniture and equipment will remain in the building. Protect and cover furnishings or remove furnishings from the work area and store in a location approved by the Contracting Officer.

3.1.1.4 Heating, Ventilating and Air Conditioning (HVAC) Systems

Shut down, lock out, and isolate HVAC systems that supply, exhaust, or pass through the lead, cadmium, chromium control areas. Seal intake and exhaust vents in the lead, cadmium, chromium control area with 6 mil plastic sheet and tape. Seal seams in HVAC components that pass through the lead, cadmium, chromium control area. Provide temporary HVAC system for areas in which HVAC has been shut down outside the lead, cadmium, chromium control area.

3.1.1.5 Local Exhaust System

Provide a local exhaust system in the lead, cadmium, chromium control area in accordance with ASSP Z9.2, 29 CFR 1926.62, 29 CFR 1926.1126 and 29 CFR 1926.1127 that will provide at least 4 air changes per hour inside of the negative pressure enclosure. Local exhaust equipment must be operated 24 hours per day, until the lead, cadmium, chromium control area is removed and must be leak proof to the filter and equipped with HEPA filters. Maintain a minimum pressure differential in the lead, cadmium, chromium control area of minus 0.02 inch of water column relative to adjacent, unsealed areas. Provide continuous 24-hour per day monitoring of the pressure differential with a pressure differential automatic recording instrument. The building ventilation system must not be used as the local exhaust system for the lead, cadmium, chromium control area. Filters on exhaust equipment must conform to ASSP Z9.2 and UL 586. Terminate the local exhaust system out of doors and remote from any public access or ventilation system intakes.

3.1.1.6 Negative Air Pressure System Containment

a. Operate the negative air pressure systems to provide at least 4 air changes per hour inside the containment. Operate the local exhaust unit equipment continuously until the containment is removed. Smoke test the negative air pressure system for leaks at the beginning of each shift. The certified supervisor is responsible to continuously monitor and keep a pressure differential log with an automatic manometric recording instrument. Notify the Contracting Officer immediately if the pressure differential falls below the prescribed minimum. Submit the continuously monitored pressure differential log, as specified. Do not use the building ventilation system as the local exhaust system. Terminate the local exhaust system out of doors unless the Contracting Officer allows an alternate arrangement. All filters must be new at the beginning of the project and be periodically changed as necessary to maintain specified pressure differential and disposed of as lead, cadmium and chromium contaminated waste.

b. Discontinuing Negative Air Pressure System. Operate the negative air pressure system continuously during abatement activities unless otherwise authorized by the Contracting Officer. At the completion of the project, units must be run until full cleanup has been completed. Dismantling of the negative air pressure systems must be as presented in the Lead, Cadmium, Chromium Compliance Plan. Seal the HEPA filter machine intakes with polyethylene to prevent environmental contamination.

3.1.1.7 Decontamination Shower Facility

Provide clean and contaminated change rooms and shower facilities in

accordance with this specification and 29 CFR 1926.62, 29 CFR 1926.1126, 29 CFR 1926.1127.

3.1.1.8 Eye Wash Station

Provide suitable facilities within the work area for quick drenching or flushing of the eyes where eyes may be exposed to injurious corrosive materials.

3.1.1.9 Mechanical Ventilation System

a. Use adequate ventilation to control personnel exposure to lead, cadmium and chromium in accordance with 29 CFR 1926.62, 29 CFR 1926.1126, 29 CFR 1926.1127. To the extent feasible, use local exhaust ventilation or other collection systems, approved by the CP. Evaluate and maintain local exhaust ventilation systems in accordance with 29 CFR 1926.62, 29 CFR 1926.1126, 29 CFR 1926.1127.

b. Vent local exhaust outside the building and away from building ventilation intakes or ensure system is connected to HEPA filters.

c. Use locally exhausted, power actuated tools or manual hand tools.

3.1.1.10 Personnel Protection

Personnel must wear and use protective clothing and equipment as specified herein. Eating, smoking, or drinking or application of cosmetics is not permitted in the lead, cadmium, chromium control area. No one will be permitted in the lead, cadmium, chromium control area unless they have been appropriately trained and provided with protective equipment.

3.2 ERECTION

3.2.1 Lead, Cadmium, Chromium Control Area Requirements

Establish a lead, cadmium, chromium control area by completely establishing barriers and physical boundaries around the area or structure where PWL or MCL removal operations will be performed.

Full containment - Contain removal operations by the use of a negative pressure enclosure system with decontamination facilities and with HEPA filtered exhaust if required by the CP. For containment areas larger than 1,000 square feet install a minimum of two 18-inch square viewing ports. Locate ports to provide a view of the required work from the exterior of the enclosed contaminated area. Glaze ports with laminated safety glass.

3.3 APPLICATION

3.3.1 Lead, Cadmium, Chromium Work

Perform lead, cadmium, chromium work in accordance with approved Lead, Cadmium, Chromium Compliance Plan. Use procedures and equipment required to limit occupational exposure and environmental contamination with lead, cadmium, chromium when the work is performed in accordance with 29 CFR 1926.62, 29 CFR 1926.1126, 29 CFR 1926.1127, and as specified herein. Dispose of all PWL or MCL and associated waste in compliance with federal, State, and local requirements.

3.3.2 Paint with Lead, Cadmium, Chromium or Material Containing Lead, Cadmium, Chromium Removal

Provide methodology for removing lead in the Lead, Cadmium, Chromium Compliance Plan. Select lead, cadmium, and chromium removal processes to minimize contamination of work areas outside the control area with lead, cadmium, chromium contaminated dust or other lead, cadmium, chromium contaminated debris or waste and to ensure that unprotected personnel are not exposed to hazardous concentrations of lead, cadmium, chromium. Describe this removal process in the Lead, Cadmium, Chromium Compliance Plan.

Provide methodology for lead, cadmium, chromium, LBP/PWL removal or abatement/control and processes to minimize contamination of work areas outside the control area with lead, cadmium, chromium contaminated dust or other lead, cadmium, chromium contaminated debris/waste and to ensure that unprotected personnel are not exposed to hazardous concentrations of lead, cadmium, chromium. Describe this lead,, cadmium and chromium, LBP/PWL removal/control process in the Lead, Cadmium, Chromium Compliance Plan.

3.3.2.1 Paint with Lead, Cadmium, Chromium or Material Containing Lead, Cadmium, Chromium - Indoor Removal

Perform manual or mechanical removal and thermal cutting in the lead, cadmium, chromium control areas using enclosures, barriers or containments. Collect residue and debris for disposal in accordance with federal, State, and local requirements.

3.3.2.2 Paint with Lead, Cadmium, Chromium or Material Containing Lead, Cadmium, Chromium - Outdoor Removal

Perform outdoor removal as indicated in federal, State, and local regulations and in the Lead, Cadmium, Chromium Compliance Plan. The worksite preparation (barriers or containments) must be job dependent and presented in the Lead, Cadmium, Chromium Compliance Plan.

3.3.3 Personnel Exiting Procedures

Whenever personnel exit the lead, cadmium, chromium controlled area, they must perform the following procedures and must not leave the work place wearing any clothing or equipment worn in the control area:

a. Vacuum all clothing before entering the contaminated change room.

b. Remove protective clothing in the contaminated change room and place them in an approved impermeable disposal bag.

c. Wash hands and face at the site, don appropriate disposable or uncontaminated reusable clothing, move to an appropriate shower facility, shower.

d. Change to clean clothes prior to leaving the clean clothes storage area.

3.4 FIELD QUALITY CONTROL

3.4.1 Tests

3.4.1.1 Air and Wipe Sampling

Conduct sampling for lead, cadmium, chromium in accordance with 29 CFR 1926.62, 29 CFR 1926.1126, 29 CFR 1926.1127 and as specified herein. Air and wipe sampling must be directed or performed by the CP.

a. The CP must be on the job site directing the air and wipe sampling and inspecting the PWL or MCL removal work to ensure that the requirements of the contract have been satisfied during the entire PWL or MCL operation.

b. Collect personal air samples on employees who are anticipated to have the greatest risk of exposure as determined by the CP. In addition, collect air samples on at least twenty-five percent of the work crew or a minimum of two employees, whichever is greater, during each work shift.

c. Submit results of air samples, signed by the CP, within 72-hours after the air samples are taken.

d. Conduct area air sampling daily, on each shift in which lead, cadmium and chromium and lead-based paint removal operations are performed, in areas immediately adjacent to the lead, cadmium and chromium control area. Conduct sufficient area monitoring to ensure unprotected personnel are not exposed at or above 30 micrograms of lead per cubic meter of air or 2.5 micrograms of cadmium/chromium per cubic meter of air. If 30 micrograms of lead per cubic meter of air or 2.5 micrograms of cadmium/chromium per cubic meter of air is reached or exceeded, stop work, correct the conditions(s) causing the increased levels. Notify the Contracting Officer immediately. Determine if condition(s) require any further change in work methods. Resume removal work only after the CP and the Contracting Officer give approval.

3.5 CLEANING AND DISPOSAL

3.5.1 Cleanup

Maintain surfaces of the lead, cadmium, chromium control area free of accumulations of dust and debris. Restrict the spread of dust and debris; keep waste from being distributed over the work area. Do not dry sweep or use pressurized air to clean up the area. At the end of each shift and when the lead, cadmium, chromium operation has been completed, clean the controlled area of all visible contamination by vacuuming with a HEPA filtered vacuum cleaner, wet mopping the area and wet wiping the area as indicated by the Lead, Cadmium, Chromium Compliance Plan. Reclean areas showing dust or debris. After visible dust and debris is removed, wet wipe and HEPA vacuum all surfaces in the controlled area. If adjacent areas become contaminated at any time during the work, clean, visually inspect, and then wipe sample all contaminated areas. The CP must then certify in writing that the area has been cleaned of lead, cadmium and chromium contamination before clearance testing.

3.5.1.1 Clearance Certification

The CP must certify in writing that air samples collected outside the lead, cadmium, chromium control area during paint removal operations are less than 30 micrograms of lead per cubic meter of air and less than 2.5 micrograms of cadmium/chromium per cubic meter of air; the respiratory protection used for the employees was adequate; the work procedures were performed in accordance with 29 CFR 1926.62, 29 CFR 1926.1126, 29 CFR 1926.1127; and that there were no visible accumulations of material and dust containing lead, cadmium, chromium left in the work site. Do not remove the lead, cadmium, chromium control area or roped off boundary and warning signs prior to the Contracting Officer's acknowledgement of receipt of the CP certification.

Clear the lead, cadmium, chromium control area in industrial facilities of all visible dust and debris.

For lead, cadmium and chromium-based paint hazard abatement work, surface wipe and soil sampling must be conducted and clearance determinations made according to the work practice standards presented in 40 CFR 745.227.

3.5.2 Disposal

a. Dispose of material, whether hazardous or nonhazardous in accordance with all laws and provisions and all federal, State or local regulations. Ensure all waste is properly characterized. The result of each waste characterization (TCLP for RCRA materials) will dictate disposal requirements.

b. Contractor is responsible for segregation of waste. Collect lead, cadmium, chromium contaminated waste, scrap, debris, bags, containers, equipment, and lead, cadmium, chromium contaminated clothing that may produce airborne concentrations of lead, cadmium, chromium particles. Label the containers in accordance with 29 CFR 1926.62, 29 CFR 1926.1126, 29 CFR 1926.1127 and 40 CFR 261, 40 CFR 262 and corresponding state regulations.

c. Dispose of lead, cadmium, chromium contaminated material classified as hazardous waste at an EPA or State approved hazardous waste treatment, storage, or disposal facility off Government property.

d. Accumulate waste materials in U.S. Department of Transportation (49 CFR 178) approved 55-gallon drums or appropriately sized container for smaller volumes. Properly label each drum to identify the type of hazardous material (49 CFR 172). For hazardous waste, the collection container requires marking/labeling in accordance with 40 CFR 262 and corresponding state regulations during the accumulation/collection timeframe. The Contracting Officer or an authorized representative will assign an area for accumulation of waste containers. Coordinate authorized accumulation volumes and time limits with the host installation environmental function.

e. Handle, store, transport, and dispose lead, cadmium, chromium or lead, cadmium, chromium contaminated waste in accordance with 40 CFR 260, 40 CFR 261, 40 CFR 262, 40 CFR 263, 40 CFR 264, and 40 CFR 265. Comply with land disposal restriction notification requirements as required by 40 CFR 268.

f. All lead, cadmium, and chromium waste generation, management, and

disposal will be coordinated with the host installation environmental function.

3.5.2.1 Disposal Documentation

Coordinate all disposal or offsite shipments of lead, cadmium, and chromium waste with the host installation environmental function. Submit written evidence of TSD approval to demonstrate the hazardous waste treatment, storage, or disposal facility (TSD) is approved for lead, cadmium, chromium disposal by the EPA, State or local regulatory agencies. Submit one copy of the completed hazardous waste manifest, signed and dated by the initial transporter in accordance with 40 CFR 262. Provide a certificate that the waste was accepted by the disposal facility. Provide turn-in documents or weight tickets for nonhazardous waste disposal.

3.5.2.2 Payment for Hazardous Waste

Payment for disposal of hazardous and nonhazardous waste will not be made until a signed copy of the manifest from the treatment or disposal facility is received and approved by the Contracting Officer. The manifest must detail and certify the amount of lead, cadmium, chromium containing materials or nonhazardous waste delivered to the treatment or disposal facility.

Spec Section 01 00 00 General Requirements																					
		1.5A	Security Plan:	NA	NA																
		1.5A.1	The security plan defines both physical and administrative security procedures that will remain effective for the entire duration of the project.	NA	GOV																
		1.5A.2	The General Contractor is responsible for assuring that all sub-contractors working on the project and their employees also comply with these regulations.	NA	GOV																
		1.5C	Key Control:	NA	NA																
		1.5C.1	For any door controlling entrance to the construction area(s), the VA will supply to the contractor a door lock and/or its corresponding key, the contractor will provide all remaining door hardware to support the ABQ VA keying system. Upon project completion, the General Contractor must return the lock and key to the COR.	NA	GOV																
		1.5D	Document Control:	NA	NA																
		1.5D.1	Before starting any work, the General Contractor/Sub Contractors shall submit an electronic security memorandum describing the approach to following goals and maintaining confidentiality of “sensitive information”.	NA	GOV																
		1.5D.2	The General Contractor is responsible for safekeeping of all drawings, project manual and other project information. This information shall be shared only with those with a specific need to accomplish the project.	NA	GOV																
		1.5D.3	Certain documents, sketches, videos or photographs and drawings may be marked “Law Enforcement Sensitive” or “Sensitive Unclassified”. Secure such information in separate containers and limit the access to only those who will need it for the project. Return the information to the Contracting Officer upon request.	NA	GOV																
		1.5D.4	These security documents shall not be removed or transmitted from the project site without the written approval of Contracting Officer.	NA	GOV																
		1.5D.5	All paper waste or electronic media such as CD’s and diskettes shall be shredded and destroyed in a manner acceptable to the VA.	NA	GOV																
		1.5D.6	Notify Contracting Officer and Site Security Officer immediately when there is a loss or compromise of “sensitive information”.	NA	GOV																
		1.5D.7	All electronic information shall be stored in specified location following VA standards and procedures using an Engineering Document Management Software (EDMS).	NA	GOV																
		1.5D.7a	Security, access and maintenance of all project drawings, both scanned and electronic shall be performed and tracked through the EDMS system.	NA	GOV																
		1.5D.7b	“Sensitive information” including drawings and other documents may be attached to e-mail provided all VA encryption procedures are followed.	NA	GOV																
		1.13	Warranty Management	NA	NA

		1.13A	Warranty Management Plan: (1) Develop a warranty management plan which contains information relevant to FAR 52.246-21 Warranty of Construction at least 30 days before the planned pre-warranty conference, submit one set of the warranty management plan to the COR. (2) Include within the warranty management plan all required actions and documents to assure that the Government receives all warranties to which it is entitled. (3) The plan must be in narrative form and contain sufficient detail to render it suitable for use by future maintenance and repair personnel, whether tradesman, or of engineering background, not necessarily familiar with this contract. (4) The term "status" as indicated below must include due date and whether item has been submitted or was approved. (5) Warranty information made available during the construction phase must be submitted to the Contracting Officer for approval prior to each monthly invoice for payment. (6) Assemble approved information in a binder and turn over to the Government upon acceptance of the work. (7) The construction warranty period will begin on the date of the project acceptance and continue for the product warranty period. A joint 4 month and 9 month warranty inspection will be conducted, measured from time of acceptance, by the Contactor and the Contracting Officer. (8) Include in the warranty management plan, but not limited to, the following:	NA	GOV															
		1.13A.1	Roles and responsibilities of all personnel associated with the warranty process, including points of contact and telephone numbers within the company of the Contractor, subcontractors, manufacturers or suppliers involved.	NA	GOV															
		1.13A.2	Furnish with each warranty the name, address and telephone number of each of the guarantor's representatives nearest project location.	NA	GOV															
		1.13A.3	Listing and status of delivery of all Certificates of Warranty for extended warranty items, to include roofs, HVAC balancing, pumps, motors, transformers and for all commissioned systems such as fire protection and alarm systems, sprinkler systems and lightning protection systems, etc.	NA	GOV															
		1.13A.4	A list for each warranted equipment item, feature of construction or system indicating:	NA	GOV															
		1.13A.4a	Name of item.	NA	GOV															
		1.13A.4b	Model and serial numbers.	NA	GOV															
		1.13A.4c	Location where installed.	NA	GOV															
		1.13A.4d	Name and phone numbers of manufacturers and suppliers	NA	GOV															
		1.13A.4e	Name and phone numbers of manufacturers or suppliers	NA	GOV															
		1.13A.4f	Names, addresses and phone numbers of sources of spare parts	NA	GOV															
		1.13A.4g	Warranties and terms of warranty. Include one-year overall warranty of construction, including the starting date of warranty of construction. Items which have extended warranties must be indicated with separate warranty expiration dates.	NA	GOV															
		1.13A.4h	Starting point and duration of warranty period.	NA	GOV															
		1.13A.4i	Summary of maintenance procedures required to continue the warranty in force.	NA	GOV

Spec Section 01 91 00 General Commissioning Requirements				**GOV**																	
		1.13A	Preliminary Commissioning Plan Submittal: The Commissioning Agent has prepared a Preliminary Commissioning Plan based on the final Construction Documents. The Preliminary Commissioning Plan is included as an Appendix to this specification section. The Preliminary Commissioning Plan is provided for information only. It contains preliminary information about the following commissioning activities:	NA	GOV																
		1.13A.1	The Commissioning Team: A list of commissioning team members by organization.	NA	GOV																
		1.13A.2	Systems to be commissioned. A detailed list of systems to be commissioned for the project. This list also provides preliminary information on systems/equipment submittals to be reviewed by the Commissioning Agent; preliminary information on Pre-Functional Checklists that are to be completed; preliminary information on Systems Performance Testing, including information on testing sample size (where authorized by the VA).	NA	GOV																
		1.13A.3	Commissioning Team Roles and Responsibilities: Preliminary roles and responsibilities for each Commissioning Team member.	NA	GOV

		1.13A.4	Commissioning Documents: A preliminary list of commissioning-related documents, include identification of the parties responsible for preparation, review, approval, and action on each document.	NA	GOV																
		1.13A.5	Commissioning Activities Schedule: Identification of Commissioning Activities, including Systems Functional Testing, the expected duration and predecessors for the activity.	NA	GOV																
		1.13A.6	Pre-Functional Checklists: Preliminary Pre- Functional Checklists for equipment, components, subsystems, and systems to be commissioned. These Preliminary Pre- Functional Checklists provide guidance on the level of detailed information the Contractor shall include on the final submission.	NA	GOV																
		1.13A.7	Systems Functional Performance Test Procedures: Preliminary step-by-step System Functional Performance Test Procedures to be used during Systems Functional Performance Testing. These Preliminary Systems Functional Performance procedures provide information on the level of testing rigor, and the level of Contractor support required during performance of system's testing.	NA	GOV																
		1.13B	Final Commissioning Plan Submittal: Based on the Final Construction Documents and the Contractor's project team, the Commissioning Agent will prepare the Final Commissioning Plan as described in this section. The Commissioning Agent will submit three hard copies and three sets of electronic files of Final Commissioning Plan. The Contractor shall review the Commissioning Plan and provide any comments to the VA. The Commissioning Agent will incorporate review comments into the Final Commissioning Plan as directed by the VA.	NA	GOV																
		1.13C	Systems Functional Performance Test Procedure: The Commissioning Agent will submit preliminary Systems Functional Performance Test Procedures to the Contractor, and the VA for review and comment. The Contractor shall return review comments to the VA and the Commissioning Agent. The VA will also return review comments to the Commissioning Agent. The Commissioning Agent will incorporate review comments into the Final Systems Functional Test Procedures to be used in Systems Functional Performance Testing.	NA	GOV																
		1.13D	Pre-Functional Checklists: The Commissioning Agent will submit Pre-Functional Checklists to be completed by the Contractor.	NA	GOV																
		1.13E	Test and Inspection Reports: The Commissioning Agent will submit test and inspection reports to the VA with copies to the Contractor and the Architect/Engineer.	NA	GOV																
		1.13F	Corrective Action Documents: The Commissioning Agent will submit corrective action documents to the VA COR with copies to the Contractor and Architect.	NA	GOV																
		1.13G	Preliminary Commissioning Report Submittal: The Commissioning Agent will submit three electronic copies of the preliminary commissioning report. One electronic copy, with review comments, will be returned to the Commissioning Agent for preparation of the final submittal.	NA	GOV

Spec Section 02 82 13.13			**Glovebag Asbestos Abatement**																	
		2.5.1	Submit to the VA a minimum of 14 days prior to the pre-start meeting the following for review and approval. Meeting this requirement is a prerequisite for the pre-start meeting for this project:	A	GOV															
		2.5.1A	Submit a detailed work schedule for the entire project reflecting contract documents and the phasing/schedule requirements from the CPM chart.	A	GOV															
		2.5.1B	Submit a staff organization chart showing all personnel who shall be working on the project and their capacity/function. Provide their qualifications, training, accreditations, and licenses, as appropriate. Provide a copy of the "Certificate of Worker's Acknowledgment" and the "Affidavit of Medical Surveillance and Respiratory Protection" for each person.	A	GOV															
		2.5.1C	Submit Asbestos Hazard Abatement Plan developed specifically for this project, incorporating the requirements of the specifications, prepared, signed and dated by the CPIH/CIH.	A	GOV															
		2.5.1D	Submit the specifics of the materials and equipment to be used for this project with manufacturer names, model numbers, performance characteristics, pictures/diagrams, and number available for the following:	A	GOV															
		2.5.1D.1	Supplied air system, negative air machines, HEPA vacuums, air monitoring pumps, calibration devices, pressure differential monitoring device and emergency power generating system.	A	GOV															
		2.5.1D.2	Waste water filtration system, shower system, containment barriers.	A	GOV															
		2.5.1D.3	Encapsulants, surfactants, hand held sprayers, airless sprayers, glovebags, and fire extinguishers.	A	GOV															
		2.5.1D.4	Respirators, protective clothing, personal protective equipment.	A	GOV															
		2.5.1D.5	Fire safety equipment to be used in the regulated area.	A	GOV															
		2.5.1E	Submit the name, location, and phone number of the approved landfill; proof/verification the landfill is approved for ACM disposal; the landfill's requirements for ACM waste; the type of vehicle to be used for transportation; and name, address, and phone number of subcontractor, if used. Proof of asbestos training for transportation personnel shall be provided.	A	GOV

		1.4A	Submit as one package in accordance with Section 01 33 23, SHOP DRAWINGS, PRODUCT DATA, AND SAMPLES. Prepare detailed working drawings that are signed by a NICET Level III or Level IV Sprinkler Technician or stamped by a Registered Professional Engineer licensed in the field of Fire Protection Engineering. As the Government review is for technical adequacy only, the installer remains responsible for correcting any conflicts with other trades and building construction that arise during installation. Partial submittals will not be accepted. Material submittals shall be approved prior to the purchase or delivery to the job site. Suitably bind submittals in notebooks or binders and provide an index referencing the appropriate specification section. In addition to the hard copies, provide submittal items in Paragraphs 1.4(A) 1 through 1.4(A) 5 electronically in pdf format on a compact disc or as directed by the COR. Submittals shall include the following:	NA	NA														
		1.4A.1	Qualifications:	NA	NA														
		1.4A.1a	Provide a copy of the installing contractors fire sprinkler and state contractor's license.	A	GOV														
		1.4A.1b	Provide a copy of the NICET certification for the NICET Level III or Level IV Sprinkler Technician who prepared and signed the detailed working drawings unless the drawings are stamped by a Registered Professional Engineer licensed in the field of Fire Protection Engineering.	A	GOV														
		1.4A.1c	Provide documentation showing that the installer has been actively and successfully engaged in the installation of commercial automatic sprinkler systems for the past ten years.	A	GOV														
		1.4A.2	Drawings: Submit detailed 1:100 (1/8 inch) scale (minimum) working drawings conforming to the Plans and Calculations chapter of NFPA 13. Drawings shall include graphical scales that allow the user to determine lengths when the drawings are reduced in size. Include a plan showing the piping to the water supply test location.	A	GOV														
		1.4A.3	Manufacturer's Data Sheets: Provide data sheets for all materials and equipment proposed for use on the system. Include listing information and installation instructions in data sheets. Where data sheets describe items in addition to those proposed to be used for the system, clearly identify the proposed items on the sheet.	A	GOV														
		1.4A.4	Calculation Sheets:	A	GOV														
		1.4A.4a	Submit hydraulic calculation sheets in tabular form conforming to the requirements and recommendations of the Plans and Calculations chapter of NFPA 13.	A	GOV														
		1.4A.4b	Submit calculations of loads for sizing of sway bracing in accordance with NFPA 13.	A	GOV

Activity #	Transmittal #	Paragraph #	Description	A - A/E	GOV - VA / USACE	Submit	Approval Needed By	Material Needed By	Action Code	Date of Action	Date Forwarded to Approver / Authorized – Date Received from Contractor	A - A/E	GOV - VA / USACE	Date Approved by A/E Action Code	Date Approved by VA Action Code	Date Approved by USACE Action Code	Action Code				
		1.4D	Contractor shall make all necessary field measurements and investigations to assure that the equipment and assemblies will meet contract requirements, and all equipment that requires regular maintenance, calibration, etc are accessable from the floor or permanent work platform. It is the Contractor's responsibility to ensure all submittals meet the VA specifications and requirements and it is assumed by the VA that all submittals do meet the VA specifications unless the Contractor has requested a variance in writing and approved by COR prior to the submittal. If at any time during the project it is found that any item does not meet the VA specifications and there was no variance approval the Contractor shall correct at no additional cost or time to the Government even if a submittal was approved.	A	GOV															
		1.4E	If equipment is submitted which differs in arrangement from that shown, provide documentation proving equivalent performance, design standards and drawings that show the rearrangement of all associated systems. Additionally, any impacts on ancillary equipment or services such as foundations, piping, and electrical shall be the Contractor's responsibility to design, supply, and install at no additional cost or time to the Government. VA approval will be given only if all features of the equipment and associated systems, including accessibility, are equivalent to that required by the contract.	A	GOV														
		1.4F	Prior to submitting shop drawings for approval, Contractor shall certify in writing that manufacturers of all major items of equipment have each reviewed contract documents and have jointly coordinated and properly integrated their equipment and controls to provide a complete and efficient installation.	A	GOV														
		1.4G	Submittals and shop drawings for interdependent items, containing applicable descriptive information, shall be furnished together. Coordinate and properly integrate materials and equipment to provide a completely compatible and efficient installation.	A	GOV														
		1.4H	Coordination/Shop Drawings:	A	GOV														
		1.4H.1	Submit complete consolidated and coordinated shop drawings for all new systems, and for existing systems that are in the same areas.	A	GOV														
		1.4H.2	The coordination/shop drawings shall include plan views, elevations and sections of all systems and shall be on a scale of not less than 1:32 (3/8-inch equal to one foot). Clearly identify and dimension the proposed locations of the principal items of equipment. The drawings shall clearly show locations and adequate clearance for all equipment, piping, valves, control panels and other items. Show the access means for all items requiring access for operations and maintenance. Provide detailed coordination/shop drawings of all piping and duct systems. The drawings should include all lockout/tagout points for all energy/hazard sources for each piece of equipment. Coordinate lockout/tagout procedures and practices with local VA requirements.	A	GOV

				REQUIRED REVIEW BY AND APPROVER		CONTRACTOR SCHEDULE DATES			CONTRACTOR ACTION DATES			APPROVER		APPROVING AUTHORITY DATES				Remarks			
Activity #	Transmittal #	Paragraph #	Description	A - A/E	GOV - VA / USACE	Submit	Approval Needed By	Material Needed By	Action Code	Date of Action	Date Forwarded to Approver / Authorized – Date Received from Contractor	A - A/E	GOV - VA / USACE	Date Approved by A/E Action Code	Date Approved by VA Action Code	Date Approved by USACE Action Code	Action Code				
		1.4A	The contractor shall, in accordance with Section 01 33 23, SHOP DRAWINGS, PRODUCT DATA, AND SAMPLES, furnish a complete submission for all air handling units covered in the project. The submission shall include all information listed below. Partial and incomplete submissions shall be rejected without reviews.	NA	NA																
		1.4B	Manufacturer's Literature and Data:	A	GOV																
		1.4B.1	Submittals for AHUs shall include fans, drives, motors, coils, sound attenuators, mixing box with outside/return air dampers, filter housings, blender sections, and all other related accessories. The contractor shall provide custom drawings showing total air handling unit assembly including dimensions, operating weight, access sections, flexible connections, door swings, controls penetrations, electrical disconnect, lights, duplex receptacles, switches, wiring, utility connection points, unit support system, vibration isolators, drain pan, pressure drops through each component (filter, coil etc).	A	GOV																
		1.4B.2	Submittal drawings of section or component only will not be acceptable. Contractor shall also submit performance data including performance test results, charts, curves or certified computer selection data; data sheets; fabrication and insulation details. If the unit cannot be shipped in one piece, the contractor shall indicate the number of pieces that each unit will have to be broken into to meet shipping and job site rigging requirements. This data shall be submitted in hard copies and in electronic version compatible to AutoCAD version used by the VA at the time of submission.	A	GOV																
		1.4B.3	Submit sound power levels in each octave band for the inlet and discharge of the fan and at entrance and discharge of AHUs at scheduled conditions. In absence of sound power ratings refer to Section 23 05 41, NOISE AND VIBRATION CONTROL FOR HVAC PIPING AND EQUIPMENT.	A	GOV																
		1.4B.4	Provide fan curves showing Cubic Feet per Minute, static pressure, efficiency, and horsepower for design point of operation and at maximum design Cubic Feet per Minute.	A	GOV																
		1.4B.5	Submit total fan static pressure, external static pressure, for AHU including total, inlet and discharge pressures, and itemized specified internal losses and unspecified internal losses. Refer to air handling unit schedule on drawings.	A	GOV																
		1.4C	Maintenance and operating manuals in accordance with Section 01 00 00, GENERAL REQUIREMENTS. Include instructions for lubrication, filter replacement, motor and drive replacement, spare part lists, and wiring diagrams.	A	GOV																
		1.4D	Submit written test procedures two weeks prior to factory testing. Submit written results of factory tests for approval prior to shipping.	A	GOV																
		1.4E	Submit shipping information that clearly indicates how the units will be shipped in compliance with the descriptions below.	A	GOV																
		1.4E.1	Units shall be shipped in one (1) piece where possible and in shrink wrapping to protect the unit from dirt, moisture and/or road salt.	A	GOV

Spec Section 26 05 73 Overcurrent Protective Device Coordination Study																				
		1.4A	Submit in accordance with Paragraph, SUBMITTALS in Section 26 05 11, REQUIREMENTS FOR ELECTRICAL INSTALLATIONS, and the following requirements:	NA	NA															
		1.4A.1	Product data on the software program to be used for the study. Software shall be in mainstream use in the industry, shall provide device settings and ratings, and shall show selective coordination by time-current drawings.	A	GOV															
		1.4A.2	Complete study as described in paragraph 1.6. Submittal of the study shall be well-coordinated with submittals of the shop drawings for equipment in related specification sections.	A	GOV															
		1.4A.3	Certifications: Two weeks prior to final inspection, submit the following.	A	GOV															
		1.4A.3a	Certification by the Contractor that the overcurrent protective devices have been set in accordance with the approved study.	A	GOV															
Spec Section 26 22 00 Low-Voltage Transformers																				
		1.4A	Submit in accordance with Paragraph, SUBMITTALS in Section 26 05 11, REQUIREMENTS FOR ELECTRICAL INSTALLATIONS, and the following requirements:	NA	NA															
		1.4A.1	Shop Drawings:	A	GOV															
		1.4A.1a	Submit sufficient information to demonstrate compliance with drawings and specifications.	A	GOV															
		1.4A.1b	Include electrical ratings, dimensions, mounting details, materials, required clearances, terminations, weight, temperature rise, wiring and connection diagrams, plan, front, side, and rear elevations, accessories, and device nameplate data.	A	GOV															
		1.4A.1c	Certification from the manufacturer that representative transformers have been seismically tested to International Building Code requirements. Certification shall be based upon simulated seismic forces on a shake table or by analytical methods, but not by experience data or other methods.	A	GOV															
		1.4A.2	Manuals:	A	GOV															
		1.4A.2a	Submit, simultaneously with the shop drawings, companion copies of complete maintenance and operating manuals including technical data sheets and wiring diagrams.	A	GOV															
		1.4A.2a .1	Schematic signal and control diagrams, with all terminals identified, matching terminal identification in the transformers.	A	GOV

Submittals lacking the breath or depth these requirements will be considered incomplete and rejected. Submissions are considered multidisciplinary and shall require coordination with applicable divisions to provide a complete and comprehensive submission package. All submittals shall include adequate descriptive literature, catalog cuts, shop drawings and other data necessary for the Government to ascertain that the proposed equipment and materials comply with specification requirements. Catalog cuts submitted for approval shall be legible and clearly identify equipment being submitted. Additional general provisions are as follows:	A	GOV																
		1.6E.1	The Contractor shall schedule submittals in order to maintain the project schedule. For coordination drawings refer to Specification Section 01 33 10 - Design Submittal Procedures, which outline basic submittal requirements and coordination. Section 01 33 10 shall be used in conjunction with this section.	A	GOV																
		1.6E.2	The Contractor shall identify variations from requirements of Contract Documents and state product and system limitations, which may be detrimental to successful performance of the completed work or system.	A	GOV

		1.6E.3	Each package shall be submitted at one (1) time for each review and include components from applicable disciplines (e.g., electrical work, architectural finishes, door hardware, etc.) which are required to produce an accurate and detailed depiction of the project.	A	GOV																
		1.6E.4	Manufacturer's information used for submittal shall have pages with items for approval tagged, items on pages shall be identified, and capacities and performance parameters for review shall be clearly marked through use of an arrow or highlighting. Provide space for COR and Contractor review stamps.	A	GOV																
		1.6E.5	Technical Data Drawings shall be in the latest version of AutoCAD®, drawn accurately, and in accordance with VA CAD Standards CAD Standard Application Guide, and VA BIM Guide. FREEHAND SKETCHES OR COPIED VERSIONS OF THE CONSTRUCTION DOCUMENTS WILL NOT BE ACCEPTED. The Contractor shall not reproduce Contract Documents or copy standard information as the basis of the Technical Data Drawings. If departures from the technical data drawings are subsequently deemed necessary by the Contractor, details of such departures and the reasons thereof shall be submitted in writing to the COR for approval before the initiation of work.	A	GOV																
		1.6E.6	Packaging: The Contractor shall organize the submissions according to the following packaging requirements.	A	GOV																
		1.6E.6a	Binders: For each manual, provide heavy duty, commercial quality, durable three (3) ring vinyl covered loose leaf binders, sized to receive 8.5 x 11 in paper, and appropriate capacity to accommodate the contents. Provide a clear plastic sleeve on the spine to hold labels describing the contents. Provide pockets in the covers to receive folded sheets.	A	GOV																
		1.6E.6a .1	Where two (2) or more binders are necessary to accommodate data; correlate data in each binder into related groupings according to the Project Manual table of contents. Cross-referencing other binders where necessary to provide essential information for communication of proper operation and/or maintenance of the component or system.	A	GOV																
		1.6E.6a .2	Identify each binder on the front and spine with printed binder title, Project title or name, and subject matter covered. Indicate the volume number if applicable.	A	GOV																
		1.6E.6b	Dividers: Provide heavy paper dividers with celluloid tabs for each Section. Mark each tab to indicate contents.	A	GOV																
		1.6E.6c	Protective Plastic Jackets: Provide protective transparent plastic jackets designed to enclose diagnostic software for computerized electronic equipment.	A	GOV																
		1.6E.6d	Text Material: Where written material is required as part of the manual use the manufacturer's standard printed material, or if not available, specially prepared data, neatly typewritten on 8.5 inches by 11 inches, 20-pound, white bond paper.	A	GOV

		1.6E.6e	Drawings: Where drawings and/or diagrams are required as part of the manual, provide reinforced punched binder tabs on the drawings and bind them with the text.	A	GOV															
		1.6E.6e .1	Where oversized drawings are necessary, fold the drawings to the same size as the text pages and use as a foldout.	A	GOV															
		1.6E.6e .2	If drawings are too large to be used practically as a foldout, place the drawing, neatly folded, in the front or rear pocket of the binder. Insert a type written page indicating the drawing title, description of contents and drawing location at the appropriate location of the manual.	A	GOV															
		1.6E.6e .3	Drawings shall be sized to ensure details and text is of legible size. Text shall be no less than 1/16" tall.	A	GOV															
		1.6E.6f	Manual Content: Submit in accordance with Section 01 00 00, GENERAL REQUIREMENTS.	A	GOV															
		1.6E.6f .1	Maintenance and Operation Manuals: Submit as required for systems and equipment specified in the technical sections. Furnish four copies, bound in hardback binders, (manufacturer's standard binders) or an approved equivalent. Furnish one complete manual as specified in the technical section but in no case later than prior to performance of systems or equipment test and furnish the remaining manuals prior to contract completion.	A	GOV															
		1.6E.6f .2	Inscribe the following identification on the cover: the words "MAINTENANCE AND OPERATION MANUAL," the name and location of the system, equipment, building, name of Contractor, and contract number. Include in the manual the names, addresses, and telephone numbers of each subcontractor installing the system or equipment and the local representatives for the system or equipment.	A	GOV															
		1.6E.6f.3	The manuals shall include:	A	GOV															
		1.6E.6f .3a	Internal and interconnecting wiring and control diagrams with data to explain detailed operation and control of the equipment.	A	GOV															
		1.6E.6f.3b	A control sequence describing start-up, operation, and shutdown.	A	GOV															
		1.6E.6f.3c	Description of the function of each principal item of equipment.	A	GOV															
		1.6E.6f.3d	Installation and maintenance instructions.	A	GOV															
		1.6E.6f.3e	Safety precautions.	A	GOV

		1.6E.6f .3j	Appendix; list qualified permanent servicing organizations for support of the equipment, including addresses and certified qualifications.	A	GOV																
		1.6E.6g	Binder Organization: Organize each manual into separate sections for each piece of related equipment. At a minimum, each manual shall contain a title page, table of contents, copies of Product Data supplemented by drawings and written text, and copies of each warranty, bond, certifications, and service Contract issued. Refer to Group I through V Technical Data Package Submittal requirements for required section content.	A	GOV																
		1.6E.6h	Title Page: Provide a title page as the first sheet of each manual to include the following information; project name and address, subject matter covered by the manual, name and address of the Project, date of the submittal, name, address, and telephone number of the Contractor, and cross references to related systems in other operating and/or maintenance manuals.	A	GOV																
		1.6E.6i	Table of Contents: After the title page, include a type written table of contents for each volume, arranged systematically according to the Project Manual format. Provide a list of each product included, identified by product name or other appropriate identifying symbols and indexed to the content of the volume. Where more than one (1) volume is required to hold data for a particular system, provide a comprehensive table of contents for all volumes in each volume of the set.	A	GOV																
		1.6E.6j	General Information Section: Provide a general information section immediately following the table of contents, listing each product included in the manual, identified by product name. Under each product, list the name, address, and telephone number of the installer and maintenance Contractor. In addition, list a local source for replacement parts and equipment.	A	GOV																
		1.6E.6k	Drawings: Provide specially prepared drawings where necessary to supplement the manufacturers printed data to illustrate the relationship between components of equipment or systems or provide control or flow diagrams. Coordinate these drawings with information contained in Project Record Drawings to assure correct illustration of the completed installation.	A	GOV																
		1.6E.6l	Manufacturer's Data: Where manufacturer's standard printed data is included in the manuals, include only those sheets that are pertinent to the part or product installed. Mark each sheet to identify each part or product included in the installation. Where more than one (1) item in tabular format is included, identify each item, using appropriate references from the Contract Documents. Identify data that is applicable to the installation and delete references to information which is not applicable.	A	GOV

		1.6E.6m	Where manufacturer's standard printed data is not available, and the information is necessary for proper operation and maintenance of equipment or systems, or it is necessary to provide additional information to supplement the data included in the manual, prepare written text to provide the necessary information. Organize the text in a consistent format under a separate heading for different procedures. Where necessary, provide a logical sequence of instruction for each operating or maintenance procedure. Where similar or more than one product is listed on the submittal the Contractor shall differentiate by highlighting the specific product to be utilized.	A	GOV																
		1.6E.6n	Calculations: Provide a section for circuit and panel calculations.	A	GOV																
		1.6E.6o	Loading Sheets: Provide a section for DGP Loading Sheets.	A	GOV																
		1.6E.6p	Certifications: Provide section for Contractor's manufacturer certifications.	A	GOV																
		1.6E.7	Contractor Review: Review submittals prior to transmittal. Determine and verify field measurements and field construction criteria. Verify manufacturer's catalog numbers and conformance of submittal with requirements of contract documents. Return non-conforming or incomplete submittals with requirements of the work and contract documents. Apply Contractor's stamp with signature certifying the review and verification of products occurred, and the field dimensions, adjacent construction, and coordination of information is in accordance with the requirements of the contract documents.	A	GOV																
		1.6E.8	Resubmission: Revise and resubmit submittals as required within 15 calendar days of return of submittal. Make resubmissions under procedures specified for initial submittals. Identify all changes made since previous submittal.	A	GOV																
		1.6E.9	Product Data: Within 15 calendar days after execution of the contract, the Contractor shall submit for approval a complete list of all of major products proposed for use. The data shall include name of manufacturer, trade name, model number, the associated contract document section number, paragraph number, and the referenced standards for each listed product.	A	GOV																
		1.6F	FIPS 201 Compliance Certificates	A	GOV																
		1.6F.1	Provide Certificates for all software components and device types utilizing credential verification. Provide certificates for:	A	GOV																
		1.6F.1a	Certificate Management	A	GOV																
		1.6F.1a.1	CAK Authentication System	A	GOV																
		1.6F.1a.2	PIV Authentication System	A	GOV

		1.4F	Provide manufacturer security system product cut-sheets. Submit for approval at least 30 days prior to commencement of formal testing, a Security System Operational Test Plan. Include procedures for operational testing of each component and security subsystem, to include performance of an integrated system test.																		
		1.4G	Submit manufacture's certification of Underwriters Laboratories, Inc. (UL) listing as specified. Provide all maintenance and operating manuals per Section 01 00 00, GENERAL REQUIREMENTS, and Section 28 05 00 COMMON WORK RESULTS FOR ELECTRONIC SAFETY AND SECURITY.	A	GOV																
		1.4H	General: Submittals shall be in full compliance of the Contract Documents. All submittals shall be provided in accordance with this section. Submittals lacking the breath or depth these requirements will be considered incomplete and rejected. Submissions are considered multidisciplinary and shall require coordination with applicable divisions to provide a complete and comprehensive submission package. Additional general provisions are as follows:	A	GOV																
		1.4H.1	The Contractor shall schedule submittals in order to maintain the project schedule. For coordination drawings refer to Specification Section 01 33 23 - SHOP DRAWINGS, PRODUCT DATA AND SAMPLES , which outline basic submittal requirements and coordination.	A	GOV																
		1.4H.2	The Contractor shall identify variations from requirements of Contract Documents and state product and system limitations, which may be detrimental to successful performance of the completed work or system.	A	GOV																
		1.4H.3	Each package shall be submitted at one (1) time for each review and include components from applicable disciplines (e.g., electrical work, architectural finishes, door hardware) which are required to produce an accurate and detailed depiction of the project.	A	GOV																
		1.4H.4	Manufacturer's information used for submittal shall have pages with items for approval tagged, items on pages shall be identified, and capacities and performance parameters for review shall be clearly marked through use of an arrow or highlighting. Provide space for COR and Contractor review stamps.	A	GOV																
		1.4H.5	Technical Data Drawings shall be in the latest version of AutoCAD®, drawn accurately, and in accordance with VA CAD Standards. FREEHAND SKETCHES OR COPIED VERSIONS OF THE CONSTRUCTION DOCUMENTS WILL NOT BE ACCEPTED. The Contractor shall not reproduce Contract Documents or copy standard information as the basis of the Technical Data Drawings. If departures from the technical data drawings are subsequently deemed necessary by the Contractor, details of such departures and the reasons thereof shall be submitted in writing to the COR for approval before the initiation of work.	A	GOV																
		1.4H.6	Packaging: The Contractor shall organize the submissions according to the following packaging requirements.	A	GOV

		1.4H.6a	Binders: For each manual, provide heavy duty, commercial quality, durable three (3) ring vinyl covered loose leaf binders, sized to receive 8.5 x 11 in paper, and appropriate capacity to accommodate the contents. Provide a clear plastic sleeve on the spine to hold labels describing the contents. Provide pockets in the covers to receive folded sheets.	A	GOV																
		1.4H.6a.1	Where two (2) or more binders are necessary to accommodate data, correlate data in each binder into related groupings according to the Project Manual table of contents. Cross-referencing other binders where necessary to provide essential information for communication of proper operation and or maintenance of the component or system.	A	GOV																
		1.4H.6a.2	Identify each binder on the front and spine with printed binder title, Project title or name, and subject matter covered. Indicate the volume	A	GOV																
		1.4H.6b	Dividers: Provide heavy paper dividers with celluloid tabs for each Section. Mark each tab to indicate contents.	A	GOV																
		1.4H.6c	Protective Plastic Jackets: Provide protective transparent plastic jackets designed to enclose diagnostic software for computerized electronic equipment.	A	GOV																
		1.4H.6d	Text Material: Where written material is required as part of the manual use the manufacturer's standard printed material, or if not available, specially prepared data, neatly typewritten on 8.5 inches by 11 inches 20 pound white bond paper.	A	GOV																
		1.4H.6e	Drawings: Where drawings and/or diagrams are required as part of the manual, provide reinforced punched binder tabs on the drawings and bind them with the text.	A	GOV																
		1.4H.6e.1	Where oversized drawings are necessary, fold the drawings to the same size as the text pages and use as a foldout.	A	GOV																
		1.4H.6e.2	If drawings are too large to be used practically as a foldout, place the drawing, neatly folded, in the front or rear pocket of the binder. Insert a	A	GOV																
		1.4H.6e.3	Drawings shall be sized to ensure details and text is of legible size. Text shall be no less than 1/16" tall.	A	GOV																
		1.4H.6f	Manual Content: In each manual include information specified in the individual Specification section, and the following information for each major component of building equipment and controls:	A	GOV																
		1.4H.6f.1	General system or equipment description.	A	GOV																
		1.4H.6f.2	Design factors and assumptions.	A	GOV																
		1.4H.6f.3	Copies of applicable Shop Drawings and Product Data.	A	GOV																
		1.4H.6f.4	System or equipment identification including: manufacturer, model and serial numbers of each component, operating instructions, emergency instructions, wiring diagrams, inspection and test procedures, maintenance procedures and schedules, precautions against improper use and maintenance, repair instructions, sources of required maintenance materials and related services, and a manual index.	A	GOV																

		PROJECT:	Repair-Replace Elevators in B-41																	SUBMITTAL REGISTER	
		LOCATION:	Albuquerque, NM																		
		PROJECT NO:	501-19-101 | ACG: 19-262					CONTRACT NO:	36C25819D0036												
		CONTRACTOR:						TASK ORDER NO:	36C25819N0403												
				REQUIRED REVIEW BY AND APPROVER		CONTRACTOR SCHEDULE DATES			CONTRACTOR ACTION DATES			APPROVER		APPROVING AUTHORITY DATES				Remarks			
Activity #	Transmittal #	Paragraph #	Description	A - A/E	GOV - VA / USACE	Submit	Approval Needed By	Material Needed By	Action Code	Date of Action	Date Forwarded to Approver / Authorized – Date Received from Contractor	A - A/E	GOV - VA / USACE	Date Approved by A/E Action Code	Date Approved by VA Action Code	Date Approved by USACE Action Code	Action Code				
		1.4H.6g	Binder Organization: Organize each manual into separate sections for each piece of related equipment. At a minimum, each manual shall contain a title page, table of contents, copies of Product Data supplemented by drawings and written text, and copies of each warranty, bond, certifications, and service Contract issued. Refer to Group I through V Technical Data Package Submittal requirements for required section content.	A	GOV																
		1.4H.6h	Title Page: Provide a title page as the first sheet of each manual to include the following information; project name and address, subject matter covered by the manual, name and address of the Project, date of the submittal, name, address, and telephone number of the Contractor, and cross references to related systems in other operating and/or maintenance manuals.	A	GOV																
		1.4H.6i	Table of Contents: After the title page, include a type written table of contents for each volume, arranged systematically according to the Project Manual format. Provide a list of each product included, identified by product name or other appropriate identifying symbols and indexed to the content of the volume. Where more than one (1) volume is required to hold data for a particular system, provide a comprehensive table of contents for all volumes in each volume of the set.	A	GOV																
		1.4H.6j	General Information Section: Provide a general information section immediately following the table of contents, listing each product included in the manual, identified by product name. Under each product, list the name, address, and telephone number of the installer and maintenance Contractor. In addition, list a local source for replacement parts and equipment.	A	GOV																
		1.4H.6k	Drawings: Provide specially prepared drawings where necessary to supplement the manufacturers printed data to illustrate the relationship between components of equipment or systems, or provide control or flow diagrams. Coordinate these drawings with information contained in Project Record Drawings to assure correct illustration of the completed installation.	A	GOV																
		1.4H.6l	Manufacturer's Data: Where manufacturer's standard printed data is included in the manuals, include only those sheets that are pertinent to the part or product installed. Mark each sheet to identify each part or product included in the installation. Where more than one (1) item in tabular format is included, identify each item, using appropriate references from the Contract Documents. Identify data that is applicable to the installation and delete references to information which is not applicable.	A	GOV

		1.4H.6m	Where manufacturer's standard printed data is not available and the information is necessary for proper operation and maintenance of equipment or systems, or it is necessary to provide additional information to supplement the data included in the manual, prepare written text to provide the necessary information. Organize the text in a consistent format under a separate heading for different procedures. Where necessary, provide a logical sequence of instruction for each operating or maintenance procedure. Where similar or more than one product is listed on the submittal the Contractor shall differentiate by highlighting the specific product to be utilized.	A	GOV																
		1.4H.6n	Calculations: Provide a section for circuit and panel calculations.	A	GOV																
		1.4H.6o	Loading Sheets: Provide a section for DGP Loading Sheets.	A	GOV																
		1.4H.6p	Certifications: Provide section for Contractor's manufacturer certifications.	A	GOV																
		1.4H.7	Contractor Review: Review submittals prior to transmittal. Determine and verify field measurements and field construction criteria. Verify manufacturer's catalog numbers and conformance of submittal with requirements of contract documents. Return non-conforming or incomplete submittals with requirements of the work and contract documents. Apply Contractor's stamp with signature certifying the review and verification of products occurred, and the field dimensions, adjacent construction, and coordination of information is in accordance with the requirements of the contract documents.	A	GOV																
		1.4H.8	Resubmission: Revise and resubmit submittals as required within 15 calendar days of return of submittal. Make resubmissions under procedures specified for initial submittals. Identify all changes made since previous submittal.	A	GOV																
		1.4H.9	Product Data: Within 15 calendar days after execution of the contract, the Contractor shall submit for approval a complete list of all of major products proposed for use. The data shall include name of manufacturer, trade name, model number, the associated contract document section number, paragraph number, and the referenced standards for each listed product.	A	GOV																
		1.4I	FIPS 201 Compliance Certificates	A	GOV																
		1.4I.1	Provide Certificates for all software components and device types utilizing credential verification. Provide certificates for:	A	GOV																
		1.4I.1a	Card Readers	A	GOV																
		1.4I.1b	PIV Middelware	A	GOV																
		1.4I.1c	Template Matcher	A	GOV																
		1.4J	Approvals will be based on complete submission of manuals together with shop drawings.	A	GOV																
Spec Section 28 23 00 Video Surveillance																					
		1.5A	Submit below items in conjunction with Master Specification Sections 01 33 23, Shop Drawings, Product Data, and Samples, and Section 02 41 00, Demolition Drawings.	NA	NA																
		1.5B	Provide certificates of compliance with Section 1.4, Quality Assurance.	A	GOV

		1.5C	Provide a pre-installation and as-built design package in both electronic format and on paper, minimum size 1220 x 1220 millimeters (48 x 48 inches); drawing submittals shall be per the established project schedule.	A	GOV																
		1.5D	Pre-installation design and as-built packages shall include:	A	GOV																
		1.5D.1	Index Sheet that shall:	A	GOV																
		1.5D.1a	Define each page of the design package to include facility name, building name, floor, and sheet number.	A	GOV																
		1.5D.1b	Provide a list of all security abbreviations and symbols.	A	GOV																
		1.5D.1c	Reference all general notes that are utilized within the design package.	A	GOV																
		1.5D.1d	Specification and scope of work pages for all security systems that are applicable to the design package that will:	A	GOV																
		1.5D.1d.1	Outline all general and job specific work required within the design package.	A	GOV																
		1.5D.1d.2	Provide a device identification table outlining device Identification (ID) and use for all security systems equipment utilized in the design package.	A	GOV																
		1.5D.2	Floor plans, site plans, and enlarged plans shall:	A	GOV																
		1.5D.2a	Include a title block as defined above.	A	GOV																
		1.5D.2b	Define the drawings scale in both standard and metric measurements.	A	GOV																
		1.5D.2c	Provide device identification and location.	A	GOV																
		1.5D.2d	Address all signal and power conduit runs and sizes that are associated with the design of the electronic security system and other security elements (e.g., barriers).	A	GOV																
		1.5D.2e	Identify all pull box and conduit locations, sizes, and fill capacities.	A	GOV																
		1.5D.2f	Address all general and drawing specific notes for a particular drawing sheet.	A	GOV																
		1.5D.3	A riser drawing for each applicable security subsystem shall:	A	GOV																
		1.5D.3a	Indicate the sequence of operation.	A	GOV																
		1.5D.3b	Relationship of integrated components on one diagram.	A	GOV																
		1.5D.3c	Include the number, size, identification, and maximum lengths of interconnecting wires.	A	GOV																
		1.5D.3d	Wire/cable types shall be defined by a wire and cable schedule. The schedule shall utilize a lettering system that shall correspond to the wire/cable it represents (example: A = 18 AWG/1 Pair Twisted, Unshielded). This schedule shall also provide the manufacturer's name and part number for the wire/cable being installed.	A	GOV																
		1.5D.4	A system drawing for each applicable security system shall:	A	GOV																
		1.5D.4a	Identify how all equipment within the system, from main panel to device, shall be laid out and connected.	A	GOV																
		1.5D.4b	Provide full detail of all system components wiring from point-to-point.	A	GOV																
		1.5D.4c	Identify wire types utilized for connection, interconnection with associate security subsystems.	A	GOV																
		1.5D.4d	Show device locations that correspond to the floor plans.	A	GOV																
		1.5D.4e	All general and drawing specific notes shall be included with the system drawings.	A	GOV

		1.5D.5	A schedule for all of the applicable security subsystems shall be included. All schedules shall provide the following information:	A	GOV															
		1.5D.5a	Device ID.	A	GOV															
		1.5D.5b	Device Location (e.g. site, building, floor, room number, location, and description).	A	GOV															
		1.5D.5c	Mounting type (e.g. flush, wall, surface).	A	GOV															
		1.5D.5d	Power supply or circuit breaker and power panel number.	A	GOV															
		1.5D.5e	In addition, for the VASS Systems, provide the camera ID, camera type (e.g. fixed or pan/tilt/zoom (P/T/Z), lens type (e.g. for fixed cameras only) and housing model number.	A	GOV															
		1.5E	Provide manufacturer security system product cut-sheets. Submit for approval at least 30 days prior to commencement of formal testing, a Security System Operational Test Plan. Include procedures for operational testing of each component and security subsystem, to include performance of an integrated system test.	A	GOV															
		1.5F	Submit manufacture's certification of Underwriters Laboratories, Inc. (UL) listing as specified. Provide all maintenance and operating manuals per the VA General Requirements, Section 01 00 00, GENERAL REQUIREMENTS.	A	GOV															
Spec Section 28 31 00 Fire Detection and Alarm																				
		1.4A	General: Submit 5 copies in accordance with Section 01 33 23, SHOP DRAWINGS, PRODUCT DATA, AND SAMPLES, and Section 26 05 11, REQUIREMENTS FOR ELECTRICAL INSTALLATIONS.	NA	NA															
		1.4B	Drawings:	A	GOV															
		1.4B.1	Prepare drawings using AutoCAD latest Release software and include all contractors information. Layering shall be by VA criteria as provided by the Contracting Officer Representative (COR). Bid drawing files on AutoCAD shall be provided to the Contractor at the pre-construction meeting. The contractor shall be responsible for verifying all critical dimensions shown on the drawings provided by VA.	A	GOV															
		1.4B.2	Floor plans: Provide locations of all devices (with device number at each addressable device corresponding to control unit programming), appliances, panels, equipment, junction/terminal cabinets/boxes, risers, electrical power connections, individual circuits and raceway routing, system zoning; number, size, and type of raceways and conductors in each raceway; conduit fill calculations with cross section area percent fill for each type and size of conductor and raceway. Only those devices connected and incorporated into the final system shall be on these floor plans. Do not show any removed devices on the floor plans. Show all interfaces for all fire safety functions.	A	GOV

		1.4B.3	Riser diagrams: Provide, for the entire system, the number, size and type of riser raceways and conductors in each riser raceway and number of each type device per floor and zone. Show door holder interface, elevator control interface, HVAC shutdown interface, fire extinguishing system interface, and all other fire safety interfaces. Show wiring Styles on the riser diagram for all circuits. Provide diagrams both on a per building and campus wide basis.	A	GOV																
		1.4B.4	Detailed wiring diagrams: Provide for control panels, modules, power supplies, electrical power connections, auxiliary relays and annunciators showing termination identifications, size and type conductors, circuit boards, LED lamps, indicators, adjustable controls, switches, ribbon connectors, wiring harnesses, terminal strips and connectors, spare zones/circuits, battery and battery calculations. Diagrams shall be drawn to a scale sufficient to show spatial relationships between components, enclosures and equipment configuration.	A	GOV																
		1.4B.5	Two weeks prior to final inspection, the Contractor shall deliver to the COR 3 sets of as-built drawings and one set of the as-built drawing computer files (using AutoCAD latest release) . As-built drawings (floor plans) shall show all new and/or existing conduit used for the fire alarm system.	A	GOV																
		1.4C	Manuals:	A	GOV																
		1.4C.1	Submit simultaneously with the shop drawings, companion copies of complete maintenance and operating manuals including technical data sheets for all items used in the system, power requirements, device wiring diagrams, dimensions, and information for ordering replacement parts.	A	GOV																
		1.4C.1a	Wiring diagrams shall have their terminals identified to facilitate installation, operation, expansion and maintenance.	A	GOV																
		1.4C.1b	Wiring diagrams shall indicate internal wiring for each item of equipment and the interconnections between the items of equipment.	A	GOV																
		1.4C.1c	Include complete listing of all software used and installation and operation instructions including the input/output matrix chart.	A	GOV																
		1.4C.1d	Provide a clear and concise description of operation that gives, in detail, the information required to properly operate, inspect, test and maintain the equipment and system. Provide all manufacturer's installation limitations including circuit length limitations.	A	GOV																
		1.4C.1e	Complete listing of all digitized voice messages.	A	GOV																
		1.4C.1f	Provide standby battery calculations under normal operating and alarm modes. Battery calculations shall include the magnets for holding the doors open for one minute.	A	GOV																
		1.4C.1g	Include information indicating who will provide emergency service and perform post contract maintenance.	A	GOV																
		1.4C.1h	Provide a replacement parts list with current prices. Include a list of recommended spare parts, tools, and instruments for testing and maintenance purposes.	A	GOV

--- INTENTIONALLY BLANK ---

SECTION 01 00 00
GENERAL REQUIREMENTS

PART 1 - GENERAL

1.1 GENERAL INTENTION

A. Contractor shall completely prepare site for building operations, including demolition and removal of existing structures, and furnish labor and materials and perform work for New Mexico VA Health Care System - Raymond G. Murphy VA Medical Center, VA Project No. 501-19-101 as required by drawings and specifications.

B. Prebid site visits will be identified in the project solicitation. Additional Pre-bid site visits will not be authorized. After award site visits to approved personnel may be made by appointment only. Coordinate with the contracting officer representative (COR) for these requests.

C. Offices of Apogee Consulting Group P.A., as Architect Engineers, will render certain technical services during construction. Such services shall be considered as advisory to the Government and shall not be construed as expressing or implying a contractual act of the Government without affirmations by Contracting Officer or his duly authorized representative.

D. Before placement and installation of work subject to tests by testing laboratory retained by Department of Veterans Affairs, the Contractor shall notify the COR in sufficient time to enable testing laboratory personnel to be present at the site in time for proper taking and testing of specimens and field inspection. Such prior notice shall be not less than three workdays unless otherwise designated by the COR.

E. All employees of general contractor and subcontractors shall comply with VA security management program and obtain permission of the VA police, be identified by project and employer, and restricted from unauthorized access.

1.2 STATEMENT OF BID ITEM(S)

A. ITEM I,GENERAL CONSTRUCTION: Work includes general construction, alterations, necessary removal of existing structures and construction and certain other items. Construction shall modernization of the elevators will ensure up to date compliance with required guidelines. The modernization includes Building 10 In-ground hydraulic passenger elevator #1. Additionally, elevators modernization work will include overhead gearless traction elevators Services elevators 1-4(S1-4) and

Passenger elevators 1-4(P1-4). Minor repairs to Building 41 service elevator #5. Full replacement of Building 41 Dumbwaiter #4.

ITEM II, Electrical Work: Work includes all labor, material, equipment and supervision to perform the required electrical construction work on this project including new disconnects, cab and machine room lighting, low voltage upgrades, and electrical upgrade distribution.

ITEM III, Mechanical Work: Work includes all labor, material, equipment, and supervision to perform the required Mechanical construction work on this project including installation of Building 41 AHU and upgrade of ventilation distribution, and cooling.

1.3 SPECIFICATIONS AND DRAWINGS FOR CONTRACTOR

A. Drawings and contract documents may be obtained from the website where the solicitation is posted. Additional copies will be at Contractor's expense.

1.4 CONSTRUCTION SECURITY REQUIREMENTS

A. Security Plan:

1. The security plan defines both physical and administrative security procedures that will remain effective for the entire duration of the project.
2. The General Contractor is responsible for assuring that all sub-contractors working on the project and their employees also comply with these regulations.

B. Security Procedures:

1. General Contractor’s employees shall not enter the project site without appropriate badge. They may also be subject to inspection of their personal effects when entering or leaving the project site.
   a. Except for initiating registration with the PIV Sponsor, personnel conducting business pursuant to this contract shall not enter VA owned or leased property without a current and valid VA issued badge. Personnel may also be subject to inspection of their personal effects, including tool boxes, lockers, vehicle, or any other container, whilst on VA owned or leased property upon request from VA Police.

   b. To be processed for a VA ID badge, contact project specific COR arrange for an appointment and to receive information on the required documentation. The appropriate contact information will

be issued during the Pre-Construction meeting with the Contracting Officer and the Contracting Officer's Representative (COR). Applicants may be subject to the following classifications of badging:

(i) Flash Badge: common physical access and no biometric information required

(ii) Non-PIV Badge: common physical, restricted physical, and sensitive records access; subject to submitting fingerprints; subject to submitting to a Special Agreement Check (SAC) for a background investigation (allow for 14 calendar days to adjudicate)

(iii) Full PIV Badge: common physical, restricted physical, sensitive records, and logical/data access; subject to submitting fingerprints; subject to submitting to a Special Agreement Check (SAC) for a background investigation (allow for 14 calendar days to adjudicate); subject to submitting to a National Agency Check with Written Inquiries (NACI) background investigation (allow for 60 days to adjudicate).

The level of badging and its corresponding duration of investigation are directly dependent on the level of security access required to perform contract tasks. Refer to the contract drawings for security level access assessments.

2. Before starting work the General Contractor shall give one week's notice to the Contracting Officer so that escort arrangement and coordination can be established and can be provided for the employees. This notice is separate from any notices required for utility shutdown described later in this section.
3. No photography of VA premises is allowed without written permission of the Contracting Officer.
4. VA reserves the right to close down or shut down the project site and order General Contractor's employees off the premises in the event of a national emergency. The General Contractor may return to the site only with the written approval of the Contracting Officer.

C. Key Control:

1. For any door controlling entrance to the construction area(s), the VA will supply to the contractor a door lock and/or its corresponding key, the contractor will provide all remaining door

hardware to support the ABQ VA keying system. The General Contractor will be responsible for ensuring the construction site remains under lock and key to prevent the general population from entering the site. Upon project completion, the General Contractor must return the lock and key to the COR.

2. Reference Medical Center Memorandum FES-138-10 for Key Control requirements

D. Document Control:

1. Before starting any work, the General Contractor/Sub Contractors shall submit an electronic security memorandum describing the approach to following goals and maintaining confidentiality of "sensitive information".
2. The General Contractor is responsible for safekeeping of all drawings, project manual and other project information. This information shall be shared only with those with a specific need to accomplish the project.
3. Certain documents, sketches, videos or photographs and drawings may be marked "Law Enforcement Sensitive" or "Sensitive Unclassified". Secure such information in separate containers and limit the access to only those who will need it for the project. Return the information to the Contracting Officer upon request.
4. These security documents shall not be removed or transmitted from the project site without the written approval of Contracting Officer.
5. All paper waste or electronic media such as CD's and diskettes shall be shredded and destroyed in a manner acceptable to the VA.
6. Notify Contracting Officer and Site Security Officer immediately when there is a loss or compromise of "sensitive information".
7. All electronic information shall be stored in specified location following VA standards and procedures using an Engineering Document Management Software (EDMS).
   a. Security, access and maintenance of all project drawings, both scanned and electronic shall be performed and tracked through the EDMS system.
   b. "Sensitive information" including drawings and other documents may be attached to e-mail provided all VA encryption procedures are followed.

E. Motor Vehicle Restrictions

1. Vehicle authorization request shall be required for any vehicle entering the site and such request shall be submitted 24 hours before the date and time of access. Access shall be restricted to picking up and dropping off materials and supplies.
2. Contractor shall confine all operations (including storage of materials) in project area. Any other use of areas on the Government premises to be authorized or approved by the Contracting Officer Representative. The Contractor shall hold and save the Government, its officers and agents, free and harmless from liability of any nature occasioned by the Contractor’s performance..

1.5 OPERATIONS AND STORAGE AREAS

A. The Contractor shall confine all operations (including storage of materials) on Government premises to areas authorized or approved by the Contracting Officer. The Contractor shall hold and save the Government, its officers and agents, free and harmless from liability of any nature occasioned by the Contractor's performance.

B. Temporary buildings (e.g., storage sheds, shops, offices) and utilities may be erected by the Contractor only with the approval of the Contracting Officer and shall be built with labor and materials furnished by the Contractor without expense to the Government. The temporary buildings and utilities shall remain the property of the Contractor and shall be removed by the Contractor at its expense upon completion of the work. With the written consent of the Contracting Officer, the buildings and utilities may be abandoned and need not be removed.

C. The Contractor shall, under regulations prescribed by the Contracting Officer, use only established roadways, or use temporary roadways constructed by the Contractor when and as authorized by the Contracting Officer. When materials are transported in prosecuting the work, vehicles shall not be loaded beyond the loading capacity recommended by the manufacturer of the vehicle or prescribed by any Federal, State, or local law or regulation. When it is necessary to cross curbs or sidewalks, the Contractor shall protect them from damage. The Contractor shall repair or pay for the repair of any damaged curbs, sidewalks, or roads.

(FAR 52.236-10)

D. Working space and space available for storing materials shall be provided by contractor offsite at no cost to VA. Offsite contractor storage should be coordinated with COR.

E. Workers are subject to rules of Medical Center applicable to their conduct.

F. Execute work in such a manner as to interfere as little as possible with work being done by others.

G. Execute work so as to interfere as little as possible with normal functioning of Raymond G. Murphy VA Medical Center as a whole, including operations of utility services, fire protection systems and any existing equipment, and with work being done by others. Use of equipment and tools that transmit vibrations and noises through the building structure, are not permitted in buildings that are occupied, during construction, jointly by patients or medical personnel, and Contractor's personnel, except as permitted by COR where required by limited working space. Any activities that involve the circumstances above should be coordinate for after normal business hours during the weekend.

1. Do not store materials and equipment in other than assigned areas.
2. Schedule delivery of materials and equipment to immediate construction working areas within buildings in use by Department of Veterans Affairs in quantities sufficient for not more than two work days or as determined acceptable by COR. Provide unobstructed access to Raymond G. Murphy VA Medical Center areas required to remain in operation.
3. Where access by Medical Center personnel to vacated portions of buildings is not required, storage of Contractor's materials and equipment will be permitted subject to fire and safety requirements.

H. Utilities Services: Where necessary to cut existing pipes, electrical wires, conduits, cables, etc., of utility services, or of fire protection systems or communications systems (except telephone), they shall be cut and capped at suitable places where shown; or, in absence of such indication, where directed by COR. All such actions shall be coordinated with the COR or Utility Company involved:

I. Phasing:

The Medical Center must maintain its operation 24 hours a day 7 days a week. Therefore, any interruption in service must be scheduled and

coordinated with the COR to ensure that no lapses in operation occur. It is the CONTRACTOR'S responsibility to develop a work plan and schedule detailing, at a minimum, the procedures to be employed, the equipment and materials to be used, the interim life safety measure to be used during the work, and a schedule defining the duration of the work with milestone subtasks. The work to be outlined shall include, but not be limited to:

To ensure such executions, Contractor shall furnish the COR with a schedule of approximate phasing dates on which the Contractor intends to accomplish work in each specific area of site, building or portion thereof. In addition, Contractor shall notify the COR 30 days in advance of the proposed date of starting work in each specific area of site, building or portion thereof. Arrange such phasing dates to ensure accomplishment of this work in successive phases mutually agreeable to Raymond G. Murphy VA Medical Center COR and Contractor, as outlined below. Adjustments to phasing plan as a result of contractor means and methods shall be verified and coordinated with COR. For general phasing of Building 41 elevator work please refer to phasing on Sheet G-100. For general phasing of Building 10 elevator work please refer to phasing on Sheet G-108.

J. Contractor shall take all measures and provide all material necessary for protecting existing equipment and property in affected areas of construction against dust and debris, so that equipment and affected areas to be used in the Medical Centers operations will not be hindered. Contractor shall permit access to Department of Veterans Affairs personnel and patients through other construction areas which serve as routes of access to such affected areas and equipment. These routes whether access or egress shall be isolated from the construction area by temporary partitions and have walking surfaces, lighting etc. to facilitate patient and staff access. Coordinate alteration work in areas occupied by Department of Veterans Affairs so that Medical Center operations will continue during the construction period.

K. When a building and/or construction site is turned over to Contractor, Contractor shall accept entire responsibility including upkeep and maintenance therefore:

1. Contractor shall maintain a minimum temperature of 4 degrees C (40 degrees F) at all times, except as otherwise specified.

2. Contractor shall maintain in operating condition existing fire protection and alarm equipment. In connection with fire alarm equipment, Contractor shall make arrangements for pre-inspection of site with Fire Department or Company (Department of Veterans Affairs or municipal) whichever will be required to respond to an alarm from Contractor's employee or watchman.
3. Contractor shall guarantee upkeep and continuous operation of elevators.
   a. Furnish complete inspection and maintenance service on entire elevator installation for a period of one (1) year after completion and acceptance of all the elevators in this specification by the COR. This maintenance service shall run concurrently with the warranty. Maintenance work shall be performed by Certified Elevator Mechanics and Apprentices.
   b. Furnish complete preventive inspection, interim and warranty maintenance service on entire elevator installation for a period of one (1) year after completion and acceptance of all the car lifts in this specification by the Resident Engineer. This maintenance service shall begin concurrently with the warranty. Maintenance work shall be performed by Certified Elevator Mechanics and Apprentices.
   c. Upon completion of the engineering phase and submittal process and not less than 30 days prior to mobilization of the project, Contractor to provide interim maintenance for all vertical transportation units being modernized or replaced. These units are as followsP1-P4 Gearless Traction Elevators, S1-S4 Gearless Traction Elevators, T-1 Geared Traction Cart-lift, and Building 10 Hydraulic Elevator 1.

L. Utilities Services: Maintain existing utility services for • at all times. Provide temporary facilities, labor, materials, equipment, connections, and utilities to assure uninterrupted services. Where necessary to cut existing water, steam, gases, sewer or air pipes, or conduits, wires, cables, etc. of utility services or of fire protection systems and communications systems (including telephone), they shall be cut and capped at suitable places where shown; or, in absence of such indication, where directed by COR.

1. No utility service such as water, gas, steam, sewers or electricity, or fire protection systems and communications systems may be interrupted without prior approval of COR . Electrical work shall be accomplished with all affected circuits or equipment de-energized. When an electrical outage cannot be accomplished, work on any energized circuits or equipment shall not commence without a detailed work plan, the Medical Center Director’s prior knowledge and written approval. Refer to specification Sections 26 05 11, REQUIREMENTS FOR ELECTRICAL INSTALLATIONS and 28 05 00, COMMON WORK RESULTS FOR ELECTRONIC SAFETY AND SECURITY for additional requirements.
2. Contractor shall submit a request to interrupt any such services to COR and other VA project representatives, in writing, 30 days in advance of proposed interruption. Request shall state reason, date, exact time of, and approximate duration of such interruption.
3. Contractor will be advised (in writing) of approval of request, or of which other date and/or time such interruption will cause least inconvenience to operations of Raymond G. Murphy VA Medical Center. Interruption time approved by Medical Center may occur at other than Contractor's normal working hours.
4. Major interruptions of any system must be requested, in writing, at least 30 calendar days prior to the desired time and shall be performed as directed by the COR.
5. In case of a contract construction emergency, service will be interrupted on approval of COR. Such approval will be confirmed in writing as soon as practical.
6. Whenever it is required that a connection fee be paid to a public utility provider for new permanent service to the construction project, for such items as water, sewer, electricity, gas or steam, payment of such fee shall be the responsibility of the Government and not the Contractor.

M. Abandoned Lines: All service lines such as wires, cables, conduits, ducts, pipes and the like, and their hangers or supports, which are to be abandoned but are not required to be entirely removed, shall be sealed, capped or plugged at the main, branch or panel they originate from. The lines shall not be capped in finished areas, but shall be removed and sealed, capped or plugged in ceilings, within furred

spaces, in unfinished areas, or within walls or partitions; so that they are completely behind the finished surfaces.

N. Coordinate the work for this contract with other construction operations as directed by COR. This includes the scheduling of traffic and the use of roadways, as specified in Article, USE OF ROADWAYS.

O. Coordination of Construction with Cemetery Director: The burial activities at a National Cemetery shall take precedence over construction activities. The Contractor must cooperate and coordinate with the Cemetery Director, through the COR, in arranging construction schedule to cause the least possible interference with cemetery activities in actual burial areas. Construction noise during the interment services shall not disturb the service. Trucks and workers shall not pass through the service area during this period:

1. The Contractor is required to discontinue his work sufficiently in advance of Easter Sunday, Mother's Day, Father's Day, Memorial Day, Veteran's Day and/or Federal holidays, to permit him to clean up all areas of operation adjacent to existing burial plots before these dates.
2. Cleaning up shall include the removal of all equipment, tools, materials and debris and leaving the areas in a clean, neat condition.

1.6 ALTERATIONS

A. Survey: Before any work is started, the Contractor shall make a thorough survey with the COR and Elevator Design Consultant and a representative of VA Engineering Facilities of buildings and areas of buildings in which alterations occur and furnish a report, signed by both to the Contracting Officer.

This report shall list by rooms and spaces to deviate from Basis of Design:

1. Existing condition and types of resilient flooring, doors, windows, walls and other surfaces not required to be altered throughout affected areas of buildings.
2. Existence and conditions of items such as plumbing fixtures and accessories, electrical fixtures, equipment, venetian blinds, shades, etc., required by drawings to be either reused or relocated, or both.

3. Shall note any discrepancies between drawings and existing conditions at site.
4. Shall designate areas for working space, materials storage and routes of access to areas within buildings where alterations will occur and which have been agreed upon by Contractor COR.
5. Elevator Components related to the project requirements and scope of work.

B. Any items required by drawings to be either reused or relocated or both, found during this survey to be nonexistent, or in opinion of COR, to be in such condition that their use is impossible or impractical, shall be furnished and/or replaced by Contractor with new items in accordance with specifications which will be furnished by Government. Provided the contract work is changed by reason of this subparagraph B, the contract will be modified accordingly, under provisions of clause entitled "DIFFERING SITE CONDITIONS" (FAR 52.236-2) and "CHANGES" (FAR 52.243-4).

C. Re-Survey: Thirty days before expected partial or final inspection date, the Contractor and COR together shall make a thorough re-survey of the areas of buildings involved. They shall furnish a report on conditions then existing, of resilient flooring, doors, windows, walls and other surfaces as compared with conditions of same as noted in first condition survey report:
1. Re-survey report shall also list any damage caused by Contractor to such flooring and other surfaces, despite protection measures; and, will form basis for determining extent of repair work required of Contractor to restore damage caused by Contractor's workers in executing work of this contract.

D. Protection: Provide the following protective measures:
1. Wherever existing roof surfaces are disturbed they shall be protected against water infiltration. In case of leaks, they shall be repaired immediately upon discovery.
2. Temporary protection against damage for portions of existing structures and grounds where work is to be done, materials handled, and equipment moved and/or relocated.
3. Protection of interior of existing structures at all times, from damage, dust and weather inclemency. Wherever work is performed, floor surfaces that are to remain in place shall be adequately

protected prior to starting work, and this protection shall be maintained intact until all work in the area is completed.

1.7 DISPOSAL AND RETENTION

A. Materials and equipment accruing from work removed and from demolition of buildings or structures, or parts thereof, shall be disposed of as follows:

1. Reserved items which are to remain property of the Government are identified by attached tags or noted on drawings or in specifications as items to be stored. Items that remain property of the Government shall be removed or dislodged from present locations in such a manner as to prevent damage which would be detrimental to re-installation and reuse. Store such items where directed by COR.
2. Items not reserved shall become property of the Contractor and be removed by Contractor from Raymond G. Murphy VA Medical Center.
3. Items of portable equipment and furnishings located in rooms and spaces in which work is to be done under this contract shall remain the property of the Government. When rooms and spaces are vacated by the Department of Veterans Affairs during the alteration period, such items which are NOT required by drawings and specifications to be either relocated or reused will be removed by the Government in advance of work to avoid interfering with Contractor's operation.

1.8 RESTORATION

A. Remove, cut, alter, replace, patch and repair existing work as necessary to install new work. Except as otherwise shown or specified, do not cut, alter or remove any structural work, and do not disturb any ducts, plumbing, steam, gas, or electric work without approval of the COR. Existing work to be altered or extended and that is found to be defective in any way, shall be reported to the COR before it is disturbed. Materials and workmanship used in restoring work, shall conform in type and quality to that of original existing construction, except as otherwise shown or specified.

B. Upon completion of contract, deliver work complete and undamaged. Existing work (walls, ceilings, partitions, floors, mechanical and electrical work, lawns, paving, roads, walks, etc.) disturbed or removed as a result of performing required new work, shall be patched, repaired, reinstalled, or replaced with new work, and refinished and left in as good condition as existed before commencing work.

C. At Contractor's own expense, Contractor shall immediately restore to service and repair any damage caused by Contractor's workers to existing piping and conduits, wires, cables, etc., of utility services or of fire protection systems and communications systems (including telephone) which are not scheduled for discontinuance or abandonment.

D. Expense of repairs to such utilities and systems not shown on drawings or locations of which are unknown will be covered by adjustment to contract time and price in accordance with clause entitled "CHANGES" (FAR 52.243-4) and "DIFFERING SITE CONDITIONS" (FAR 52.236-2).

1.9 PHYSICAL DATA

A. Data and information furnished or referred to below is for the Contractor's information. The Government shall not be responsible for any interpretation of or conclusion drawn from the data or information by the Contractor.

1. The indications of physical conditions on the drawings and in the specifications are the result of site investigations by _____.

(FAR 52.236-4)

B. Subsurface conditions have been developed by core borings and test pits. Logs of subsurface exploration are shown diagrammatically on drawings.

C. A copy of the soil report will be made available for inspection by bidders upon request to the COR at the VA Medical Center, _____ and shall be considered part of the contract documents.

D. Government does not guarantee that other materials will not be encountered, nor that proportions, conditions, or character of several materials will not vary from those indicated by explorations. Bidders are expected to examine site of work and logs of borings; and, after investigation, decide for themselves character of materials and make their bids accordingly. Upon proper application to Department of Veterans Affairs, bidders will be permitted to make subsurface explorations of their own at site.

1.10 PROFESSIONAL SURVEYING SERVICES

A. A registered professional land surveyor or registered civil engineer whose services are retained and paid for by the Contractor shall perform services specified herein and in other specification sections.

The Contractor shall certify that the land surveyor or civil engineer is not one who is a regular employee of the Contractor, and that the land surveyor or civil engineer has no financial interest in this contract.

1.11 LAYOUT OF WORK

A. The Contractor shall lay out the work from Government established base lines and benchmarks, indicated on the drawings, and shall be responsible for all measurements in connection with the layout. The Contractor shall furnish, at Contractor's own expense, all stakes, templates, platforms, equipment, tools, materials, and labor required to lay out any part of the work. The Contractor shall be responsible for executing the work to the lines and grades that may be established or indicated by the Contracting Officer. The Contractor shall also be responsible for maintaining and preserving all stakes and other marks established by the Contracting Officer until authorized to remove them. If such marks are destroyed by the Contractor or through Contractor's negligence before their removal is authorized, the Contracting Officer may replace them and deduct the expense of the replacement from any amounts due or to become due to the Contractor.

(FAR 52.236-17)

B. Following completion of general mass excavation and before any other permanent work is performed, establish and plainly mark (through use of appropriate batter boards or other means) sufficient additional survey control points or system of points as may be necessary to assure proper alignment, orientation, and grade of all major features of work. Survey shall include, but not be limited to, location of lines and grades of footings, exterior walls, center lines of columns in both directions, major utilities and elevations of floor slabs:

1. Such additional survey control points or system of points thus established shall be checked and certified by a registered land surveyor or registered civil engineer. Furnish such certification to the COR before any work (such as footings, floor slabs, columns, walls, utilities and other major controlling features) is placed.

C. During progress of work, and particularly as work progresses from floor to floor, Contractor shall have line grades and plumbness of all major form work checked and certified by a registered land surveyor or registered civil engineer as meeting requirements of contract drawings.

Furnish such certification to the COR before any major items of concrete work are placed. In addition, COR certificates from a registered land surveyor or registered civil engineer that the following work is complete in every respect as required by contract drawings.

1. Lines of each building and/or addition.
2. Elevations of bottoms of footings and tops of floors of each building and/or addition.
3. Lines and elevations of sewers and of all outside distribution systems.

D. Whenever changes from contract drawings are made in line or grading requiring certificates, record such changes on a reproducible drawing bearing the registered land surveyor or registered civil engineer seal, and forward these drawings upon completion of work to COR.

D*. Upon completion of the work, the Contractor shall furnish the COR one electronic copy and reproducible drawings at the scale of the contract drawings, showing the finished grade on the grid developed for constructing the work, including burial monuments and fifty foot stationing along new road centerlines. These drawings shall bear the seal of the registered land surveyor or registered civil engineer.

E. The Contractor shall perform the surveying and layout work of this and other articles and specifications in accordance with the provisions of Article "Professional Surveying Services".

1.12 WARRANTY MANAGEMENT

A. Warranty Management Plan: Develop a warranty management plan which contains information relevant to FAR 52.246-21 Warranty of Construction at least 30 days before the planned pre-warranty conference, submit one set of the warranty management plan. Include within the warranty management plan all required actions and documents to assure that the Government receives all warranties to which it is entitled. The plan must be in narrative form and contain sufficient detail to render it suitable for use by future maintenance and repair personnel, whether tradesman, or of engineering background, not necessarily familiar with this contract. The term “status” as indicated below must include due date and whether item has been submitted or was approved. Warranty information made available during the construction phase must be submitted to the Contracting Officer for approval prior to each monthly

invoice for payment. Assemble approved information in a binder and turn over to the Government upon acceptance of the work. The construction warranty period will begin on the date of the project acceptance and continue for the product warranty period. A joint 4 month and 9 month warranty inspection will be conducted, measured from time of acceptance, by the Contactor and the Contracting Officer. Include in the warranty management plan, but not limited to, the following:

1. Roles and responsibilities of all personnel associated with the warranty process, including points of contact and telephone numbers within the company of the Contractor, subcontractors, manufacturers or suppliers involved.
2. Furnish with each warranty the name, address and telephone number of each of the guarantor’s representatives nearest project location.
3. Listing and status of delivery of all Certificates of Warranty for extended warranty items, to include roofs, HVAC balancing, pumps, motors, transformers and for all commissioned systems such as fire protection and alarm systems, sprinkler systems and lightning protection systems, etc.
4. A list for each warranted equipment item, feature of construction or system indicating:
   a. Name of item.
   b. Model and serial numbers.
   c. Location where installed.
   d. Name and phone numbers of manufacturers and suppliers.
   e. Name and phone numbers of manufacturers or suppliers.
   f. Names, addresses and phone numbers of sources of spare parts.
   g. Warranties and terms of warranty. Include one-year overall warranty of construction, including the starting date of warranty of construction. Items which have extended warranties must be indicated with separate warranty expiration dates.
   h. Starting point and duration of warranty period.
   i. Summary of maintenance procedures required to continue the warranty in force.
   j. Cross-reference to specific pertinent Operation and Maintenance manuals.
   k. Organizations, names and phone numbers of persons to call for warranty service.

l. Typical response time and repair time expected for various warranted equipment.

5. The plans for attendance at the 4 and 9-month post construction warranty inspections conducted by the government.
6. Procedure and status of tagging of all equipment covered by extended warranties.
7. Copies of instructions to be posted near selected pieces of equipment where operation is critical for warranty and/or safety reasons.

B. Performance Bond: The Performance Bond must remain effective throughout the construction period.
   1. In the event the Contractor fails to commence and diligently pursue any construction warranty work required, the Contracting Officer will have the work performed by others, and after completion of the work, will charge the remaining construction warranty funds of expenses incurred by the Government while performing the work, including, but not limited to administrative expenses.
   2. In the event sufficient funds are not available to cover the construction warranty work performed by the Government at the contractor’s expenses, the Contracting Officer will have the right to recoup expenses from the bonding company.
   3. Following oral or written notification of required construction warranty repair work, the Contractor shall respond in a timely manner. Written verification will follow oral instructions. Failure to respond will be cause for the Contracting Officer to proceed against the Contractor.

C. Pre-Warranty Conference: Prior to contract completion, and at a time designated by the Contracting Officer, the Contractor shall meet with the Contracting Officer to develop a mutual understanding with respect to the requirements of this section. Communication procedures for Contractor notification of construction warranty defects, priorities with respect to the type of defect, reasonable time required for Contractor response, and other details deemed necessary by the Contracting Officer for the execution of the construction warranty will be established/ reviewed at this meeting. In connection with these requirements and at the time of the Contractor’s quality control completion inspection, furnish the name, telephone number and address

of a licensed and bonded company which is authorized to initiate and pursue construction warranty work action on behalf of the Contractor. This point of contract will be located within the local service area of the warranted construction, be continuously available and be responsive to Government inquiry on warranty work action and status. This requirement does not relieve the Contractor of any of its responsibilities in conjunction with other portions of this provision.

D. Contractor's Response to Construction Warranty Service Requirements: Following oral or written notification by the Contracting Officer, the Contractor shall respond to construction warranty service requirements in accordance with the "Construction Warranty Service Priority List" and the three categories of priorities listed below. Submit a report on any warranty item that has been repaired during the warranty period. Include within the report the cause of the problem, date reported, corrective action taken, and when the repair was completed. If the Contractor does not perform the construction warranty within the timeframe specified, the Government will perform the work and back charge the construction warranty payment item established.

1. First Priority Code 1. Perform onsite inspection to evaluate situation, and determine course of action within 4 hours, initiate work within 6 hours and work continuously to completion or relief.
2. Second Priority Code 2. Perform onsite inspection to evaluate situation, and determine course of action within 8 hours, initiate work within 24 hours and work continuously to completion or relief.
3. Third Priority Code 3. All other work to be initiated within 3 work days and work continuously to completion or relief.
4. The "Construction Warranty Service Priority List" is as follows:

   Code 1-Life Safety Systems

   a. Fire suppression systems.

   b. Fire alarm system(s).

   Code 1-Air Conditioning Systems

   a. Air conditioning leak in part of the building, if causing damage.

   b. Air conditioning system not cooling properly.

   Code 1 Doors

   a. Overhead doors not operational, causing a security, fire or safety problem.

b. Interior, exterior personnel doors or hardware, not functioning properly, causing security, fire or safety problem.

Code 1-Electrical

a. Power failure (entire area or any building operational after 1600 hours).

b. Security lights.

c. Smoke detectors.

Code 2-Electrical

a. Power failure (no power to a room or part of building).

b. Receptacles and lights not operational (in a room or part of building).

Code 1-Gas

a. Leaks and pipeline breaks.

Code 1-Heat

a. Power failure affecting heat.

Code 1-Plumbing

a. Hot water heater failure.

b. Leaking water supply pipes.

Code 3-Interior

a. Floors damaged.

b. Paint chipping or peeling.

c. Casework damaged.

Code 1-Roof Leaks

a. Damage to property is occurring.

Code 3

a. All work not listed above.

E. Warranty Tags: At the time of installation, tag each warranted item with a durable, oil and water-resistant tag approved by the Contracting Officer. Attach each tag with a copper wire and spray with a silicone waterproof coating. Also submit two record copies of the warranty tags showing the layout and design. The date of acceptance and the QC signature must remain blank until the project is accepted for beneficial occupancy. Show the following information on the tag.

Warranty Tags	
Type of product/material	
Model number	
Serial number	

Warranty Tags	
Contract number	
Warranty period from/to	
Inspector’s signature	
Construction Contractor	
Address	
Telephone number	
Warranty Contact	
Address	
Telephone number	
Warranty response time priority code	

1.13 USE OF ROADWAYS

A. For hauling, use only established public roads and roads on Raymond G. Murphy VA Medical Center property and, when authorized by the COR, such temporary roads which are necessary in the performance of contract work. Temporary roads shall be constructed and restoration performed by the Contractor at Contractor's expense. When necessary to cross curbing, sidewalks, or similar construction, they must be protected by well-constructed bridges.

B. When new permanent roads are to be a part of this contract, Contractor may construct them immediately for use to facilitate building operations. These roads may be used by all who have business thereon within zone of building operations.

C. When certain buildings (or parts of certain buildings) are required to be completed in advance of general date of completion, all roads leading thereto must be completed and available for use at time set for completion of such buildings or parts thereof.

1.14 TEMPORARY USE OF MECHANICAL AND ELECTRICAL EQUIPMENT

A. Use of new installed mechanical and electrical equipment to provide heat, ventilation, plumbing, light and power will be permitted subject to written approval and compliance with the following provisions:

1. Permission to use each unit or system must be given by COR in writing. If the equipment is not installed and maintained in accordance with the written agreement and following provisions, the COR will withdraw permission for use of the equipment.

2. Electrical installations used by the equipment shall be completed in accordance with the drawings and specifications to prevent damage to the equipment and the electrical systems, i.e. transformers, relays, circuit breakers, fuses, conductors, motor controllers and their overload elements shall be properly sized, coordinated and adjusted. Installation of temporary electrical equipment or devices shall be in accordance with NFPA 70, National Electrical Code, (2014 Edition), Article 590, *Temporary Installations.* Voltage supplied to each item of equipment shall be verified to be correct and it shall be determined that motors are not overloaded. The electrical equipment shall be thoroughly cleaned before using it and again immediately before final inspection including vacuum cleaning and wiping clean interior and exterior surfaces.
3. Units shall be properly lubricated, balanced, and aligned. Vibrations must be eliminated.
4. Automatic temperature control systems for preheat coils shall function properly and all safety controls shall function to prevent coil freeze-up damage.
5. The air filtering system utilized shall be that which is designed for the system when complete, and all filter elements shall be replaced at completion of construction and prior to testing and balancing of system.
6. All components of heat production and distribution system, metering equipment, condensate returns, and other auxiliary facilities used in temporary service shall be cleaned prior to use; maintained to prevent corrosion internally and externally during use; and cleaned, maintained and inspected prior to acceptance by the Government. Boilers, pumps, feedwater heaters and auxiliary equipment must be operated as a complete system and be fully maintained by operating personnel. Boiler water must be given complete and continuous chemical treatment.

B. Prior to final inspection, the equipment or parts used which show wear and tear beyond normal, shall be replaced with identical replacements, at no additional cost to the Government.

C. This paragraph shall not reduce the requirements of the mechanical and electrical specifications sections.

D. Any damage to the equipment or excessive wear due to prolonged use will be repaired replaced by the contractor at the contractor’s expense.

1.15 TEMPORARY USE OF EXISTING ELEVATORS

A. Contractor will not be allowed the use of existing elevators. Outside type hoist shall be used by Contractor for transporting materials and equipment.

B. Use of existing elevators for handling building materials and Contractor's personnel will be permitted subject to following provisions:

1. Contractor makes all arrangements with the COR for use of elevators. The COR will ascertain that elevators are in proper condition. Contractor may use elevators Nos. P1-P4 and S-S4 in Building Nos. 41 and 10 when scheduled for upgrade between the hours of 7am and 3:30pm and for special nonrecurring time intervals when permission is granted. Personnel for operating elevators will not be provided by the Department of Veterans Affairs.
2. Contractor covers and provides maximum protection of following elevator components:
   a. Entrance jambs, heads soffits and threshold plates.
   b. Entrance columns, canopy, return panels and inside surfaces of car enclosure walls.
   c. Finish flooring.
3. Government will accept hoisting ropes of elevator and rope of each speed governor if they are worn under normal operation. However, if these ropes are damaged by action of foreign matter such as sand, lime, grit, stones, etc., during temporary use, they shall be removed and replaced by new hoisting ropes at the contractor’s expense.
4. If brake lining of elevators are excessively worn or damaged during temporary use, they shall be removed and replaced by new brake lining at the contractor’s expense.
5. All parts of main controller, starter, relay panel, selector, etc., worn or damaged during temporary use shall be removed and replaced with new parts at the contractor’s expense, if recommended by elevator inspector after elevator is released by Contractor.

6. Place elevator in condition equal, less normal wear, to that existing at time it was placed in service of Contractor as approved by Contracting Officer.

1.16 TEMPORARY USE OF NEW ELEVATORS

A. The Contractor and his personnel shall be permitted use of new elevator(s) subject to the following provisions:

1. Contractor shall make arrangements with the COR for use of elevator(s). Contractor may obtain elevator(s) for exclusive use.
2. Prior to the use of elevator(s), the Contractor shall have the elevator(s) inspected and accepted by an ASME accredited, certified elevator safety inspector. The acceptance report shall be submitted to the COR.
3. Submit to the COR the schedule and procedures for maintaining equipment. Indicate the day or days of the week and total hours required for maintenance. A report shall be submitted to the COR monthly indicating the type of maintenance conducted, hours used, and any repairs made to the elevator(s).
4. The Contractor shall be responsible for enforcing the maintenance procedures as per VA and manufacturers recommendations and requirements.
5. During temporary use of elevator(s) all repairs, equipment replacement and cost of maintenance shall be the responsibility of the Contractor.
6. Personnel for operating elevator(s) shall not be provided by the Department of Veterans Affairs.
7. Contractor shall cover and provide maximum protection of the entire elevator(s) installation.
8. The Contractor shall arrange for the elevator company to perform operation of the elevator(s) so that an ASME accredited, certified elevator safety inspector can evaluate the equipment. The Contractor shall be responsible for any costs of the elevator company.
9. All elevator(s) parts worn or damaged during temporary use shall be removed and replaced with new parts at the contractor’s expense. This shall be determined by an ASME accredited certified elevator safety inspector after temporary use and before acceptance by the Government. Submit report to the COR for approval.

10. Elevator shall be tested as required by the testing section of the elevator(s) specifications before acceptance by the Department of Veterans Affairs. The Contractor shall be responsible for all cost associated with testing and inspection.

1.17 TEMPORARY TOILETS

A. Provide where directed, (for use of all Contractor's workers) ample temporary sanitary toilet accommodations with suitable sewer and water connections; or, when approved by COR, provide suitable dry closets where directed. Keep such places clean and free from flies, and all connections and appliances connected therewith are to be removed prior to completion of contract, and premises left perfectly clean.

A*. Contractor may have for use of Contractor's workers such toilet accommodations as may be assigned to Contractor by Raymond G. Murphy VA Medical Center. Contractor shall keep such places clean and be responsible for any damage done thereto by Contractor's workers. Failure to maintain satisfactory condition in toilets will deprive Contractor of the privilege to use such toilets.

1.18 AVAILABILITY AND USE OF UTILITY SERVICES

A. The Government shall make all reasonably required amounts of utilities available to the Contractor from existing outlets and supplies, as specified in the contract. The amount to be paid by the Contractor for chargeable electrical services shall be the prevailing rates charged to the Government. The Contractor shall carefully conserve any utilities furnished without charge.

B. The Contractor, at Contractor's expense and in a workmanlike manner, in compliance with code and as satisfactory to the Contracting Officer, shall install and maintain all necessary temporary connections and distribution lines, and all meters required to measure the amount of electricity used for the purpose of determining charges. Before final acceptance of the work by the Government, the Contractor shall remove all the temporary connections, distribution lines, meters, and associated paraphernalia and repair restore the infrastructure as required.

C. Contractor shall install meters at Contractor's expense and furnish the Medical Center a monthly record of the Contractor's usage of electricity as hereinafter specified.

D. Heat: Furnish temporary heat necessary to prevent injury to work and materials through dampness and cold. Use of open salamanders or any temporary heating devices which may be fire hazards or may smoke and damage finished work, will not be permitted. Maintain minimum temperatures as specified for various materials:
   1. Obtain heat by connecting to Raymond G. Murphy VA Medical Center heating distribution system.
      a. Steam is available at no cost to Contractor.

E. Electricity (for Construction and Testing): Furnish all temporary electric services.
   1. Obtain electricity by connecting to the Raymond G. Murphy VA Medical Center electrical distribution system. The Contractor shall meter and pay for electricity required for electric cranes and hoisting devices, electrical welding devices and any electrical heating devices providing temporary heat. Electricity for all other uses is available at no cost to the Contractor.

F. Water (for Construction and Testing): Furnish temporary water service.
   1. Obtain water by connecting to the Raymond G. Murphy VA Medical Center water distribution system. Provide reduced pressure backflow preventer at each connection as per code. Water is available at no cost to the Contractor.
   2. Maintain connections, pipe, fittings and fixtures and conserve water-use so none is wasted. Failure to stop leakage or other wastes will be cause for revocation (at COR’s discretion) of use of water from Raymond G. Murphy VA Medical Center system.

G. Fuel: Natural and LP gas and burner fuel oil required for boiler cleaning, normal initial boiler-burner setup and adjusting, and for performing the specified boiler tests will be furnished by the Government. Fuel required for prolonged boiler-burner setup, adjustments, or modifications due to improper design or operation of boiler, burner, or control devices shall be furnished and paid by the Contractor at Contractor's expense.

1.19 NEW TELEPHONE EQUIPMENT

A. The contractor shall coordinate with the work of installation of telephone equipment by others. This work shall be completed before the building is turned over to VA.

1.20 TESTS

A. As per specification section 23 05 93 the contractor shall provide a written testing and commissioning plan complete with component level, equipment level, sub-system level and system level breakdowns. The plan will provide a schedule and a written sequence of what will be tested, how and what the expected outcome will be. This document will be submitted for approval prior to commencing work. The contractor shall document the results of the approved plan and submit for approval with the as built documentation.

B. Pre-test mechanical and electrical equipment and systems and make corrections required for proper operation of such systems before requesting final tests. Final test will not be conducted unless pre-tested.

C. Conduct final tests required in various sections of specifications in presence of an authorized representative of the Contracting Officer. Contractor shall furnish all labor, materials, equipment, instruments, and forms, to conduct and record such tests.

D. Mechanical and electrical systems shall be balanced, controlled and coordinated. A system is defined as the entire system which must be coordinated to work together during normal operation to produce results for which the system is designed. For example, air conditioning supply air is only one part of entire system which provides comfort conditions for a building. Other related components are return air, exhaust air, steam, chilled water, refrigerant, hot water, controls and electricity, etc. Another example of a system which involves several components of different disciplines is a boiler installation. Efficient and acceptable boiler operation depends upon the coordination and proper operation of fuel, combustion air, controls, steam, feedwater, condensate and other related components.

E. All related components as defined above shall be functioning when any system component is tested. Tests shall be completed within a reasonably period of time during which operating and environmental conditions remain reasonably constant and are typical of the design conditions.

F. Individual test result of any component, where required, will only be accepted when submitted with the test results of related components and of the entire system.

1.21 INSTRUCTIONS

A. Contractor shall furnish Maintenance and Operating manuals (hard copies and electronic) and verbal instructions when required by the various sections of the specifications and as hereinafter specified.

B. Manuals: Maintenance and operating manuals and one compact disc (four hard copies and one electronic copy each) for each separate piece of equipment shall be delivered to the COR coincidental with the delivery of the equipment to the job site. Manuals shall be complete, detailed guides for the maintenance and operation of equipment. They shall include complete information necessary for starting, adjusting, maintaining in continuous operation for long periods of time and dismantling and reassembling of the complete units and sub-assembly components. Manuals shall include an index covering all component parts clearly cross-referenced to diagrams and illustrations. Illustrations shall include "exploded" views showing and identifying each separate item. Emphasis shall be placed on the use of special tools and instruments. The function of each piece of equipment, component, accessory and control shall be clearly and thoroughly explained. All necessary precautions for the operation of the equipment and the reason for each precaution shall be clearly set forth. Manuals must reference the exact model, style and size of the piece of equipment and system being furnished. Manuals referencing equipment similar to but of a different model, style, and size than that furnished will not be accepted.

C. Instructions: Contractor shall provide qualified, factory-trained manufacturers' representatives to give detailed training to assigned Department of Veterans Affairs personnel in the operation and complete maintenance for each piece of equipment. All such training will be at the job site. These requirements are more specifically detailed in the various technical sections. Instructions for different items of equipment that are component parts of a complete system, shall be given in an integrated, progressive manner. All instructors for every piece of component equipment in a system shall be available until instructions for all items included in the system have been completed. This is to assure proper instruction in the operation of inter-related systems. All instruction periods shall be at such times as scheduled by the COR and shall be considered concluded only when the COR is

satisfied in regard to complete and thorough coverage. The contractor shall submit a course outline with associated material to the COR for review and approval prior to scheduling training to ensure the subject matter covers the expectations of the VA and the contractual requirements. The Department of Veterans Affairs reserves the right to request the removal of, and substitution for, any instructor who, in the opinion of the COR, does not demonstrate sufficient qualifications in accordance with requirements for instructors above.

1.22 GOVERNMENT-FURNISHED PROPERTY

A. The Government shall deliver to the Contractor, the Government-furnished property shown on the drawings.

B. Equipment furnished by Government to be installed by Contractor will be furnished to Contractor at the Raymond G. Murphy VA Medical Center.

C. Contractor shall be prepared to receive this equipment from Government and store or place such equipment not less than 90 days before Completion Date of project.

D. Storage space for equipment will be provided by the Government and the Contractor shall be prepared to unload and store such equipment therein upon its receipt at the Raymond G. Murphy VA Medical Center.

Notify Contracting Officer in writing, 60 days in advance, of date on which Contractor will be prepared to receive equipment furnished by Government. Arrangements will then be made by the Government for delivery of equipment.

1. Immediately upon delivery of equipment, Contractor shall arrange for a joint inspection thereof with a representative of the Government. At such time the Contractor shall acknowledge receipt of equipment described, make notations, and immediately furnish the Government representative with a written statement as to its condition or shortages.
2. Contractor thereafter is responsible for such equipment until such time as acceptance of contract work is made by the Government.

E. Equipment furnished by the Government will be delivered in a partially assembled (knock down) condition in accordance with existing standard commercial practices, complete with all fittings, fastenings, and appliances necessary for connections to respective services installed under contract. All fittings and appliances (i.e., couplings, ells, tees, nipples, piping, conduits, cables, and the like) necessary to

make the connection between the Government furnished equipment item and the utility stub-up shall be furnished and installed by the contractor at no additional cost to the Government.

F. Completely assemble and install the Government furnished equipment in place ready for proper operation in accordance with specifications and drawings.

G. Furnish supervision of installation of equipment at construction site by qualified factory trained technicians regularly employed by the equipment manufacturer.

1.23 RELOCATED EQUIPMENT

A. Contractor shall disconnect, dismantle as necessary, remove and reinstall in new location, all existing equipment or items indicated by symbol "R" or otherwise shown to be relocated by the Contractor.

B. Perform relocation of such equipment or items at such times and in such a manner as directed by the COR.

C. Suitably cap existing service lines, such as steam, condensate return, water, drain, gas, air, vacuum and/or electrical, at the main whenever such lines are disconnected from equipment to be relocated. Remove abandoned lines in finished areas and cap as specified herein before under paragraph "Abandoned Lines".

D. Provide all mechanical and electrical service connections, fittings, fastenings and any other materials necessary for assembly and installation of relocated equipment; and leave such equipment in proper operating condition.

E. All service lines such as noted above for relocated equipment shall be in place at point of relocation ready for use before any existing equipment is disconnected. Make relocated existing equipment ready for operation or use immediately after reinstallation.

1.24 CONSTRUCTION SIGN

A. Provide Interior Construction Sign where directed by the COR.

1.25 SAFTEY RECORD

A. Post the number of accident free days on a daily basis.

1.26 PHOTOGRAPHIC DOCUMENTATION

A. During the construction period through completion, provide photographic documentation of construction progress and at selected milestones including electronic indexing, navigation, storage and remote access to the documentation, as per these specifications

B. Photographic documentation elements:

1. Each digital image shall be taken with a professional grade camera with minimum size of 6 megapixels (MP) capable of producing 200x250mm (8 x 10 inch) prints with a minimum of 2272 x 1704 pixels and 400x500mm (16 x 20 inch) prints with a minimum 2592 x 1944 pixels.
2. Indexing and navigation system shall utilize actual AUTOCAD construction drawings, making such drawings interactive on an on-line interface. For all documentation referenced herein, indexing and navigation must be organized by both time (date-stamped) and location throughout the project.
3. Documentation shall combine indexing and navigation system with inspection-grade digital photography designed to capture actual conditions throughout construction and at critical milestones. Documentation shall be accessible on-line through use of an internet connection. Documentation shall allow for secure multiple-user access, simultaneously, on-line.
4. Before construction, the building pad, adjacent streets, roadways, parkways, driveways, curbs, sidewalks, landscaping, adjacent utilities and adjacent structures surrounding the building pad and site shall be documented. Overlapping photographic techniques shall be used to ensure maximum coverage. Indexing and navigation accomplished through interactive architectural drawings. If site work or pad preparation is extensive, this documentation may be required immediately before construction and at several pre-determined intervals before building work commences.
5. Construction progress for all trades shall be tracked at pre-determined intervals, but not less than once every thirty (30) calendar days (“Progressions”). Progression documentation shall track both the exterior and interior construction of the building. Exterior Progressions shall track 360 degrees around the site and each building. Interior Progressions shall track interior improvements beginning when stud work commences and continuing until Project completion.
6. As-built condition of pre-foundation utilities and site utilities shall be documented prior to pouring footers, placing concrete and/or backfilling. This process shall include all underground and

in-slab utilities within the building(s) envelope(s) and utility runs in the immediate vicinity of the building(s) envelope(s). This may also include utilities enclosed in slab-on-deck in multi-story buildings. Overlapping photographic techniques shall be used to ensure maximum coverage. Indexing and navigation accomplished through interactive site utility plans.

7. As-built conditions of mechanical, electrical, plumbing and all other systems shall be documented post-inspection and pre-insulation, sheet rock or dry wall installation. This process shall include all finished systems located in the walls and ceilings of all buildings at the Project. Overlapping photographic techniques shall be used to ensure maximum coverage. Indexing and navigation accomplished through interactive architectural drawings.
8. As-built conditions of exterior skin and elevations shall be documented with an increased concentration of digital photographs as directed by the COR in order to capture pre-determined focal points, such as waterproofing, window flashing, radiused steel work, architectural or Exterior Insulation and Finish Systems (EIFS) detailing. Overlapping photographic techniques shall be used to ensure maximum coverage. Indexing and navigation accomplished through interactive elevations or elevation details.
9. As-built finished conditions of the interior of each building including floors, ceilings and walls shall be documented at certificate of occupancy or equivalent, or just prior to occupancy, or both, as directed by the COR. Overlapping photographic techniques shall be used to ensure maximum coverage. Indexing and navigation accomplished through interactive architectural drawings.
10. Miscellaneous events that occur during any Contractor site visit, or events captured by the Department of Veterans Affairs independently, shall be dated, labeled and inserted into a Section in the navigation structure entitled “Slideshows,” allowing this information to be stored in the same “place” as the formal scope.
11. Customizable project-specific digital photographic documentation of other details or milestones. Indexing and navigation accomplished through interactive architectural plans.
12. Monthly (29 max) exterior progressions (360 degrees around the project) and slideshows (all elevations and building envelope). The

slideshows allow for the inclusion of Department of Veterans Affairs pictures, aerial photographs, and timely images which do not fit into any regular monthly photo document.

13. Weekly (21 Max) Site Progressions - Photographic documentation capturing the project at different stages of construction. These progressions shall capture underground utilities, excavation, grading, backfill, landscaping and road construction throughout the duration of the project.
14. Regular (8 max) interior progressions of all walls of the entire project to begin at time of substantial framed or as directed by the COR through to completion.
15. Detailed Exact-Built of all Slabs for all project slab pours just prior to placing concrete or as directed by the COR.
16. Detailed Interior exact built overlapping photos of the entire building to include documentation of all mechanical, electrical and plumbing systems in every wall and ceiling, to be conducted after rough-ins are complete, just prior to insulation and or drywall, or as directed by COR.
17. Finished detailed Interior exact built overlapping photos of all walls, ceilings, and floors to be scheduled by COR prior to occupancy.
18. In event a greater or lesser number of images than specified above are required by the COR, adjustment in contract price will be made in accordance with clause entitled "CHANGES" (FAR 52.243-4).

C. Images shall be taken by a commercial photographer and must show distinctly, at as large a scale as possible, all parts of work embraced in the picture.

D. Coordination of photo shoots is accomplished through COR. Contractor shall also attend construction team meetings as necessary. Contractor’s operations team shall provide regular updates regarding the status of the documentation, including photo shoots concluded, the availability of new Progressions or Exact-Builts viewable on-line and anticipated future shoot dates.

E. Contractor shall provide all on-line domain/web hosting, security measures, and redundant server back-up of the documentation.

F. Contractor shall provide technical support related to using the system or service.

G. Upon completion of the project, final copies of the documentation (the "Permanent Record") with the indexing and navigation system embedded (and active) shall be provided in an electronic media format, typically a DVD or external harddrive. Permanent Record shall have Building Information Modeling (BIM) interface capabilities. On-line access terminates upon delivery of the Permanent Record.

1.27 FINAL ELEVATION DIGITAL IMAGES

A. A minimum of four (4) images of each elevation shall be taken with a minimum 6 MP camera, by a professional photographer with different settings to allow the COR to select the image to be printed. All images are provided to the RE on a CD.

B. Photographs shall be taken upon completion, including landscaping. They shall be taken on a clear sunny day to obtain sufficient detail to show depth and to provide clear, sharp pictures. Pictures shall be 400 mm x 500 mm (16 by 20 inches), printed on regular weight paper, matte finish archival grade photographic paper and produced by a RA4 process from the digital image with a minimum 300 PPI. Identifying data shall be carried on label affixed to back of photograph without damage to photograph and shall be similar to that provided for final construction photographs.

C. Furnish six (6) 400 mm x 500 mm (16 by 20 inch) color prints of the following buildings constructed under this project (elevations as selected by the RE from the images taken above). Photographs shall be artistically composed showing full front elevations. All images shall become property of the Government. Each of the selected six prints shall be place in a frame with a minimum of 2 inches of appropriate matting as a border. Provide a selection of a minimum of 3 different frames from which the SRE will select one style to frame all six prints. Photographs with frames shall be delivered to the COR in boxes suitable for shipping.

1. Hospital Building No. 41 Elevator Lobby Area and Building No. 41 machine room.

1.28 HISTORIC PRESERVATION

A. Where the Contractor or any of the Contractor's employees, prior to, or during the construction work, are advised of or discover any possible archeological, historical and/or cultural resources, the Contractor

shall immediately notify the COR verbally, and then with a written follow up.

EXECUTIVE SUMMARY

MEC^X documented asbestos-containing materials (ACM) within select structures at the Raymond G. Murphy Veterans Administration Medical Center (VAMC) located at 1501 San Pedro SE in Albuquerque, New Mexico. MEC^X identified the asbestos-containing materials as the result of surveys completed October 2015 in Buildings 10, 10A, 41, 42, 43, 43A, 45, 46, 49, 49A, 50, 51, 52, 53, 54, 55, 56, 64, 66, 67, 67A, 94, T3, T15C, T15D, T51, T60, T71, T72, T73, and T74. MEC^X designed this Operations and Maintenance (O&M) Program for ACM to provide a management system and standard operating procedures for personnel and contractors at the Raymond G. Murphy VAMC who may encounter asbestos-containing building materials. The O&M Plan provides detailed work practices and management guidelines to assist personnel and contractors in safely controlling the hazards from asbestos-containing materials and to comply with local, state, and federal regulations on asbestos.

MEC^X surveyed the above mentioned buildings located on the Raymond G. Murphy VAMC campus between September and October of 2015. Altec Testing & Engineering, Inc. (Altec) performed an asbestos survey dated November 9-13, 2009; covering buildings 1, 1-Annex, 2, 3, 4, 5, 6, 8, 9, 10, 11, 12, 13, 14, 15, 18, 32, 33, 39, 57, 58, 60, 61, 62, 63, 65, T35, T35A, T38A, T38B, T46 & T59. Altec additionally generated an Asbestos-Containing Materials Operation & Maintenance (O&M) Plan for the buildings relating to their survey. Appendix F contains a copy of the Altec Asbestos Survey and O&M report.

1.0 INTRODUCTION

The United States Environmental Protection Agency (USEPA) published a guidance document in July 1990, entitled, "Managing Asbestos in Place: A Building Owner's Guide to Operations and Maintenance Programs for Asbestos-Containing Materials." The document's purpose is to assist building owners in identifying and enacting appropriate asbestos controls and abatement activities within their building(s) in an on-going effort to prevent asbestos exposure to building occupants, maintenance personnel and renovation contractors. The document also attempts to place the "potential hazard and risk of asbestos exposure in proper perspective." Listed within the document are the following facts:

- "Although asbestos is hazardous, the risk of asbestos-related disease depends upon exposure to airborne asbestos fibers."
- "Based upon available data, the average airborne asbestos levels in buildings seem to be very low. Accordingly, the health risk to most building occupants also appears to be very low."

The Agency derived these facts from a 1987 USEPA study of the air quality in a segment of Federal buildings as the air quality pertains to asbestos. It concluded that "most building occupants (i.e., those unlikely to disturb asbestos-containing building materials) appear to face only a very slight risk, if any, of developing an asbestos-related disease."

Damage or disturbance to asbestos-containing materials can result in elevated asbestos fiber concentrations and a potential health risk to building occupants.

The damage or disturbance potential is dependent on several factors, namely material condition, disturbance potential and material accessibility.

Controlling these factors and the resultant minimal health risk from implementing these controls, is the ultimate goal of an asbestos management program. The USEPA has instituted the following requirements and recommendations as a method to control the factors discussed above:

- The USEPA requires asbestos removal during building renovation activities if asbestos-containing materials will be impacted in order to prevent significant public exposure to airborne asbestos fibers; and
- The USEPA recommends in-place management programs whenever asbestos-containing material is discovered, in an effort to minimize exposure of building occupants to asbestos fibers. (40 CFR Part 61, Subpart M)

The policies outlined in the USEPA Guidance Document are the basis with which MEC^X developed this asbestos management plan for the Raymond G. Murphy VAMC. These practices include:

- Performing asbestos removal or disturbance activities by qualified, trained and licensed asbestos professionals; and
- Training property management company staff. Appropriate employees should be trained in Asbestos Hazard Awareness to perform proper in-place building management functions.

This document serves as the Asbestos Management Program for the Raymond G. Murphy VAMC and establishes the organizational structure, procedures and guidance policies to be employed by property managers and trades people who are involved with asbestos-related projects. The program incorporates a comprehensive strategy to ensure that building maintenance, repair, renovation and alteration projects are performed in such a manner as to minimize or eliminate airborne asbestos entrainment within the building environment.

Thorough, concise, up-to-date documentation will be maintained by the designated asbestos program manager.

The Asbestos Management Plan addresses the following areas:

- Asbestos Management Program Organization;
- Asbestos Management Goals;
- Asbestos-Containing Materials Evaluation;
- Asbestos Air Monitoring Protocol;
- Communications to Occupants in Occupied areas Which Contain Asbestos;
- Complete Operations and Maintenance Program For Managing Asbestos in Place; and,
- Record Keeping Responsibilities and Requirements.

1.1 ASBESTOS MANAGEMENT GOAL

The goal of the asbestos management plan is to minimize the exposure of building occupants, employees, and contractors to asbestos through accidental exposure by implementing a policy of identification, inspection, control, maintenance and handling of asbestos.

1.2 DISCLAIMER

MEC^X Houston, Texas, developed this O&M Program for ACM specifically for the Raymond G. Murphy VAMC, Albuquerque, New Mexico. This document shall not be used or relied upon by any entity other than their employees, maintenance personnel and contractors performing work at the Raymond G. Murphy VAMC.

This document contains information and advice based on expert opinion and review. However, the information is not a substitute for professional advice regarding the use of this information in the management of asbestos-containing materials in facilities; and the adherence to applicable law, guidance, regulations, practices and procedures. The user of this document waives and releases MEC^X from any and all claims, demands and causes of action for any injury to individuals or property and for any and all financial loss or economic damages sustained by or arising from the user's use of or reliance on this document. Use of this document does not relieve the user from complying with all applicable laws and regulations.

2.0 IDENTIFIED ASBESTOS CONTAINING MATERIAL

This O&M Plan contains the results of limited surveys asbestos containing materials (ACM) completed within select buildings of the Raymond G. Murphy Veterans Administration Medical Center (VAMC) located at 1501 San Pedro Drive SE, Albuquerque, NM 87108 (the Site).

Raymond G. Murphy VAMC retained MEC^X, Inc. (MEC^X) to complete this activity accordance with VA Medical Center Contract GS-10F-0328R Order Number VA256-14-F-0733 awarded December 4, 2013.

MEC^X's representative, Mr. Matthew Haak, a Texas Department of State Health Services (TDSHS) licensed Individual Asbestos Consultant (TDSHS License 10-5791) and James Murray, a TDSHS licensed Individual Asbestos Consultant (TDSHS License 10-5776) completed the surveys in October 2015.

The objective of the asbestos surveys was to perform an inspection sufficient to determine the presence, condition, location and approximate quantity of ACM within specified structures in accordance with the Albuquerque - Bernalillo County Air Quality Control Board (20.11.20.22), United States Environmental Protection Agency (U.S. EPA) National Emission Standards for Hazardous Air Pollutants (NESHAP) (40 CFR Part 61, Subpart M) regulations and Occupational Safety & Health Administration (OSHA) (29 CFR 1926.1101) worker protection regulations.

Prior to performing sampling, MEC^X completed an in-depth review of asbestos documentation provided by the Raymond G. Murphy VAMC. In accordance with the SOW, MEC^X utilized previously completed building surveys to the fullest extent possible. Prior to conducting the survey, MEC^X reviewed records of previous surveys and abatement projects and MEC^X verified this information and incorporated it into the current survey. MEC^X did not resample previously sampled and/or confirmed ACM in all cases, but MEC^X visually assessed these areas for condition, quantity and location. MEC^X did not resample previously sampled suspect materials that were determined in the prior survey to not be asbestos containing. Preexisting survey reports can be found in Appendix F of this O&M Plan.

Detailed diagrams depicting the location and quantity of ACM are presented within individual survey reports that are included within the appendices of this report.

2.1 BUILDING 41 ASBESTOS-CONTAINING MATERIALS

Friable ACM

- None

Non-Friable ACM

- Chilled Water Supply Insulation Mastic/Mastic
- Chilled Water Return Insulation Mastic/Mastic
- Chilled Water Mastic/Mastic
- Hot Water Supply Insulation Mastic/Mastic
- Hot Water Return Insulation Mastic/Mastic
- Heating Water Mastic/Mastic
- Domestic Water Insulation Mastic/Mastic at Hangar at Wall
- White Duct Insulation Mastic/Mastic in Interstitial Spaces
- White Duct Insulation Mastic/Mastic On Air Handler Unit
- Sewer Drain Mastic/Mastic in Interstitial Spaces

- Steam Insulation Mastic/Mastic

2.2 BUILDING 10 ASBESTOS-CONTAINING MATERIALS

Friable ACM

- Steam Hard Fittings & Elbows, White Powder
- White window Caulk

Non-Friable ACM

- Heating (Hot) Water Insulation Mastic/Mastic
- White Chilled Water Return Mastic/Mastic

2.3 BUILDING 10A ASBESTOS-CONTAINING MATERIALS

Friable ACM

- None

Non-Friable ACM

- None

2.4 BUILDING 42 ASBESTOS-CONTAINING MATERIALS

Friable ACM

- None

Non-Friable ACM

- Domestic Water, Insulation & Mastic/Mastic
- Generator Exhaust Insulation & Mastic/Mastic

2.5 BUILDING 43 ASBESTOS-CONTAINING MATERIALS

Friable ACM

- None

Non-Friable ACM

- Boiler Feed Water Insulation & Mastic/Mastic
- Boiler Blow Down Line Insulation & Mastic/Mastic
- Boiler Chemical Feed Line Insulation & Mastic/Mastic
- Steam Header Metals Plate Coating
- Steam Header Bleed Off
- Boiler Feed Water Insulation & Mastic/Mastic
- Boiler Economizer Panel Gasket
- White Condensate Elbow/Fitting Insulation & Mastic/Mastic
- Condensate Tank Insulation & Mastic/Mastic
- Low Pressure Steam Insulation & Mastic/Mastic
- Medium Pressure Steam Insulation & Mastic/Mastic
- White Vent Piping Insulation & Mastic/Mastic

2.6 BUILDING 43A ASBESTOS-CONTAINING MATERIALS

Friable ACM

- None

Non-Friable ACM

- None

2.7 BUILDING 45 ASBESTOS-CONTAINING MATERIALS

Friable ACM

- None

Non-Friable ACM

- None

2.8 BUILDING 46 ASBESTOS-CONTAINING MATERIALS.

Friable ACM

- None

Non-Friable ACM

- 12"x12" White Floor Tile & Black Mastic
- Residual Black Mastic Beneath Carpet Squares In Large Office Area

2.9 BUILDING 49 & 49A ASBESTOS-CONTAINING MATERIALS

Friable ACM

- None

Non-Friable ACM

- None

2.10 BUILDING 50 ASBESTOS-CONTAINING MATERIALS

Friable ACM

- None

Non-Friable ACM

- None

2.11 BUILDING 51 ASBESTOS-CONTAINING MATERIALS

Friable ACM

- None

Non-Friable ACM

- None

2.12 BUILDING 52 ASBESTOS-CONTAINING MATERIALS

Friable ACM

- None

Non-Friable ACM

- None

2.13 BUILDING 53 ASBESTOS-CONTAINING MATERIALS

Friable ACM

- None

Non-Friable ACM

- None

Non-Friable ACM

- None

2.29 BUILDING T73 ASBESTOS-CONTAINING MATERIALS

Friable ACM

- None

Non-Friable ACM

- None

3.0 CONDITION OF CONFIRMED/ASSUMED ACM

The majority of the confirmed and assumed asbestos-containing materials appeared to be in good condition at the time of the inspection. Damaged ACM or ACM that becomes damaged should be repaired or removed by a licensed asbestos abatement contractor. A licensed or Model Accreditation Program (MAP) (CFR-2011-Title40-Vol 31-Part763-Subpart E-App C) trained consultant should monitor asbestos abatement activities.

3.1 DAMAGED MATERIALS OBSERVED

- Building 41, TSI (pipe insulation mastic wrap) on mechanical chilled water supply, chilled water return, hot water supply, hot water return and domestic water insulated systems within the mechanical rooms has been documented as asbestos containing. In general, the material was intact; however, MEC^X noted areas of damaged insulation wrap. The material (mastic) was non-friable presenting a low to moderate potential for the release of airborne asbestos fibers.
- Building 10, TSI (pipe insulation mastic wrap) on the hot water insulated systems within the basement mechanical rooms has been documented as asbestos containing. In general, the material was intact; however, MEC^X noted areas of damaged insulation wrap. The material (mastic) was non-friable presenting a low to moderate potential for the release of airborne asbestos fibers.
- Building 43, TSI (pipe insulation mastic wrap) on boiler feed water, boiler blow down line, steam header bleed off, boiler condensate elbow/fitting, low pressure steam and medium pressure steam insulated systems within the boiler plant has been documented as asbestos containing. In general, the material was intact; however, MEC^X noted areas of damaged insulation wrap. The material (mastic) was non-friable presenting a low to moderate potential for the release of airborne asbestos fibers

4.0 ASBESTOS MANAGEMENT PROGRAM ORGANIZATION

4.1 ASBESTOS PROGRAM MANAGER AND FACILITY ASBESTOS PROGRAM COORDINATOR

The Raymond G. Murphy VAMC designated Asbestos Program Manager and Building Asbestos Program Coordinator is Mr. Larry Gutierrez. Mr. Gutierrez can be contacted at (505) 265-1711 Ext. 5276.

Mr. Gutierrez, as the Asbestos Program Manager, will be the final authority in decisions related to asbestos management policy, budgets for asbestos abatement projects and the ongoing O&M program, scheduling asbestos abatement activities and choosing asbestos abatement contractors and consultants.

Mr. Gutierrez, as the Facility Asbestos Program Coordinator, is the central point of communication, implementation and enforcement of the asbestos management program. Specific responsibilities of the Building Asbestos Program Coordinator shall be to maintain asbestos-related documentation; maintain documentation relevant to the asbestos O&M activities; notify building occupants of confirmed and assumed asbestos-containing material locations; coordinate and ensure the proper performance of asbestos O&M activities performed by property management employees and outside general service contractors; ensure that outside contractors are properly trained and qualified to perform O&M activities; coordinate, implement and enforce the appropriate asbestos-related training; ensure the appropriate notifications have been made for asbestos abatement projects; purchase and maintain the appropriate safety equipment for the O&M program; direct questions and requests for asbestos related information; review and update the asbestos O&M program on an annual basis or as regulatory requirements or building conditions change; communicate directly with the Environmental Program Manager to inform him/her of progress regarding asbestos abatement and O&M activities; ensure that appropriate safety equipment is purchased and maintained for the asbestos O&M program; respond to questions regarding asbestos and provide asbestos information; and ensure compliance with applicable federal, state and local regulatory requirements.

The successful implementation of this program should ensure that human health and the environment are protected, asbestos-containing materials are either maintained in good condition or replaced with non-asbestos-containing materials, accidental or uncontrolled disturbances of asbestos-containing materials are prevented or properly cleaned up and the Raymond G. Murphy VAMC complies with local, state and federal regulations.

4.2 ASBESTOS CONSULTANT

Asbestos Consultants, as necessary, provide a variety of technical support services including:

- Building Surveys and Testing of Suspect Materials;
- Abatement Design and Oversight;
- Designing and Monitoring O&M Activities Performed by Outside Contractors; and
- Air Monitoring Support.

4.3 ASBESTOS CONTRACTOR

Asbestos Contractors provide support to the Raymond G. Murphy VAMC by conducting abatement activities and responding to asbestos-related emergencies or maintenance projects involving disturbance of ACM/PACM.

Contractors are expected to conduct abatement projects in accordance with the appropriate contract technical specifications. Contractors must maintain up-to-date training certificates and state licenses. Asbestos Contractors must provide pertinent documentation to the Asbestos Program Coordinator.

4.4 PROPERTY MANAGEMENT EMPLOYEES

All employees with the potential to disturb asbestos will be notified about the presence and location of ACM/PACM. Questions regarding ACM/PACM at the facility must be directed to the Asbestos Program Coordinator.

Training will be provided to employees in accordance with this O&M plan.

4.5 OCCUPANTS

If an asbestos-related O&M activity is scheduled in an occupied area, the Asbestos Program Coordinator will notify the occupant and schedule the activity when the space can be vacated.

If an emergency asbestos O&M activity is required in an occupied area, the Asbestos Program Coordinator will explain the situation to the occupant and request the space be temporarily evacuated for the duration of the activity and subsequent abatement.

Occupants must report to the Asbestos Program Coordinator dust or debris that might come from ACM/PACM, change in ACM/PACM condition, or improper actions of building occupants relative to ACM/PACM.

4.6 OUTSIDE CONTRACTORS PERFORMING NON-ASBESTOS-RELATED JOB ACTIVITIES

The Asbestos Program Coordinator will communicate the requirements of this O&M program to outside contractors who perform job activities in areas where ACM/PACM is present.

If the ACM/PACM is damaged or disturbed, the outside contractor must stop work, limit access to the area and inform the Asbestos Program Coordinator who will determine the necessary response action.

Outside contractors performing non-asbestos-related jobs must avoid impacting ACM/PACM during their job activities.

Questions regarding ACM/PACM may be directed to the Asbestos Program Coordinator.

5.0 EDUCATION AND TRAINING

5.1 SUMMARY OF AWARENESS TRAINING

An asbestos training program plays an important role in a building's O&M program. The general goal of the training program is to inform and educate property management employees with respect to the hazards associated with ACM/PACM in a building. This will help to minimize/eliminate the release of airborne asbestos fibers and to subsequently reduce the risk of employee exposure. The major objectives of the program are to provide the participants with the ability to:

a. Identify the presence and location of ACM/PACM at the facility;
b. Recognize potentially hazardous situations and proper response to incidents involving ACM/PACM;
c. Avoid/minimize intentional/unintentional disturbance of ACM/PACM;
d. Contact appropriate personnel and follow established procedures when asbestos related concerns or emergency situations arise; and
e. Determine when suspect materials should be sampled prior to activities that may disturb ACM/PACM.
f. Understand housekeeping requirements for ACM/PACM.
g. Understand potential health effects of asbestos.

The training program should meet AHERA requirements set forth in 40 CFR 763.92 (a) and will last approximately 2 hours.

6.0 PERSONAL PROTECTION AND WORK PRACTICE CONTROL TRAINING

The Raymond G. Murphy VAMC asbestos O&M program prohibits employees from performing asbestos operations and maintenance work activities that may involve disturbance of ACM/PACM; therefore, personal protection and O&M work practice training is not required. A licensed asbestos abatement contractor must perform work that may impact ACM/PACM.

7.0 RESPIRATORY PROTECTION PROGRAM

The Raymond G. Murphy VAMC asbestos O&M program prohibits employees from performing asbestos operations and maintenance work activities that may involve the disturbance of ACM/PACM; therefore, respiratory protection and personal protective equipment is not required. A licensed asbestos abatement contractor must perform work that may impact ACM/PACM.

8.0 MEDICAL SURVEILLANCE PROGRAM

The Raymond G. Murphy VAMC O&M program prohibits employees from performing asbestos operations and maintenance work activities that may involve the disturbance of ACM/PACM; therefore, a medical surveillance program is not required. A licensed asbestos abatement contractor must perform work that may impact ACM/PACM.

9.0 WORK CONTROLS AND PRACTICES

9.1 INTRODUCTION

The work place controls and practices that have been established in this O&M program apply to employees and non-asbestos abatement contractors working at the Raymond G. Murphy VAMC.

The work place controls and practices that have been developed are based on the job activity conducted and the potential for fiber release resulting from the activity. Work place controls and practices are divided into four Classes. Class 4 activity represents the lowest potential for fiber release. Class 1 represents the highest potential for fiber release. (29 CFR 1926.1101(e)(1))

Job Activity	Description
Class I	Class I asbestos work means activities involving the removal of TSI and surfacing ACM and PACM.
Class II	Class II asbestos work means activities involving the removal of ACM which is not thermal system insulation or surfacing material. This includes, but is not limited to, the removal of asbestos-containing wallboard, floor tile and sheeting, roofing and siding shingles, and construction mastics.
Class III	Class III asbestos work means repair and maintenance operations, where "ACM", including TSI and surfacing ACM and PACM, is likely to be disturbed.
Class IV	Class IV asbestos work means maintenance and custodial activities during which employees contact but do not disturb ACM or PACM and activities to clean up dust, waste and debris resulting from Class I, II, and III activities.

Employees and outside non-asbestos abatement contractors are prohibited from conducting Class 2 or Class 3 or Class 4 activities. Activities which include drilling, cutting, sanding abrading or otherwise disturbing ACM/PACM, must be performed by licensed asbestos abatement contractors and monitored by a state licensed or MAP trained Asbestos Consultant.
Class 1 activity must only be performed by employees trained in accordance with this O & M program.

9.2 PROHIBITED ACTIVITIES

In addition to those tasks which are outside the scope of this O&M program, the following activities are generally prohibited for facility employees, occupants and outside service contractors. It is important that employees and outside contractors not violate these prohibitions to insure a safe working environment for building occupants and employees. Contact the Asbestos Program Coordinator whenever you have questions about whether a work activity is or is not prohibited.

a. Do not impact ACM/PACM.

b. Do not damage ACM/PACM or allow it to become damaged.

c. Do not attach items to asbestos-containing materials.

d. Do not drill, sand, saw, cut, core or otherwise impact ACM/PACM.

e. Do not dry brush or sweep ACM/PACM.

f. Do not place equipment, furniture or other objects near enough to ACM/PACM so that ACM/PACM might become damaged.

g. Do not use a regular vacuum cleaner to clean asbestos debris.

h. Do not impact asbestos.

i. Do not use ACM/PACM to replace or repair ACM/PACM.

j. No buffing where ACM/PACM is present.

9.3 EMERGENCY PROCEDURES

a. In the event of an asbestos related emergency, accidental or uncontrolled disturbance or release of asbestos from ACM/PACM at Raymond G. Murphy VAMC the following procedures apply. The intent of these procedures is to minimize further release of airborne asbestos fibers by isolation of the area until the Asbestos Program Coordinator obtains a qualified contractor to clean-up and repair the damage.

b. Facility employees or outside contractors who cause or observe damage or disturbance to ACM/PACM should (Class 1 Activity):

   i. Avoid further disturbance of the ACM/PACM.

   ii. Limit access to the area.

   iii. Contact the Asbestos Program Coordinator.

   iv. Complete a "Report of Damaged Asbestos Containing Material" (Form M-1 found in Appendix B).

c. In response to a report of an asbestos-related emergency, accidental or uncontrolled disturbance or release of asbestos from ACM/PACM, the Asbestos Program Coordinator shall:

   i. Obtain a properly qualified asbestos contracted O&M worker or abatement contractor to respond to the hazard.

d. Facility employees will have access to documentation relevant to asbestos-related emergencies in their work areas.

10.0 WORK ACTIVITIES

10.1 SCOPE OF OPERATIONS AND MAINTENANCE WORK ACTIVITIES

a. Only outside contractors who are properly qualified and authorized may conduct Class 2 and Class 3 O&M asbestos activities.

b. Each work activity is assigned a level of protection based on the job activity class and the potential for exposure to asbestos. Work activities not addressed will be assigned a protective level on a case-by-case basis by the Asbestos Program Coordinator. Assignment of protective levels may be revised based on the results of air monitoring data.

c. The general scope of O&M activities conducted by outside contractors may include:

   i. Accessing areas where ACM/PACM is present to conduct routine job activities.
   ii. Performing periodic surveillance of known ACM/PACM.

d. Notifying the Asbestos Program Coordinator of the following:
   i. Changes in ACM/PACM Condition,
   ii. Activities causing or potentially causing damage or disturbance to ACM/PACM,
   iii. Emergency situations involving ACM/PACM
   iv. Situations that would potentially cause the release of airborne asbestos fibers.

e. Responding to emergencies involving ACM/PACM by:
   i. Restricting access to the area,
   ii. Modifying air handling system and creating barriers to prevent the release of airborne asbestos to other areas of the building (if applicable),
   iii. Notifying the Asbestos Program Coordinator of the emergency situation.
   iv. Performance of routine or emergency small-scale, short-duration asbestos work that may disturb minor amounts of ACM/PACM is not permitted by facility employees.

f. Property management will utilize properly qualified contractors to conduct scheduled or emergency asbestos-related jobs.

10.2 SAFETY EQUIPMENT

a. An inventory of safety equipment may be maintained and secured in a designated equipment storage area. This safety equipment may be used by trained O&M employees during the performance of routine or emergency asbestos-related O&M job activities that may result in the disturbance of ACM/PACM.

b. The recommended equipment necessary to implement this O&M Program is included in Section 11.

c. Only equipment which has been approved for asbestos-related activities by the Asbestos Program Coordinator may be purchased for this O&M program.

d. Because safety equipment used for asbestos-related activities may be stored with internal contamination and because the equipment must be available for emergency activities, the storage and use of this equipment must be strictly controlled.

e. Asbestos safety equipment may only be used by trained facility workers and only for asbestos-related activities.

f. The Asbestos Program Coordinator or his/her designate will be responsible for purchasing, storing, maintaining and controlling the use of asbestos safety equipment.

11.0 ASBESTOS O&M EMERGENCY KIT

The following equipment and expendable supplies shall be maintained by the Asbestos Program Coordinator as part of the O&M job kit. Specific equipment and supplies that are required to perform each safety procedure described in this program are referenced in Section H, Number 3. Asbestos control and safety equipment will be secured and stored in the designated O&M equipment area.

1. Asbestos danger signs
2. Polyethylene sheeting (6-mil thickness)
3. Water in an airless sprayer (mended water is recommended)
4. Duct tape
5. Asbestos danger signs (required OSHA wording)(29 CFR 1910.100(j)(4)
6. Barrier tape
7. Wetting agent (surfactant)

12.0 SAFE WORK PROCEDURES

12.1 INTRODUCTION

This section contains general and specific work procedures for conducting small-scale short-duration asbestos-related O&M job activities(29 CFR Parts 1910, 1915, and 1926). These work procedures have been developed in accordance with current federal, state and local regulatory requirements and recommendations. The work procedures will be periodically reviewed and updated in accordance with regulatory changes or updates in state of the art work practices.

12.2 GENERAL AND SPECIFIC ASBESTOS-RELATED WORK PROCEDURES

It is not possible to completely identify all employee work activities or situations where asbestos might be impacted or disturbed. However no employee or non-asbestos abatement contractor may intentionally disturb ACM/PACM.

Asbestos work procedures should be performed only by properly trained and authorized outside contractors. Detailed procedures and special equipment must be utilized for work involving ACM/PACM. Contractor's must read written procedures thoroughly before proceeding and should not hesitate to ask questions of the Asbestos Program Coordinator when necessary. Modifications or new procedures shall be prepared and issued as necessary.

All asbestos work must be performed by a licensed asbestos abatement contractor and monitored by a state licensed or MAP trained asbestos consultant.

13.0 PROCEDURES INVOLVING RESILIENT ASBESTOS FLOORING

13.1 MAINTENANCE OF RESILIENT ASBESTOS FLOORING

The following Procedures are "Recommended Interim Guidelines for Stripping/Sanding Asbestos-Containing Floors" as presented by the U.S.E.P.A.

1. Avoid stripping floors. Stripping of resilient asbestos floors should be done as infrequently as possible, perhaps once or twice or less per year depending on circumstances. When this operation is necessary, it must be performed by personnel trained in proper work procedures.
2. The floor should be kept wet during the stripping operation. DO NOT perform dry stripping. Sanding is prohibited.
3. Prior to machine operation, an emulsion of chemical stripper in water is commonly applied to the floor with a mop to soften the wax or finish coat. After stripping and before application of the new wax, the floor should be thoroughly cleaned, while wet.
4. Run the machine at a slow speed (less than 300-rpm), using the least abrasive pad possible to strip wax or finish coat from asbestos-containing floors.
5. Do not over-strip floors. Stop stripping when the old surface coat is removed. Do not operate a floor machine with an abrasive pad on unwaxed or unfinished floors.

14.0 ACM/PACM WASTE HANDLING

Only asbestos abatement contractors monitored by a state licensed or MAP trained asbestos consultant may handle ACM/PACM waste. (29 CFR 1926.1101)

15.0 AIR MONITORING

A state licensed or MAP trained asbestos consultant will determine air monitoring requirements whenever asbestos related work occurs. *(29 CFR 1926.1101)*

16.0 PERIODIC SURVEILLANCE

Following are the steps to be followed for periodic surveillance: (29 CFR 1926.1101)

1. Periodic surveillance is a means to determine if the condition of ACM/PACM has changed.
2. Periodic surveillance at Raymond G. Murphy VAMC will be performed every three years.
3. Form M-2 found in Appendix B will be updated every three years by a state licensed or MAP trained consultant.

17.0 DOCUMENTATION AND RECORD KEEPING

Regulatory standards and liability issues require an employer and/or building owner to maintain records of asbestos-related activities. The Asbestos Program Coordinator is responsible for maintaining and updating documentation related to the O&M Program. Documents detailing O&M activities must be retained, including the following: (29 CFR 1926.1101)

A. Periodic Surveillance - Documentation of periodic surveillance reports delivered by the Asbestos Management Professional shall be maintained indefinitely. Copies shall be attached to the survey report to document changing ACM conditions.

B. Notification of ACM Locations or Asbestos-Related Work - Documentation including written correspondence (notices to contractors), posted signs and conversations shall be maintained indefinitely in accordance with OSHA requirements.

C. Training - Training records shall be maintained for the duration of employment plus thirty years.

D. Survey Report - A survey report, if completed and attachments shall be maintained indefinitely and updated to reflect changes in ACM condition, location or abatement activities. Data to rebut PACM will be maintained for the life of the facility.

E. Asbestos O&M Program - This written O&M program shall be maintained indefinitely or until ACM has been removed from the facility.

F. Asbestos Abatement Documentation - This Asbestos Management Professional's report documenting the safe removal and disposal of ACM will be kept indefinitely.

G. Asbestos Spills/Incident Reports - These reports along with the response from the Asbestos Management Professional will be maintained indefinitely.

18.0 PLAN CERTIFICATION

19.0 EXAMPLE NOTICE FORMS

19.1 EXAMPLE NOTICE #1 - OUTSIDE SERVICE COMPANY REPRESENTATIVE NOTICE

An asbestos Operations and Maintenance (O&M) Program has been established at the Raymond G. Murphy VAMC located in Albuquerque, New Mexico. The mere presence of Asbestos Containing Material/Presumed Asbestos Containing Material (ACM/PACM) in a building does not constitute a hazard and an O&M program aims to manage in-place asbestos. This O&M program includes precautions to avoid disturbing ACM/PACM. The program also includes safe work procedures for when small amounts of ACM/PACM must be disturbed to perform routine building operations and maintenance activities.

Your cooperation is essential for the implementation of this program. We ask that you become familiar with potential locations of ACM/PACM (a brief summary of the materials is attached) and avoid activities which may disturb them.

The O&M program is available for your review in my office. I am also available for questions or concerns you may have.

Sincerely,

Asbestos Program Coordinator

19.2 EXAMPLE NOTICE # 2 - OUTSIDE SERVICE COMPANY REPRESENTATIVE NOTICE

Asbestos-containing materials have been identified to exist within the Raymond G. Murphy VAMC. The mere presence of Asbestos Containing Material/Presumed Asbestos Containing Material (ACM/PACM) in a building does not constitute a hazard, Property management has established an Operations and Maintenance (O&M) Program to manage in-place asbestos. This O&M program includes precautions to avoid disturbing ACM/PACM. The program also includes safe work procedures for conducting work in areas where ACM/PACM is present and emergency procedures to be followed if ACM/PACM is disturbed during the performance of routine building operations and maintenance activities. ACM/PACM work must be approved by the Building Management Department.

Your cooperation is essential for the implementation of this program. We ask that you become familiar with potential locations of ACM/PACM (a brief summary of the materials is attached) and avoid activities which may disturb them. We have also established a notification/authorization system for activities which may impact ACM/PACM. If you determine that your contracted service may cause you to impact ACM/PACM, contact the Asbestos Program Coordinator prior to initiating the job to ensure the area is either free of ACM/PACM or the ACM/PACM is properly repaired to minimize the potential for disturbance. If your activities in this building will require you to disturb ACM/PACM, you must receive written authorization from the Asbestos Program Coordinator. Your activities, including the use of qualified and protected workers, must comply with applicable regulations and the O&M program.

Please return a signed copy of this letter to acknowledge your understanding of this program and your intent to comply with applicable regulations.

If you have questions regarding the potential to disturb asbestos, please contact the Asbestos Program Coordinator. The O&M program is available for your review in my office. I am also available for questions or concerns you may have.

Sincerely,

Asbestos Program Coordinator

19.3 EXAMPLE SAMPLE NOTICE #3 – OCCUPANT NOTIFICATION LETTER

During the past several years there has been much publicity regarding asbestos-related issues, creating a heightened public awareness of this potential health hazard. Asbestos-containing materials (ACM) were commonly used in building construction until the late 1970s because of their proven insulating and fireproofing properties. The building management hired an environmental consulting firm to identify ACM and Presumed Asbestos Containing Materials (PACM) in this building and a brief summary of their findings is attached.

Because the mere presence of ACM/PACM in a building does not constitute a hazard, Property management has established an Operations and Maintenance (O&M) Program to manage in-place asbestos. This O&M program includes precautions to avoid disturbing ACM/PACM. The program also includes safe work procedures for when small amounts of ACM/PACM must be disturbed to perform routine building operations and maintenance activities.

Your cooperation is essential for the implementation of this program. We ask that you become familiar with potential locations of ACM/PACM and avoid activities which may disturb them. We have also established a notification/authorization system for occupant activities which may impact ACM/PACM. This authorization/notification must be submitted to the building's Asbestos Program Coordinator for approval 30 days before the start of work.

The O&M program is available for your review in my office. I am also available for questions or concerns you may have.

Sincerely,

Asbestos Program Coordinator

1.0 INTRODUCTION

A comprehensive survey for asbestos-containing materials (ACM) was performed on thirty three (33) buildings within the New Mexico VA Health Care System (NMVAHCS) located at 1501 San Pedro SE in Albuquerque, New Mexico.

Representatives of Altec Testing & Engineering Inc. (Altec) conducted the survey on behalf of Advanced Environmental Services, Inc under the authorization of Mr. Joe Wilson. Altec is located at 6035 Fremont Street, in Riverside, California, 92504, Phone # (951) 352-6510, Fax # (951) 352-6514. The survey was conducted from November 9th-13th, 2009.

Altec conducted the survey in order to meet requirements that are compliant with the United States Environmental Protection Agency (USEPA) National Emissions Standard for Hazardous Air Pollutants (NESHAP), New Mexico Air Quality Bureau (AQB) and the New Mexico Occupational Health and Safety Bureau (OHSB) rules, regulations and guidelines for renovation/demolition.

The following buildings as specified by representatives of the NMVAHCS were included in this survey:

- Building 1 – Psychiatry
- Building 1 – Annex
- Building 2 – VCS- Recreation
- Building 3 – Psychiatry
- Building 4 - Administrative
- Building 5 - Engineering Shops
- Building 6 - Engineering Shops
- Building 8 - Engineering Administration
- Building 9 – Laundry
- Building 10 – Research (excluding North half of 1st floor and 2nd floor throughout)
- Building 11 – Research/PRRTP
- Building 12 – Research
- Building 13 – CWT Beds
- Building 14 – Research
- Building 15 – Rehabilitation
- Building 18 – Regional Counsel
- Building 32 – Gate House
- Building 33 – Engineering Shop
- Building 39 – Education Building
- Building 57 - Veterans Group
- Building 58 – EMS Pest Control
- Building 60 –
- Building 61 – Booster Pump House
- Building 62 – Well Pump House
- Building 63 – Chlorinator House
- Building 65 – Booster Pump House
- T35 – Paint Shop
- T35A – Paint Shop
- T38A – Grounds
- T38B - Grounds
- T46 - Education
- T59 – Veterans Group
- T61 – Credit Union

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

2.0 SCOPE OF WORK

The objective of this survey, as defined by the client, was to collect representative samples of suspect friable and non-friable asbestos-containing materials (ACMs) located in the buildings referenced in Section 1.0 to assess the condition of the suspect materials and to quantify the materials present. The assessment, sampling and subsequent analysis was conducted in order to identify ACMs found within the referenced subject facility.

Suspect ACMs that were found in the subject buildings were assessed, quantified, sampled and submitted for analysis for the determination of asbestos content by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory.

2.1 Inspectors

All of the Altec primary inspectors hold current EPA accreditations in Asbestos Building Inspection, Management Planning, Project Design and Abatement Supervision. Each primary inspector has over 10 years experience in asbestos building inspection and management planning. Altec's primary inspectors are also State of California Department of Occupational Safety and Health (DOSH) Certified Asbestos Consultants (CACs), a licensing/certification program that supersedes EPA's requirements for AHERA accreditation. Part of DOSH's annual re-certification process is a requirement to maintain EPA AHERA accreditation. A Certified Site Surveillance Technician (CSST), who is also EPA AHERA accredited and has 7 years experience, worked under the direction of a CAC during the survey. The inspectors may be contacted at Altec's office in Riverside, California at (909) 352-6510. The following table lists the Altec asbestos inspectors that participated in performing the survey for this facility.

Asbestos Inspector	DOSH Certificate Number	Signature
Jay A Yowell	CAC No. 97-2295	Howard Baba	CAC No. 95-1791	
Lynn Laborde	CAC No. 92-0495	Fernando Najera	CSST No. 05-3790	
2.2 Survey Description

Altec collected 1,266 (not including additional layers analyzed by the laboratory) representative bulk samples of all accessible interior suspect asbestos-containing materials. Suspect ACMs may exist in inaccessible or hidden areas of the structure that were not observed or inspected during this investigation. This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures.

A limited survey was conducted on the buildings exteriors in which 181 (not including additional layers analyzed by laboratory) representative bulk samples were collected. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

The quantification of the asbestos-containing materials is an estimate made at the time of sampling. The quantities are estimates only and should be verified by all parties, including any contractors bidding the removal to determine exact square footage's and the accessibility of the specific materials.

3.0 FINDINGS PER BUILDING

3.1 Building 1

3.1.1 Building 1 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos-containing materials identified within Building 1.

Material Description	Material Location	EPA Category	Condition	Quantity
Yellow Carpet Glue	4th Floor-Throughout	Category I Non-Friable	Good	5,000 SF
White VFT	4th Floor-Various Locations	Category I Non-Friable	Good	5,000 SF
Black Mastic	4th Floor-Various Locations (below VFT)	Category I Non-Friable	Good	5,000 SF
Yellow Mastic	4th Floor-Various Locations (below VFT)	Category I Non-Friable	Good	5,000 SF
9" Green VFT	4th Floor-Stairwell # 3	Category I Non-Friable	Good	400 SF
Plaster	4th Floor-Throughout	Category II Non-Friable	Good	6,000 SF
2'x4' White Ceiling Tile	4th Floor-Throughout	Friable	Good	5,000 SF
Drywall/Joint Compound	4th Floor-Throughout	Category II Non-Friable	Good	1,700 SF
Cream Base Cove Adhesive	4th Floor-Various Locations	Category I Non-Friable	Good	300 SF
Yellow Carpet Glue	3rd Floor-Various Location	Category I Non-Friable	Good	9,000 SF
White VFT	3rd Floor-Various Location	Category I Non-Friable	Good	9,000 SF
Black Mastic	3rd Floor-Various Locations (below VFT)	Category I Non-Friable	Good	9,000 SF
Yellow Mastic	3rd Floor-Various Locations (below VFT)	Category I Non-Friable	Good	9,000 SF
2'x4' White Ceiling Tile	3rd Floor-Throughout	Friable	Good	10,800 SF
Plaster	3rd Floor-Throughout	Category II Non-Friable	Good	13,000 SF

(Continued Building 1 – Suspect Asbestos-Containing Materials)

Material Description	**Material Location**	**EPA Category**	**Condition**	**Quantity**
Drywall/Joint Compound	3rd Floor-Throughout	Category II Non-Friable	Good	8,500 SF
Cream Base Cove Adhesive	3rd Floor-Various Locations	Category I Non-Friable	Good	300 SF
Gray Fireproofing	3rd Floor-Various Locations	Friable	Good	6,500 SF
12" White VFT	3rd Floor-Various Locations	Category I Non-Friable	Good	400 SF
Clear Mastic	3rd Floor-Various Locations (below VFT)	Category I Non-Friable	Good	400 SF
12" Cream VFT	3rd Floor-Various Locations	Category I Non-Friable	Good	400 SF
Yellow Base Cove Adhesive	3rd Floor-Various Locations	Category I Non-Friable	Good	400 SF
12" Tan VFT	3rd Floor-Various Locations	Category I Non-Friable	Good	450 SF
Yellow Carpet Glue	2nd Floor-Various Location	Category I Non-Friable	Good	15,000 SF
Gray Float	2nd Floor-Various Location	Category II Non-Friable	Good	15,000 SF
Black Mastic	2nd Floor-Various Location	Category I Non-Friable	Good	15,000 SF
Yellow Base Cove Adhesive	2nd Floor-Various Location	Category I Non-Friable	Good	600 SF
2'x4' White Ceiling Tile	2nd Floor-Throughout	Friable	Good	15,000 SF
Plaster	2nd Floor-Throughout	Category II Non-Friable	Good	25,000 SF
Drywall/Joint Compound	2nd Floor-Throughout	Category II Non-Friable	Good	42,000 SF
Gray Fireproofing	2nd Floor-Various Location	Friable	Good	6,500 SF
12" White VFT	2nd Floor-Various Location	Category I Non-Friable	Good	6,500 SF
Yellow Mastic	2nd Floor-Various Locations (below VFT)	Category I Non-Friable	Good	6,500 SF
Cream Base Cove Adhesive	2nd Floor-Various Locations	Category I Non-Friable	Good	300 SF

(Continued Building 1 – Suspect Asbestos-Containing Materials)

Material Description	**Material Location**	**EPA Category**	**Condition**	**Quantity**
2'x4' White Ceiling Tile	1st Floor-Throughout	Friable	Good	14,500 SF
Plaster	1st Floor-Throughout	Category II Non-Friable	Good	40,000 SF
Residual 1'x1' Ceiling Tile & Brown Adhesive	1st Floor-Various Locations (above drop ceiling)	Friable	Good	900 SF
Drywall/Joint Compound	1st Floor-Throughout	Category II Non-Friable	Good	60,000 SF
Green Carpet Adhesive	1st Floor-Various Locations	Category I Non-Friable	Good	3,000 SF
White Floor Coating	1st Floor-Various Locations	Category II Non-Friable	Good	3,000 SF
Yellow Base Cove Adhesive	1st Floor-Various Locations	Category I Non-Friable	Good	600 SF
Cream Carpet Glue & Float	1st Floor-Various Locations	Category I Non-Friable	Good	3,500 SF
Yellow Carpet Glue	1st Floor-Various Locations	Category I Non-Friable	Good	14,700 SF
VFT	1st Floor-Various Locations (Below Carpet)	Category I Non-Friable	Good	14,700 SF
Yellow Tile Mastic	1st Floor-Various Locations (Below Carpet)	Category I Non-Friable	Good	14,700 SF
12" Pink VFT	1st Floor-Various Locations	Category I Non-Friable	Good	500 SF
2'x2' Smooth White Ceiling Tile	1st Floor-Throughout	Friable	Good	2,500 SF
12" White VFT	1st Floor-Various Locations	Category I Non-Friable	Good	600 SF
Cream Base Cove Adhesive	1st Floor-Various Locations	Category I Non-Friable	Good	300 SF
1'x1' Ceiling Tile	1st Floor-Lobby Areas	Friable	Good	1,200 SF
Black Ceiling Tile Adhesive	1st Floor-Lobby Areas	Category I Non-Friable	Good	1,200 SF
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	Not Quantified

(Continued Building 1 – Suspect Asbestos-Containing Materials)

Material Description	**Material Location**	**EPA Category**	**Condition**	**Quantity**
Exterior Window Putty	Windows	Category I Non-Friable	Good	Not Quantified
2'x4' White Ceiling Tile	Basement-Various-Locations	Friable	Good	10,000 SF
Plaster	Basement-Throughout	Category II Non-Friable	Good	17,500 SF
Drywall/Joint Compound	Basement-Throughout	Category II Non-Friable	Good	35,000 SF
Cream Base Cove Adhesive	Basement-Various Locations	Category I Non-Friable	Good	300 SF
12" Cream VFT (Streaks)	Basement-Various Locations	Category I Non-Friable	Good	6,000 SF
Yellow Mastic	Basement-Various Locations	Category I Non-Friable	Good	6,000 SF
Black Mastic	Basement-Various Locations	Category I Non-Friable	Good	6,000 SF
12" Tan VFT (Speckled)	Basement-Various Locations	Category I Non-Friable	Good	330 SF
12" Rust VFT (Speckled)	Basement-Various Locations	Category I Non-Friable	Good	720 SF
12" White VFT (Tan Speckled)	Basement-Various Locations	Category I Non-Friable	Good	800 SF
Yellow Base Cove Adhesive	Basement-Various Locations	Category I Non-Friable	Good	450 SF
Yellow Carpet Glue	Basement-Various Locations	Category I Non-Friable	Good	15,000 SF
Residual Black Base Cove Adh.	Basement-Various Locations	Category I Non-Friable	Good	40 SF
Residual Brown Base Cove Adh.	Basement-Various Locations	Category I Non-Friable	Good	40 SF
4" Cold Water Pipe Cloth/TSI	Crawl Space	Friable	Good	400 LF
4" Hot Water Pipe Cloth/TSI	Crawl Space	Friable	Good	400 LF
6" Hot Water Pipe Cloth/TSI	Crawl Space	Friable	Good	400 LF

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities,

materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

No access was provided to rooms 407C and 308. Flooring material is assumed to be present below hearing booths in rooms A026 and A024.

3.1.2 Building 1 - Samples Reported as Asbestos-Containing

Sample No.	Material Description	Sample Location	Friability	Condition	% Asbestos
506,507	Green 9" VFT & Black Mastic	4th Floor Stairwell # 3	Non-Friable	Good	3-5% Chrysotile
752	VFT below 12" White VFT with Tan Speckles	Basement	Non-Friable	Good	3% Chrysotile
766	Yellow Carpet Glue	Basement A017	Non-Friable	Good	3% Chrysotile

3.1.3 Building 1 - Asbestos-Containing Materials Inventory Summary

Material	Category	Estimated Quantity
Green 9" VFT & Black Mastic	Category I Non-Friable	40 SF
VFT below 12" White VFT with Tan Speckles	Category I Non-Friable	800 SF
Yellow Carpet Glue	Category I Non-Friable	250 SF

The quantities of asbestos-containing materials are estimates made at the time of sampling and should be used by the NMVAHCS for limited budgeting purposes only. These quantities are estimates only and should be verified by all parties, including any contractors bidding the removal to determine exact square footage's and the accessibility of the specific materials. No mechanical as–build drawings were provided to formulate the estimate of TSI. The TSI quantities noted in the tables are total linear feet regardless of the outside diameter (OD) or systems to which it is supporting.

The specific locations of all TSI was not determined due to significant restrictions, which are as follows: (1) piping enclosed inside walls, (2) ceiling panel support/tie wires, (3) firewall extensions between floors throughout the plenums, and (4) the need to avoid creating/releasing dust inside the hospital.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes.

All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.2 Building 1 Annex

3.2.1 Building 1 - Annex Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	Material Location	EPA Category	Condition	Quantity
Yellow Carpet Glue	Opportunities Room	Category I Non-Friable	Good	400 SF
2'x4' White Ceiling Tile	Opportunities Room	Friable	Good	400 SF
Plaster	Opportunities Room	Category II Non-Friable	Good	1,200 SF
Wall Texture	Opportunities Room	Category II Non-Friable	Good	640 SF
Plaster	Education Annex	Category II Non-Friable	Good	2,400 SF
Wall Texture	Education Annex	Category II Non-Friable	Good	1,300 SF
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	4,000 SF
Exterior Window Putty	Windows	Category I Non-Friable	Good	12 Windows

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.2.2 Building 1 Annex - Samples Reported as Asbestos-Containing

None of the samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory were reported to contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.3 Building 2

3.3.1 Building 2 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	**Material Location**	**EPA Category**	**Condition**	**Quantity**
2'x4' White Ceiling Tile (Speckled)	2nd Floor- Various Locations	Friable	Good	1,000 SF
Plaster	2nd Floor- Various Locations	Category II Non-Friable	Good	9,500 SF
Yellow Carpet Glue	2nd Floor- Various Locations	Category I Non-Friable	Good	1,000 SF
9" Red VFT	2nd Floor- Various Locations (below carpet)	Category I Non-Friable	Good	1,000 SF
Black Mastic	2nd Floor- Various Locations (below carpet)	Category I Non-Friable	Good	1,000 SF
Yellow Base Cove Adhesive	2nd Floor- Various Locations	Category I Non-Friable	Good	50 SF
1'x1' White Ceiling Tile	Balcony Area & above Recreation Area	Friable	Good	8,000 SF
Brown Ceiling Tile Adhesive	Balcony Area & above Recreation Area	Category I Non-Friable	Good	8,000 SF
9" Black VFT	2nd Floor- Stairwell Landing	Category I Non-Friable	Good	40 SF
Clear Base Cove Adhesive	1st Floor- Stairwell Landing	Category I Non-Friable	Good	100 SF
12" White VFT (Gray Speckled)	1st Floor-Various Locations	Category I Non-Friable	Good	8,000 SF
Yellow Adhesive	1st Floor-Various Locations (below VFT)	Category I Non-Friable	Good	8,000 SF

(Continued Building 2 – Suspect Asbestos-Containing Materials)

Material Description	**Material Location**	**EPA Category**	**Condition**	**Quantity**
2'x4' White Ceiling Tile	1st Floor-Various Locations	Friable	Good	8,000 SF
Plaster	1st Floor-Various Locations	Category II Non-Friable	Good	45,000 SF
12" Pink VFT	1st Floor-Various Locations	Category I Non-Friable	Good	900 SF
12" Peach VFT	1st Floor-Various Locations	Category I Non-Friable	Good	500 SF
12"x16" Decorative Ceiling Tile	1st Floor-Dinning Area (Above Drop Ceiling)	Category II Non-Friable	Good	8,000 SF
Brown Ceiling Tile Adhesive	1st Floor-Dinning Area (Above Drop Ceiling)	Category I Non-Friable	Good	8,000 SF
Drywall/Joint Compound	1st Floor-Various Locations	Category II Non-Friable	Good	45,000 SF
Wall Texture	1st Floor- Breezeway	Category II Non-Friable	Good	1,150 SF
12" Green VFT (Gray Speckled)	1st Floor-Auditorium	Category I Non-Friable	Good	2,800 SF
Vapor Barrier	1st Floor-Auditorium (below VFT)	Category I Non-Friable	Good	2,800 SF
Black Adhesive	1st Floor-Auditorium (below VFT)	Category I Non-Friable	Good	2,800 SF
Black Adhesive	1st Floor-Auditorium (below VFT)	Category I Non-Friable	Good	2,800 SF
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	Not Quantified
8" Tan Pipe Cover & TSI	Basement- Crawl Space	Friable	Good	100 LF
6" Tan Pipe Cover & TSI	Basement- Crawl Space	Friable	Good	100 LF
4" Tan Pipe Cover & TSI	Basement- Crawl Space	Friable	Good	100 LF
Plaster	Basement	Category II Non-Friable	Good	600 SF
Black Mirror Mastic	Basement Closet	Category I Non-Friable	Good	5 SF

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities,

materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

No access was provided to room 104, behind the stage and rooms 110 A&B.

3.3.2 Building 2 - Samples Reported as Asbestos-Containing

Sample No.	Material Description	Sample Location	Friability	Condition	% Asbestos
1116, 1124-25 1133-34	9" Red & 9" Black VFT	2nd Floor	Non-Friable	Good	3-4% Chrysotile
1152, 1154, 1156, 1170, 1201	Black & Yellow Adhesive Below Various VFT	Throughout 1st floor hallway & dining room	Non-Friable	Good	2-15% Chrysotile

3.3.3 Building 2 - Asbestos-Containing Materials Inventory Summary

Material	Category	Estimated Quantity
9" Red & 9" Black VFT	Category I Non-Friable	1,400 SF
Black & Yellow Adhesive	Category I Non-Friable	10,000 SF

The quantities of asbestos-containing materials are estimates made at the time of sampling and should be used by the NMVAHCS for limited budgeting purposes only. These quantities are estimates only and should be verified by all parties, including any contractors bidding the removal to determine exact square footage's and the accessibility of the specific materials. No mechanical as–build drawings were provided to formulate the estimate of TSI. The TSI quantities noted in the tables are total linear feet regardless of the outside diameter (OD) or systems to which it is supporting.

The specific locations of all TSI was not determined due to significant restrictions, which are as follows: (1) piping enclosed inside walls, (2) ceiling panel support/tie wires, (3) firewall extensions between floors throughout the plenums, and (4) the need to avoid creating/releasing dust inside the hospital.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes.

All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.4 Building 3

3.4.1 Building 3 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	Material Location	EPA Category	Condition	Quantity
12" Cream VFT (Speckled)	Penthouse- Entrance Area	Category I Non-Friable	Good	400 SF
Yellow mastic	Penthouse- Entrance Area (Below VFT)	Category I Non-Friable	Good	400 SF
9" Dark Green VFT	Penthouse- Entrance / Cubical Area	Category I Non-Friable	Good	25 SF
Clear Mastic	Penthouse- Entrance / Cubical Area (Below VFT)	Category I Non-Friable	Good	25 SF
9" Light Green VFT	Penthouse- Cubical Area	Category I Non-Friable	Good	2,050 SF
Clear Mastic	Penthouse- Cubical Area	Category I Non-Friable	Good	2,050 SF
Plaster	Penthouse- Various Locations	Category II Non-Friable	Good	5,000 SF
2'x4' White Ceiling Tile	Penthouse- Throughout	Friable	Good	2,500 SF
Drywall/Joint Compound	Penthouse- Restroom 302	Category II Non-Friable	Good	500 SF
Gray Vibration Dampener	Penthouse- Mechanical Room	Category II Non-Friable	Good	40 SF
Gray Exterior Stucco	Penthouse- Mechanical Room	Category II Non-Friable	Good	500 SF
9" Dark Green VFT	2nd Floor- Various Locations	Category I Non-Friable	Good	300 SF
Black Mastic	2nd Floor- Various Locations	Category I Non-Friable	Good	5,000 SF
12" Peach VFT (White Speckles)	2nd Floor- Various Locations	Category I Non-Friable	Good	16,500 SF
Yellow Adhesive	2nd Floor- Various Locations	Category I Non-Friable	Good	16,500 SF

(Continued-Building 3 Suspect Asbestos-Containing Materials)

Material Description	**Material Location**	**EPA Category**	**Condition**	**Quantity**
2'x4' White Ceiling Tile	2nd Floor- Various Locations	Friable	Good	20,000 SF
Drywall/Joint Compound	2nd Floor- Various Locations	Category II Non-Friable	Good	45,000 SF
Plaster	2nd Floor- Various Locations	Category II Non-Friable	Good	25,500 SF
Yellow Base Cove Adhesive	2nd Floor- Various Locations	Category I Non-Friable	Good	600 SF
Tan Fireproofing	2nd Floor- Therapy Room 224	Friable	Good	800 SF
Yellow Carpet Glue	2nd Floor- Various Locations	Category I Non-Friable	Good	4,000 SF
12" Dark Green VFT	2nd Floor- Various Locations	Category I Non-Friable	Good	100 SF
Brown Base Cove Adhesive	2nd Floor- Various Locations	Category I Non-Friable	Good	50 SF
2'x4' White Ceiling Tile	1st Floor- Various Locations	Friable	Good	2,500 SF
Plaster	1st Floor- Various Locations	Category II Non-Friable	Good	25,500 SF
Drywall/Joint Compound	1st Floor- Various Locations	Category II Non-Friable	Good	45,000 SF
VFC (Gray Pebble)	1st Floor- Various Locations	Category II Non-Friable	Good	80 SF
Yellow Adhesive	1st Floor- Various Locations	Category I Non-Friable	Good	4,000 SF
Yellow Base Cove Adhesive	1st Floor- Various Locations	Category I Non-Friable	Good	300 SF
12" White VFT (Green Speckles)	1st Floor- Various Locations	Category I Non-Friable	Good	4,000 SF
12" Cream VFT (Speckles)	1st Floor- Various Locations	Category I Non-Friable	Good	100 SF
Black Mastic	1st Floor- Various Locations	Category I Non-Friable	Good	4,000 SF
Wall Texture	1st Floor- Various Locations	Category II Non-Friable	Good	900 SF
12" White VFT (Speckles)	1st Floor- Various Locations	Category I Non-Friable	Good	1,500 SF
12" White VFT (Gray Speckles)	1st Floor- Various Locations	Category I Non-Friable	Good	1,500 SF

(Continued-Building 3 Suspect Asbestos-Containing Materials)

Material Description	**Material Location**	**EPA Category**	**Condition**	**Quantity**
Brown Base Cove Adhesive	1st Floor- Various Locations	Category I Non-Friable	Good	300 SF
1'x1' White Ceiling Tile	1st Floor- Various Locations	Friable	Good	4,500 SF
Brown Ceiling Tile Adhesive	1st Floor- Various Locations	Category I Non-Friable	Good	4,500 SF
12" White VFT	1st Floor- Various Locations	Category I Non-Friable	Good	200 SF
12" Purple VFT	1st Floor- Various Locations	Category I Non-Friable	Good	100 SF
White Float	1st Floor- Various Locations	Category II Non-Friable	Good	100 SF
12" Pink VFT (Streak)	1st Floor- Various Locations	Category I Non-Friable	Good	4,000 SF
12" Light Pink VFT (Streak)	1st Floor- Various Locations	Category I Non-Friable	Good	2,000 SF
VFC (Gray / Blue Pebble)	1st Floor- Various Locations	Category II Non-Friable	Good	600 SF
12" Peach VFT (White Streak)	1st Floor- Various Locations	Category I Non-Friable	Good	2,000 SF
12" Light Green VFT (Black Speckled)	1st Floor- Various Locations	Category I Non-Friable	Good	1,500 SF
Cream Base Cove Adhesive	1st Floor- Various Locations	Category I Non-Friable	Good	300 SF
Yellow Carpet Glue	1st Floor- Various Locations	Category I Non-Friable	Good	280 SF
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	Not Quantified
Exterior Window Putty	Exterior Walls	Category II Non-Friable	Good	Not Quantified

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.4.2 Building 3 - Samples Reported as Asbestos-Containing

Sample No.	Material Description	Sample Location	Friability	Condition	% Asbestos
871,873, 875	12'' Cream VFT (Speck)	Penthouse	Non-Friable	Good	6-8% Chrysotile
877,879, 881	9" Dark Green VFT	Penthouse	Non-Friable	Good	5-7% Chrysotile
883,885, 887	9" Light Green VFT	Penthouse	Non-Friable	Good	5-7% Chrysotile
900,902, 904	9" Dark Green VFT	2nd floor Stairs (248)	Non-Friable	Good	4-5% Chrysotile
926	Yellow Carpet Glue	Rm. 224	Non-Friable	Good	6% Chrysotile
927	Black Mastic	Rm. 224 (below carpet)	Non-Friable	Good	6% Chrysotile
928	9" Dark Green VFT	Stairs near room 220	Non-Friable	Good	3% Chrysotile
929	Black Mastic	Stairs near room 220	Non-Friable	Good	2% Chrysotile
933	Black Mastic	Below carpet near room 221	Non-Friable	Good	4% Chrysotile
953	Black Mastic	Below 12” white VFT by room 168	Non-Friable	Good	4% Chrysotile
956,958, 960	12” Cream VFT (Specks)	Stairs (163)	Non-Friable	Good	2% Chrysotile
981,983	12” White VFT & Black Mastic	Room 142 (Electrical Area)	Non-Friable	Good	3-4% Chrysotile
1012-1018	9" Light Green VFT & Black Mastic	1st Floor	Non-Friable	Good	2-7% Chrysotile

3.4.3 Building 3 – Asbestos-Containing Materials Inventory Summary

Material	Category	Estimated Quantity
12'' Cream VFT (Speck)	Category I Non-Friable	500 SF
9" Dark Green VFT	Category I Non-Friable	425 SF
9" Light Green VFT	Category I Non-Friable	3,550 SF
Yellow Carpet Glue	Category I Non-Friable	4,000 SF
Black Mastic	Category I Non-Friable	10,000 SF

The quantities of asbestos-containing materials are estimates made at the time of sampling and should be used by the NMVAHCS for limited budgeting purposes only. These quantities are estimates only and should be verified by all parties, including any contractors bidding the

removal to determine exact square footage's and the accessibility of the specific materials. No mechanical as–build drawings were provided to formulate the estimate of TSI. The TSI quantities noted in the tables are total linear feet regardless of the outside diameter (OD) or systems to which it is supporting.

The specific locations of all TSI was not determined due to significant restrictions, which are as follows: (1) piping enclosed inside walls, (2) ceiling panel support/tie wires, (3) firewall extensions between floors throughout the plenums, and (4) the need to avoid creating/releasing dust inside the hospital.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	Not Quantified
Exterior Window Putty	Windows	Category II Non-Friable	Good	Not Quantified

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.5.2 Building 4 - Samples Reported as Asbestos-Containing

None of the samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory were reported to contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were

sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.6 Building 5

3.6.1 Building 5 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	Material Location	EPA Category	Condition	Quantity
Yellow Base Cove Adhesive	Offices	Category I Non-Friable	Good	100 SF
Vinyl Floor Tile (VFT) with Yellow & Black Mastic	Offices	Category I Non-Friable	Good	1,500 SF
2'x4' Ceiling Tile	Offices	Friable	Good	1,400 SF
Drywall/Joint Compound	Throughout	Category II Non-Friable	Good	2,600 SF
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	3,000 SF

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.6.2 Building 5 - Samples Reported as Asbestos-Containing

None of the samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory were reported to contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the

roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.7 Building 6

3.7.1 Building 6 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	Material Location	EPA Category	Condition	Quantity
Yellow Carpet Glue	Engineering-Throughout	Category I Non-Friable	Good	660 SF
2'x4' White Ceiling Tile	Engineering-Throughout	Friable	Good	700 SF
Cream Base Cove Adhesive	Engineering-Throughout	Category I Non-Friable	Good	75 SF
Drywall/Joint Compound	Engineering-Throughout	Category II Non-Friable	Good	4,000 SF
12" White VFT (Gray Streaks)	Carpenter Shop-Offices	Category I Non-Friable	Good	600 SF
Yellow Mastic	Carpenter Shop-Offices	Category I Non-Friable	Good	600 SF
Yellow Base Cove Adhesive	Carpenter Shop-Offices	Category I Non-Friable	Good	80 SF
Brown Base Cove Adhesive	Carpenter Shop-Break Room	Category I Non-Friable	Good	30 SF
Drywall/Joint Compound	Carpenter Shop-Offices	Category II Non-Friable	Good	1,350 SF
Plaster	Carpenter Shop-Restroom	Category II Non-Friable	Good	360 SF
Wall / Floor Coating	Water Softener Room	Category I Non-Friable	Good	1,300 SF
Black Wall Adhesive	Booster Pump Room	Category I Non-Friable	Good	600 SF
TSI	Water Softener Room	Friable	Damaged	20 LF
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	3,000 SF

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive

measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.7.1 Building 6 - Samples Reported as Asbestos-Containing

None of the samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory were reported to contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.8 Building 8

3.8.1 Building 8 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	Material Location	EPA Category	Condition	Quantity
2'x4' White Ceiling Tile	Office Area-Various Locations	Friable	Good	3,000 SF
2'x4' Cream Ceiling Tile	Office Area-Various Locations	Friable	Good	500 SF
12" White VFT (Speckled)	Cubical Area (some under Carpet)	Category I Non-Friable	Good	2,000 SF
Black Mastic	Cubical Area	Category I Non-Friable	Good	3,000 SF
Yellow Carpet Glue	Office Area-Various Locations	Category I Non-Friable	Good	1,000 SF
VFT	Office Area-Various Locations (below carpet)	Category I Non-Friable	Good	1,000 SF

(Continued-Building 8 Suspect Asbestos-Containing Materials)

Material Description	Material Location	EPA Category	Condition	Quantity
Cream Base Cove Adhesive	Various Locations	Category I Non-Friable	Good	275 SF
Drywall/Joint Compound	Throughout	Category II Non-Friable	Good	15,000 SF
Plaster	Various Locations	Category II Non-Friable	Good	1,000 SF
Interior Window Putty	Windows	Category II Non-Friable	Good	23 Windows
Cloth Wrap/TSI	Metal & Tool Shop	Friable	Good	250 LF
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	6,500 SF

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.8.1 Building 8 - Samples Reported as Asbestos-Containing

Sample No.	Material Description	Sample Location	Friability	Condition	% Asbestos
447,449, 463	Black Mastic below white 12” VFT and carpeted area	Cubicle	Non-Friable	Good	5-8% Chrysotile

3.8.2 Building 8 – Asbestos-Containing Materials Inventory Summary

Material	Category	Estimated Quantity
Black Mastic below white 12” VFT and carpeted areas	Category I Non-Friable	3,000 SF

The quantities of asbestos-containing materials are estimates made at the time of sampling and should be used by the NMVAHCS for limited budgeting purposes only. These quantities are estimates only and should be verified by all parties, including any contractors bidding the removal to determine exact square footage’s and the accessibility of the specific materials. No mechanical as–build drawings were provided to formulate the estimate of TSI. The TSI quantities noted in the tables are total linear feet regardless of the outside diameter (OD) or systems to which it is supporting.

The specific locations of all TSI was not determined due to significant restrictions, which are as follows: (1) piping enclosed inside walls, (2) ceiling panel support/tie wires, (3) firewall extensions between floors throughout the plenums, and (4) the need to avoid creating/releasing dust inside the hospital.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.9 Building 9

3.9.1 Building 9 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	Material Location	EPA Category	Condition	Quantity
12” Gray VFT	Various Locations	Category I Non-Friable	Good	1,900 SF
Black Mastic	Various Locations (Below VFT)	Category I Non-Friable	Good	1,900 SF
Interior Window Putty	Windows	Category II Non-Friable	Good	24 Windows
Cream Base Cove Adhesive	Various Locations	Category I Non-Friable	Good	300 SF
Tan Adhesive	Throughout Area (below rubber flooring)	Category I Non-Friable	Good	14,000 SF
Yellow Carpet Glue	Various Locations	Category I Non-Friable	Good	200 SF
Drywall/Joint Compound	Various Locations	Category II Non-Friable	Good	6,000 SF
2’x4’ White Ceiling Tile	Various Locations	Friable	Good	700 SF
2’x2’ White Ceiling Tile	Various Locations	Friable	Good	500 SF
White HVAC Cloth	Throughout	Category I Non-Friable	Good	Not Quantified
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	16,000 SF

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection

3.9.2 Building 9 - Samples Reported as Asbestos-Containing

None of the samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory were reported to contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.10 Building 10

3.10.1 Building 10 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building. At the direction of NMVAHCS personnel, Altec Testing & Engineering, Inc. did not perform an inspection of the North section of the 1st floor or any of the 2nd floor.

Material Description	Material Location	EPA Category	Condition	Quantity
12” White VFT	Entrance Room 18	Category I Non-Friable	Good	250 SF
Yellow Adhesive	Entrance Room 18 (Below VFT)	Category I Non-Friable	Good	300 SF
Brown Base Cove Adhesive	Entrance Room 18	Category I Non-Friable	Good	15 SF
Cloth Wrap/TSI	Above Hallway Ceiling, Various Rooms & Crawl Space & Mechanical Rm.	Friable	Some Damage	Not Quantified

(Continued-Building 10 Suspect Asbestos-Containing Materials)

Material Description	Material Location	EPA Category	Condition	Quantity
Black HVAC Tar	Above Hallway Ceiling	Category I Non-Friable	Good	Not Quantified
2'x4' White Ceiling Tile	Hallway	Friable	Good	950 SF
12" Light Green (Streaked) VFT	Various Rooms	Category I Non-Friable	Good	700 SF
Black Mastic (Below VFT)	Various Rooms	Category I Non-Friable	Good	700 SF
12" Cream (Speckled) VFT	Various Rooms	Category I Non-Friable	Good	150 SF
Black/Yellow Mastic (Below VFT)	Various Rooms	Category I Non-Friable	Good	150 SF
Blue Floor Coating	Various Rooms	Category I Non-Friable	Good	1,500 SF
Brown Base Cove Adhesive	Various Rooms	Category I Non-Friable	Good	900 SF
Gray HVAC Expansion Tape	Various Rooms	Category II Non-Friable	Good	200 SF
Plaster	Hard Ceilings	Category II Non-Friable	Good	6,000 SF
Laboratory Counter Tops	Various Rooms	Category II Non-Friable	Good	Not Quantified Not Sampled
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	Not Quantified
Exterior Window Putty	Windows	Category II Non-Friable	Good	Not Quantified

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.10.2 Building 10 - Samples Reported as Asbestos-Containing

Sample No.	Material Description	Sample Location	Friability	Condition	% Asbestos
216-221	12" VFT Lite Green (Streak)	Various Rooms	Non-Friable	Good	3-7% Chrysotile

(Continued-Building 10 Asbestos-Containing Materials)

Sample No.	Material Description	Sample Location	Friability	Condition	% Asbestos
223, 225, 227	Yellow/Black Mastic below 12" Cream VFT	Various Rooms	Non-Friable	Good	2-4% Chrysotile

3.10.3 Building 10 - Asbestos-Containing Materials Inventory Summary

Material	Category	Estimated Quantity
12" VFT Lite Green (Streak)	Category I Non-Friable	700 SF
Yellow/Black Mastic below 12" Cream VFT	Category I Non-Friable	150 SF

The quantities of asbestos-containing materials are estimates made at the time of sampling and should be used by the NMVAHCS for limited budgeting purposes only. These quantities are estimates only and should be verified by all parties, including any contractors bidding the removal to determine exact square footage's and the accessibility of the specific materials. No mechanical as–build drawings were provided to formulate the estimate of TSI. The TSI quantities noted in the tables are total linear feet regardless of the outside diameter (OD) or systems to which it is supporting.

The specific locations of all TSI was not determined due to significant restrictions, which are as follows: (1) piping enclosed inside walls, (2) ceiling panel support/tie wires, (3) firewall extensions between floors throughout the plenums, and (4) the need to avoid creating/releasing dust inside the hospital.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.11 Building 11

3.11.1 Building 11 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	**Material Location**	**EPA Category**	**Condition**	**Quantity**
Plaster	2nd Floor – Throughout	Category II Non-Friable	Good	15,000 SF
2'x4' White Ceiling Tile	2nd Floor – Various Locations	Friable	Good	1,000 SF
TSI 6" Elbow	2nd Floor – Hallway Above Ceiling Tile	Friable	Good	Not Quantified
9" Dark Green VFT	2nd Floor – Various Locations	Category I Non-Friable	Good	1,600 SF
Black Mastic	2nd Floor – Various Locations (Below VFT)	Category I Non-Friable	Good	1,600 SF
9" Light Green VFT	2nd Floor – Various Locations	Category I Non-Friable	Good	1,800 SF
12" White VFT (Light Green Speckles)	2nd Floor – Various Locations	Category I Non-Friable	Good	350 SF
Yellow/Black Mastic	2nd Floor – Various Locations (Below VFT)	Category I Non-Friable	Good	600 SF
12" Tan VFT (Speckles)	2nd Floor – Various Locations	Category I Non-Friable	Good	135 SF
12" White VFT (Gray Speckles)	2nd Floor – Various Locations	Category I Non-Friable	Good	300 SF
2'x4' White Ceiling Tile	2nd Floor – Various Locations	Friable	Good	600 SF
12" Pink VFT (Speckles)	2nd Floor – Various Locations	Category I Non-Friable	Good	250 SF
Yellow Mastic	2nd Floor – Various Locations (Below VFT)	Category I Non-Friable	Good	250 SF
Drywall/Joint Compound	2nd Floor – Various Locations	Category II Non-Friable	Good	500 SF
Cream Base Cove Adhesive	2nd Floor – Various Locations	Category I Non-Friable	Good	25 SF
Drywall/Joint Compound	1st Floor – Various Locations	Category II Non-Friable	Good	500 SF
Cream Base Cove Adhesive	1st Floor – Various Locations	Category I Non-Friable	Good	25 SF
12" Pink VFT (Speckles)	1st Floor – Various Locations	Category I Non-Friable	Good	150 SF

(Continued-Building 11 Suspect Asbestos-Containing Materials)

Material Description	**Material Location**	**EPA Category**	**Condition**	**Quantity**
Yellow/Black Mastic	1st Floor – Various Locations	Category I Non-Friable	Good	150 SF
Yellow Carpet Glue	1st Floor – Various Locations	Category I Non-Friable	Good	7,500 SF
VFT (below carpet)	1st Floor – Various Locations	Category I Non-Friable	Good	7,500 SF
Yellow/Black Mastic	1st Floor – Various Locations	Category I Non-Friable	Good	7,500 SF
12" Light Pink VFT (Speckles)	1st Floor – Various Locations	Category I Non-Friable	Good	1,500 SF
Yellow/Black Mastic	1st Floor – Various Locations	Category I Non-Friable	Good	1,500 SF
Plaster	1st Floor – Throughout	Category II Non-Friable	Good	22,000 SF
2'x4' White Ceiling Tile	1st Floor – Various Locations	Friable	Good	7,500 SF
Cloth Wrap/TSI	1st Floor – janitors Closet	Friable	Good	800 LF
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	Not Quantified
Exterior Window Putty	Windows	Category II Non-Friable	Good	Not Quantified
12" White VFT (Black Streak)	Basement – Room 3A	Category I Non-Friable	Good	800 SF
Yellow Mastic	Basement – Room 3A	Category I Non-Friable	Good	800 SF
Cloth Wrap/TSI	Basement – Various Locations	Friable	Good	35 Elbows
Plaster	Basement – Various Locations	Category II Non-Friable	Good	10,000 SF
Cloth @ HVAC Duct	Basement – Mechanical Room 201B	Friable	Good	400 SF
Cloth @ 2" Pipe	Basement – Mechanical Room 201B	Friable	Good	30 LF

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and

pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.11.2 Building 11 - Samples Reported as Asbestos-Containing

Sample No.	Material Description	Sample Location	Friability	Condition	% Asbestos
786	6" TSI Elbow	Above ceiling tile room 205	Friable	Good	2% Chrysotile
787,789, 791	9" Dark Green VFT	Throughout 2nd Floor	Non-Friable	Good	3-5% Chrysotile
793,795, 797	9" light Green VFT	Throughout 2nd Floor	Non-Friable	Good	4-5% Chrysotile
839	Black Mastic Below 12" Light Pink VFT	1st Floor	Non-Friable	Good	3% Chrysotile
862,863, 869,870	Cloth Jacket & TSI Elbows	Throughout Basement	Friable	Good	2-7% Chrysotile

3.11.3 Building 11 – Asbestos-Containing Materials Inventory Summary

Material	Category	Estimated Quantity
6" TSI Elbow	Friable	1 Elbow
9" Dark Green VFT	Category I Non Friable	1,600 SF
9" light Green VFT	Category I Non Friable	1,600 SF
Black Mastic Below 12" Light Pink VFT	Category I Non Friable	1,600 SF
Cloth Jacket & TSI Elbows	Friable	35 Elbows

The quantities of asbestos-containing materials are estimates made at the time of sampling and should be used by the NMVAHCS for limited budgeting purposes only. These quantities are estimates only and should be verified by all parties, including any contractors bidding the removal to determine exact square footage's and the accessibility of the specific materials. No mechanical as–build drawings were provided to formulate the estimate of TSI. The TSI quantities noted in the tables are total linear feet regardless of the outside diameter (OD) or systems to which it is supporting.

The specific locations of all TSI was not determined due to significant restrictions, which are as follows: (1) piping enclosed inside walls, (2) ceiling panel support/tie wires, (3) firewall extensions between floors throughout the plenums, and (4) the need to avoid creating/releasing dust inside the hospital.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the

roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.12 Building 12

3.12.1 Building 12 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	Material Location	EPA Category	Condition	Quantity
Yellow Carpet Glue	1st Floor – Copy Room Secretaries Office	Category I Non-Friable	Good	450 SF
Gray VFT	1st Floor – Copy Room	Category I Non-Friable	Good	105 SF
Black/Yellow Mastic	1st Floor – Copy Room	Category I Non-Friable	Good	105 SF
2'x4' White Ceiling Tile	1st Floor – Various Locations	Friable	Good	105 SF
Plaster	Throughout	Category II Non-Friable	Good	8,000 SF
Cream Base Cove Adhesive	1st Floor – Copy Room	Category I Non-Friable	Good	15 SF
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	8,000 SF
Exterior Window Putty	Windows	Category II Non-Friable	Good	15 Windows
Cloth Wrap & TSI	Basement	Friable	Good	150 LF
12" White VFT (Streak)	Stairwell Landing	Category I Non-Friable	Good	20 SF
Yellow / Black Mastic	Stairwell Landing	Category I Non-Friable	Good	20 SF

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.12.2 Building 12 - Samples Reported as Asbestos-Containing

None of the samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory were reported to contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.13 Building 13

3.13.1 Building 13 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	Material Location	EPA Category	Condition	Quantity
Yellow / Brown Carpet Glue	1st Floor – Throughout	Category I Non-Friable	Good	2,200 SF
2'x4' White Ceiling Tile	1st Floor – Throughout	Friable	Good	2,200 SF
Plaster	Throughout	Category II Non-Friable	Good	8,000 SF
Drywall/Joint Compound	1st Floor – Throughout	Category II Non-Friable	Good	700 SF
Yellow Base Cove Adhesive	1st Floor – Throughout	Category II Non-Friable	Good	300 SF
12" Cream VFT (Streak)	Kitchen	Category I Non-Friable	Good	150 SF
Yellow Adhesive	Kitchen	Category I Non-Friable	Good	150 SF
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	8,000 SF
Exterior Window Putty	Windows	Category II Non-Friable	Good	22 Windows
Cloth Wrap & TSI	Basement	Friable	Good	150 LF

Cement Sink	Basement	Category II Non-Friable	Good	40 LF

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.13.2 Building 13 - Samples Reported as Asbestos-Containing

None of the samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory were reported to contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.14 Building 14

3.14.1 Building 14 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	Material Location	EPA Category	Condition	Quantity
Yellow / Black Carpet Glue	1st Floor – Throughout	Category I Non-Friable	Good	2,200 SF
Cream Vapor Barrier	1st Floor – Throughout (Below Carpet)	Category II Non-Friable	Good	2,200 SF
Black Adhesive	1st Floor – Throughout (Below Carpet)	Category II Non-Friable	Good	2,200 SF
Cloth material	1st Floor – Throughout (Below Carpet)	Category II Non-Friable	Good	2,200 SF
Plaster	Throughout	Category II Non-Friable	Good	8,000 SF
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	6,000 SF

(Continued-Building 14 Suspect Asbestos-Containing Materials)

Material Description	Material Location	EPA Category	Condition	Quantity
Exterior Window Putty	Windows	Category II Non-Friable	Good	20 Windows
Cloth Wrap & TSI	Basement	Friable	Good	150 LF

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.14.2 Building 14 - Samples Reported as Asbestos-Containing

None of the samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory were reported to contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.15 Building 15

3.15.1 Building 15 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	Material Location	EPA Category	Condition	Quantity
12” Green VFT (Streak)	Therapy Room	Category I Non-Friable	Damaged	1,800 SF
Black Mastic	Therapy Room	Category I	Damaged	2,500 SF

		Non-Friable		

(Continued-Building 15 Suspect Asbestos-Containing Materials)

Material Description	**Material Location**	**EPA Category**	**Condition**	**Quantity**
12" Pink VFT (Streak)	Therapy Room	Category I Non-Friable	Damaged	40 SF
TSI Elbows& Cloth Wrap/TSI	Therapy Room, Basement Former Restroom & Crawl Space	Friable	Good	12 Elbows 500 LF
Yellow/Brown Base Cove Adhesive	Therapy Room	Category I Non-Friable	Damaged	70 SF
12" White VFT (Streak)	Therapy Room	Category I Non-Friable	Damaged	650 SF
Yellow Adhesive	Therapy Room	Category I Non-Friable	Damaged	650 SF
Drywall/Joint Compound	Therapy Room	Category II Non-Friable	Damaged	400 SF
2'x4' White Ceiling Tile	1st Floor – Throughout	Friable	Damaged	2,500 SF
Yellow Carpet Glue	1st Floor – Throughout	Category I Non-Friable	Damaged	2,500 SF
Floor Float Material	1st Floor – Throughout	Category II Non-Friable	Damaged	2,500 SF
Black Mastic	1st Floor – Throughout	Category I Non-Friable	Damaged	2,500 SF
Wall Texture	1st Floor – Throughout	Category II Non-Friable	Damaged	12,000 SF
Drywall/Joint Compound	1st Floor – Throughout	Category II Non-Friable	Damaged	12,000 SF
Plaster	1st Floor – Throughout	Category II Non-Friable	Damaged	5,500 SF
Yellow Base Cove Adhesive	1st Floor – Throughout	Category I Non-Friable	Damaged	70 SF
12" White VFT (Speckled)	1st Floor – Restroom	Category I Non-Friable	Damaged	50 SF
Yellow Mastic	1st Floor – Restroom	Category I Non-Friable	Damaged	50 SF
Gray Exterior Stucco (Old)	Exterior Walls	Category II Non-Friable	Good	6,000 SF
Gray Exterior Stucco (New)	Exterior Walls-Warehouse	Category II Non-Friable	Good	12,000 SF
Exterior Window Putty	Windows	Category II Non-Friable	Good	15 Windows

At the time of Inspection this building was undergoing major renovation. Many of the materials identified may be removed as part of the planned renovation. This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas, hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

No access was provided to the back warehouse area with alarmed doors at the time of inspection.

3.15.2 Building 15 - Samples Reported as Asbestos-Containing

Sample No.	Material Description	Sample Location	Friability	Condition	% Asbestos
362,364, 366,368, 370,372, 381,385, 389	Black mastic below green VFT & pink VFT	Back Warehouse	Non-Friable	Good	2-5% Chrysotile
428,432, 436	VFT below white 12" non asbestos VFT	Restroom near stairs	Non-Friable	Good	3% Chrysotile

3.15.3 Building 15 - Asbestos-Containing Materials Inventory Summary

Material	Category	Estimated Quantity
Black mastic below green VFT & pink VFT	Category I Non-Friable	2,500 SF
VFT below white 12" non asbestos VFT	Category I Non-Friable	50 SF

The quantities of asbestos-containing materials are estimates made at the time of sampling and should be used by the NMVAHCS for limited budgeting purposes only. These quantities are estimates only and should be verified by all parties, including any contractors bidding the removal to determine exact square footage's and the accessibility of the specific materials. No mechanical as–build drawings were provided to formulate the estimate of TSI. The TSI quantities noted in the tables are total linear feet regardless of the outside diameter (OD) or systems to which it is supporting.

The specific locations of all TSI was not determined due to significant restrictions, which are as follows: (1) piping enclosed inside walls, (2) ceiling panel support/tie wires, (3) firewall extensions between floors throughout the plenums, and (4) the need to avoid creating/releasing dust inside the hospital.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.16 Building 18

3.16.1 Building 18 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	Material Location	EPA Category	Condition	Quantity
Gold VFC	Kitchen	Category II Non-Friable	Good	200 SF
Float Material	Kitchen	Category II Non-Friable	Good	200 SF
Black Mastic	Kitchen	Category I Non-Friable	Good	200 SF
Plaster	Throughout	Category II Non-Friable	Damaged	15,000 SF
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	12,000 SF
Exterior Window Putty	Windows	Category II Non-Friable	Good	15 Windows
Cloth Wrap/TSI	Basement-Crawl Space	Friable	Good	150 LF
Cement Sink	Basement	Category II Non-Friable	Good	40 SF

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.16.2 Building 18 - Samples Reported as Asbestos-Containing

Sample No.	Material Description	Sample Location	Friability	Condition	% Asbestos

335, 338, 341	Gold VFC	Kitchen	Non-Friable	Good	20% Chrysotile

(Continued-Building 18 Asbestos-Containing Materials)

Sample No.	Material Description	Sample Location	Friability	Condition	% Asbestos
336, 339, 342	Float Material	Kitchen	Non-Friable	Good	3% Chrysotile
337, 340, 343	Black Mastic	Kitchen	Non-Friable	Good	4-5% Chrysotile

3.16.3 Building 18 – Asbestos-Containing Materials Inventory Summary

Material	Category	Estimated Quantity
Gold VFC	Category II Non Friable	200 SF
Float Material	Category I Non Friable	200 SF
Black Mastic	Category I Non Friable	200 SF

The quantities of asbestos-containing materials are estimates made at the time of sampling and should be used by the NMVAHCS for limited budgeting purposes only. These quantities are estimates only and should be verified by all parties, including any contractors bidding the removal to determine exact square footage's and the accessibility of the specific materials. No mechanical as–build drawings were provided to formulate the estimate of TSI. The TSI quantities noted in the tables are total linear feet regardless of the outside diameter (OD) or systems to which it is supporting.

The specific locations of all TSI was not determined due to significant restrictions, which are as follows: (1) piping enclosed inside walls, (2) ceiling panel support/tie wires, (3) firewall extensions between floors throughout the plenums, and (4) the need to avoid creating/releasing dust inside the hospital.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.17 Building 32

3.17.1 Building 32 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	Material Location	EPA Category	Condition	Quantity
12" White VFT (Streak)	Open Area	Category I Non-Friable	Good	240 SF
Yellow / Black Mastic	Open Area	Category I Non-Friable	Good	240 SF
Plaster	Throughout	Category II Non-Friable	Good	18,000 SF
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	600 SF
Exterior Window Putty	Windows	Category II Non-Friable	Good	8 Windows

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.17.2 Building 32 - Samples Reported as Asbestos-Containing

None of the samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory were reported to contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.18 Building 33

3.18.1 Building 33 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	Material Location	EPA Category	Condition	Quantity
12" White VFT (Gray Streaks)	Throughout	Category I Non-Friable	Good	1,000 SF
Yellow Adhesive	Throughout	Category I Non-Friable	Good	1,000 SF
Drywall/Joint Compound	Office / Restroom	Category II Non-Friable	Good	1,100 SF
Wall Coating	Interior Perimeter Wall	Category II Non-Friable	Good	2,100 SF
Yellow Base Cove Adhesive	Office / Restroom	Category I Non-Friable	Good	80 SF
2'x4' White Ceiling Tile	Office / Restroom	Friable	Good	160 SF
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	2,000 SF
Exterior Window Putty	Windows	Category II Non-Friable	Good	8 Windows

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.18.2 Building 33 - Samples Reported as Asbestos-Containing

None of the samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory were reported to contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.19 Building 39

3.19.1 Building 39 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	Material Location	EPA Category	Condition	Quantity
2'x4' White Ceiling Tile	Office / Restroom	Friable	Good	1,200 SF
HVAC Joint Seal	Ceiling Plenum	Category I Non-Friable	Good	Not Quantified
1'x1' Ceiling Tile	Lobby /Entrances	Friable	Good	1,000 SF
Drywall/Joint Compound	Throughout	Category II Non-Friable	Good	25,000 SF
Cream Base Cove Adhesive	Various Locations	Category I Non-Friable	Good	90 SF
12" mauve VFT	Hallways & Projection Room	Category I Non-Friable	Good	1,500 SF
12" Peach VFT	Hallways & Projection Room	Category I Non-Friable	Good	400 SF
12" Gray VFT	Copy Room	Category I Non-Friable	Good	90 SF
Yellow VFT Adhesive	Throughout	Category I Non-Friable	Good	1,990 SF
Yellow Carpet Adhesive	Various Locations	Category I Non-Friable	Good	2,500 SF
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	10,000 SF

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.19.2 Building 39 - Samples Reported as Asbestos-Containing

Sample No.	Material Description	Sample Location	Friability	Condition	% Asbestos

1232-34	HVAC Joint Seal	Ceiling Plenum	Non-Friable	Good	20% Chrysotile

(Continued-Building 39 Asbestos-Containing Materials)

Sample No.	Material Description	Sample Location	Friability	Condition	% Asbestos
1249, 1251, 1253	12" Gray VFT	Room 120	Non-Friable	Good	4% Chrysotile
1257	Yellow Carpet Adhesive	Throughout	Non-Friable	Good	5% Chrysotile

3.19.3 Building 39 – Asbestos-Containing Materials Inventory Summary

Material	Category	Estimated Quantity
HVAC Joint Seal	Category I Non Friable	1,000 SF
12" Gray VFT	Category I Non Friable	90 SF
Yellow Carpet Adhesive	Category I Non Friable	2,500 SF

The quantities of asbestos-containing materials are estimates made at the time of sampling and should be used by the NMVAHCS for limited budgeting purposes only. These quantities are estimates only and should be verified by all parties, including any contractors bidding the removal to determine exact square footage's and the accessibility of the specific materials. No mechanical as–build drawings were provided to formulate the estimate of TSI. The TSI quantities noted in the tables are total linear feet regardless of the outside diameter (OD) or systems to which it is supporting.

The specific locations of all TSI was not determined due to significant restrictions, which are as follows: (1) piping enclosed inside walls, (2) ceiling panel support/tie wires, (3) firewall extensions between floors throughout the plenums, and (4) the need to avoid creating/releasing dust inside the hospital.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.20 Building 57

3.20.1 Building 57 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	Material Location	EPA Category	Condition	Quantity
2'x4' White Ceiling Tile	1st Floor - Throughout	Friable	Good	400 SF
Yellow Base Cove Adhesive	1st Floor - Throughout	Category I Non-Friable	Good	50 SF
Yellow Carpet Glue	1st Floor - Throughout	Category I Non-Friable	Good	400 SF
Drywall/Joint Compound	Throughout	Category II Non-Friable	Good	1,400 SF
Plaster	1st Floor @ Column	Category II Non-Friable	Good	50 SF
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	3,000 SF
TSI	2nd Floor Storage Room	Friable	Good	6 Elbows
Yellow Carpet Glue	2nd Floor Storage Room	Category I Non-Friable	Good	160 SF

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.20.2 Building 57 - Samples Reported as Asbestos-Containing

Sample No.	Material Description	Sample Location	Friability	Condition	% Asbestos
110, 111	Yellow/Black Carpet Glue	1st Floor	Non-Friable	Good	3-6 % Crysotile
118	TSI	Storage Room	Friable	Good	11 % Crysotile

3.20.3 Building 57 – Asbestos-Containing Materials Inventory Summary

Material	Category	Estimated Quantity
Yellow/Black Carpet Glue	Category I Non-Friable	400 SF
TSI	Friable	6 Elbows

The quantities of asbestos-containing materials are estimates made at the time of sampling and should be used by the NMVAHCS for limited budgeting purposes only. These quantities are estimates only and should be verified by all parties, including any contractors bidding the removal to determine exact square footage's and the accessibility of the specific materials. No

mechanical as–build drawings were provided to formulate the estimate of TSI. The TSI quantities noted in the tables are total linear feet regardless of the outside diameter (OD) or systems to which it is supporting.

The specific locations of all TSI was not determined due to significant restrictions, which are as follows: (1) piping enclosed inside walls, (2) ceiling panel support/tie wires, (3) firewall extensions between floors throughout the plenums, and (4) the need to avoid creating/releasing dust inside the hospital.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.21 Building 58

3.21.1 Building 58 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	Material Location	EPA Category	Condition	Quantity
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	800 SF

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.21.2 Building 58 - Samples Reported as Asbestos-Containing

None of the samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory were reported to contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.22 Building 60

3.22.1 Building 60 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	Material Location	EPA Category	Condition	Quantity
Plaster	Interior Walls	Category II Non-Friable	Good	250 SF
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	1,500 SF

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.22.2 Building 60 - Samples Reported as Asbestos-Containing

None of the samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory were reported to contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes.

All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.23 Building 61

3.23.1 Building 61 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	Material Location	EPA Category	Condition	Quantity
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	1,500 SF

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.23.2 Building 61 - Samples Reported as Asbestos-Containing

None of the samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory were reported to contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.24 Building 62

3.24.1 Building 62 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	**Material Location**	**EPA Category**	**Condition**	**Quantity**
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	1,500 SF

(Continued-Building 32 Suspect Asbestos-Containing Materials)

Material Description	Material Location	EPA Category	Condition	Quantity
Exterior Window Putty	Windows	Category II Non-Friable	Damaged	6 Windows

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.245.2 Building 62 - Samples Reported as Asbestos-Containing

None of the samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory were reported to contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.25 Building 63

3.25.1 Building 63 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	Material Location	EPA Category	Condition	Quantity
Black Adhesive	Ceiling & Walls	Category I Non-Friable	Good	650 SF
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	1,500 SF
Exterior Window Putty	Windows	Category II Non-Friable	Damaged	6 Windows

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.25.2 Building 63 - Samples Reported as Asbestos-Containing

Sample No.	Material Description	Sample Location	Friability	Condition	% Asbestos
79-81	Black Adhesive	Ceiling / Walls	Non-Friable	Good	8% Chrysotile

3.25.3 Building 63 – Asbestos-Containing Materials Inventory Summary

Material	Category	Estimated Quantity
Black Adhesive	Category I Non-Friable	650 SF

The quantities of asbestos-containing materials are estimates made at the time of sampling and should be used by the NMVAHCS for limited budgeting purposes only. These quantities are estimates only and should be verified by all parties, including any contractors bidding the removal to determine exact square footage's and the accessibility of the specific materials. No mechanical as–build drawings were provided to formulate the estimate of TSI. The TSI quantities noted in the tables are total linear feet regardless of the outside diameter (OD) or systems to which it is supporting.

The specific locations of all TSI was not determined due to significant restrictions, which are as follows: (1) piping enclosed inside walls, (2) ceiling panel support/tie wires, (3) firewall extensions between floors throughout the plenums, and (4) the need to avoid creating/releasing dust inside the hospital.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.26 Building 65

3.26.1 Building 65 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	Material Location	EPA Category	Condition	Quantity
Drywall/Joint Compound	Interior Perimeter Wall	Category II Non-Friable	Good	600 SF
Gasket	Pipe	Category II Non-Friable	Good	Not Quantified
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	2,000 SF

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.26.2 Building 65 - Samples Reported as Asbestos-Containing

None of the samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory were reported to contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.27 Building T35

3.27.1 Building T35 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	Material Location	EPA Category	Condition	Quantity
2'x4' White Ceiling Tile	Restroom	Friable	Good	30 SF
Yellow Base Cove Adhesive	Restroom	Category I Non-Friable	Good	10 SF
Wall Texture	Restroom	Category II Non-Friable	Good	430 SF
Joint Compound	Restroom	Category II Non-Friable	Good	200 SF
Drywall/Joint Compound	Throughout	Category II Non-Friable	Good	430 SF
Plaster	Ceiling Rafters	Category II Non-Friable	Good	60 SF
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	600 SF
Exterior Window Putty	Exterior Windows	Category II Non-Friable	Damaged	Not Quantified

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.27.2 Building T35 - Samples Reported as Asbestos-Containing

None of the samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory were reported to contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.28 Building T35A

3.28.1 Building T35A - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	Material Location	EPA Category	Condition	Quantity
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	600 SF
Exterior Window Putty	Exterior Windows	Category II Non-Friable	Damaged	16 Windows

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.28.2 Building T35A - Samples Reported as Asbestos-Containing

None of the samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory were reported to contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.29 Building T38A

3.29.1 Building T38A - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	Material Location	EPA Category	Condition	Quantity
Drywall/Joint Compound	Office / Restroom	Category II Non-Friable	Good	1,100 SF
Wall Texture	Restroom	Category II Non-Friable	Good	400 SF
12" White VFT (Speckled)	Office	Category I Non-Friable	Good	100 SF
Clear Adhesive	Office	Category I Non-Friable	Good	100 SF
Yellow Base Cove Adhesive	Office	Category I Non-Friable	Good	25 SF
White Sink Coating	Wash Area	Category I Non-Friable	Good	5 SF
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	800 SF

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.29.2 Building T38A - Samples Reported as Asbestos-Containing

None of the samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory were reported to contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.30 Building T38B

3.30.1 Building T38B - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	Material Location	EPA Category	Condition	Quantity
Joint Compound	Throughout Wallboard Connections	Category II Non-Friable	Good	800 SF
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	800 SF

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.30.2 Building T38B - Samples Reported as Asbestos-Containing

Sample No.	Material Description	Sample Location	Friability	Condition	% Asbestos
195	Joint Compound	Metal Joints	Non-Friable	Good	3% Chrysotile

3.30.3 Building T38B – Asbestos-Containing Materials Inventory Summary

Material	Category	Estimated Quantity
Joint Compound	Category II Non-Friable	800 SF

The quantities of asbestos-containing materials are estimates made at the time of sampling and should be used by the NMVAHCS for limited budgeting purposes only. These quantities are estimates only and should be verified by all parties, including any contractors bidding the removal to determine exact square footage's and the accessibility of the specific materials. No mechanical as–build drawings were provided to formulate the estimate of TSI. The TSI quantities noted in the tables are total linear feet regardless of the outside diameter (OD) or systems to which it is supporting.

The specific locations of all TSI was not determined due to significant restrictions, which are as follows: (1) piping enclosed inside walls, (2) ceiling panel support/tie wires, (3) firewall extensions between floors throughout the plenums, and (4) the need to avoid creating/releasing dust inside the hospital.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.31 Building T46

3.31.1 Building T46 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	Material Location	EPA Category	Condition	Quantity
Drywall/ Joint Compound	Throughout	Category II Non-Friable	Good	4,800 SF
Gray Exterior Stucco	Exterior Walls	Category II Non-Friable	Good	2,500 SF
Exterior Window Putty	Exterior Windows	Category II Non-Friable	Good	16 Windows

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.31.2 Building T46 - Samples Reported as Asbestos-Containing

None of the samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory were reported to contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect materials located on the roofs must be assumed to be asbestos containing until such time they have been tested and shown otherwise.

3.32 Building T59

3.32.1 Building T59 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	Material Location	EPA Category	Condition	Quantity
2'x4' White Ceiling Tile	Throughout	Friable	Good	1,800 SF
White Ceiling Tile	Throughout	Friable	Good	1,800 SF
Drywall/ Joint Compound	Throughout	Category II Non-Friable	Good	5,000 SF
Yellow Carpet Glue	Throughout	Category I Non-Friable	Good	1,800 SF
12" Blue VFT	Women's Restroom	Category I Non-Friable	Good	80 SF
Yellow Adhesive	Women's Restroom (Below VFT)	Category I Non-Friable	Good	80 SF
Yellow Base Cove Adhesive	Throughout	Category I Non-Friable	Good	150 SF
12" Light Blue VFT	Men's Restroom	Category I Non-Friable	Good	50 SF
Clear Adhesive	Men's Restroom (Below VFT)	Category I Non-Friable	Good	50 SF
Wall Texture	Cubicle Area	Category II Non-Friable	Good	2,500 SF

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.32.2 Building T59 - Samples Reported as Asbestos-Containing

None of the samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory were reported to contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to suspect asbestos-containing roofing materials there may be other suspect ACMs located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect ACMs located on the roofs must be assumed to be asbestos containing until they have been tested and laboratory results prove otherwise.

3.33 Building T61

3.33.1 Building T61 - Suspect Asbestos-Containing Materials

The following table lists the suspect asbestos containing materials identified within the building.

Material Description	Material Location	EPA Category	Condition	Quantity
Yellow Carpet Glue	Throughout	Category I Non-Friable	Good	2,000 SF
Yellow/Cream Base Cove Adhesive	Throughout	Category I Non-Friable	Good	200 SF
2'x4' White Ceiling Tile	Throughout	Friable	Good	2,500 SF
White Ceiling Tile	Throughout	Friable	Good	2,500 SF
Drywall/ Joint Compound	Throughout	Category II Non-Friable	Good	6,000 SF
12" White VFT	Restrooms	Category I Non-Friable	Good	110 SF
Clear Adhesive	Restrooms (Below VFT)	Category I Non-Friable	Good	110 SF
White/Gray Caulking	Women's Restroom Along Wall	Category I Non-Friable	Good	Not Quantified

This inspection was conducted as a comprehensive survey but due to the inaccessibility of some areas hidden materials may exist that would only be accessible through destructive

measures. Such materials would include but are not limited to TSI on pipes in wall cavities, materials above hard lid ceilings, below carpeting, laminate flooring or flooring overlays, and pipe gaskets. None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection.

3.33.2 Building T61 - Samples Reported as Asbestos-Containing

None of the samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory were reported to contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

None of the roofs were accessed or inspected during this survey as directed by NMVAHCS personnel at the time of the inspection. Therefore none of the roofing materials were sampled. In addition to suspect asbestos-containing roofing materials there may be other suspect ACMs located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect ACMs located on the roofs must be assumed to be asbestos containing until they have been tested and laboratory results prove otherwise.

4.0 SUSPECT ACMS – NOT SAMPLED

4.1 Underground Cement (Transite) Utilities Pipe

Although excavation and/or review of as-built underground utility drawings were not part of this investigation, it should be assumed that Transite utility pipes may exist underground. Water delivery and electrical systems often used Transite pipe – an asbestos containing cement material – and should be assumed to be present below surface throughout the site. An investigation should be performed prior to any planned excavating, grading, or digging.

4.2 Roofing Materials

None of the roofs were accessed or inspected during this survey. Therefore none of the roofing materials were sampled. In addition to suspect asbestos-containing roofing materials there may be other suspect ACMs located on the roof such as but not limited to HVAC duct seam, patching & penetration tar and TSI on pipes. All suspect ACMs located on the roofs must be assumed to be asbestos containing until they have been tested and laboratory results prove otherwise.

4.3 Laboratory Counter Tops

Several buildings at this facility have laboratory counter tops that are suspect asbestos-containing materials. Sampling these materials is very destructive and would ruin a portion of the counter top. Destructive testing was not a part of the scope of work for this sampling project. These materials must be assumed to be asbestos-containing until they have been tested and laboratory results prove otherwise.

4.4 Mirror Mastic/Adhesives

Several buildings at this facility have wall mounted mirrors that are applied with adhesive. The adhesive is a suspect asbestos-containing material. Sampling these materials is very destructive and would result in broken mirrors. Destructive testing was not a part of the scope of work for this sampling project. These materials must be assumed to be asbestos-containing until they have been tested and laboratory results prove otherwise.

5.0 GENERAL INFORMATION

5.1 Asbestos Definition

Asbestos is a term used to describe six different naturally occurring mineral fibers found in certain rock formations. Asbestos fibers can be found in relatively low levels nearly everywhere in the environment. Prior to 1980, asbestos mineral fibers were used extensively as matrix components during the manufacturing of building materials and products. Asbestos became a popular building material component due to the strength of the fibers, their resistance to heat and corrosion and their tremendous insulation and acoustic properties. Due to the fibers small size and weight, once airborne (during demolition or after damage), they can remain suspended for many hours. Airborne releases pose a potential exposure condition because the inhalation of airborne asbestos fibers can cause serious health problems. The Environmental Protection Agency (EPA) and the Occupational Health and Safety Administration (OSHA) have enacted several laws to protect the public and private sector from excessive exposure to airborne asbestos fibers. An asbestos survey is the first step in the complicated process of identifying asbestos-containing materials in a building and monitoring the condition, removal and disposal.

5.2 Regulatory Overview

In 1986, Congress enacted the Asbestos Hazard Emergency Response Act (AHERA or TSCA Title II), which mandated a regulatory program to address asbestos hazards in schools. In 1990, Congress enacted Asbestos School Hazard Abatement Reauthorization Act (ASHARA) that amended AHERA to extend some of the training, accreditation requirements, and sampling protocol to persons performing asbestos-related work in public and commercial building. The key elements to AHERA/ASHARA regulations require the development of an Operations and Maintenance (O&M) program if friable ACM (or non-friable ACM which will become friable) is present in a building.

5.3 Asbestos Sampling

The sampling protocol established within AHERA (extended to commercial buildings by ASHARA) was used to determine the required number of samples for this survey based on the type, number and location of homogeneous building materials. AHERA protocol was used to determine homogeneous areas of construction in the building. Three forms of asbestos are typically found in buildings: (1) sprayed- or toweled-on surfacing materials, (2) insulation on pipes, boilers and other mechanical equipment, and (3) miscellaneous forms such as floor tile, ceiling tile, roofing materials, wallboards, window glazing, etc. AHERA recommends the collection of a minimum of nine (9) samples for each suspect asbestos-containing material

(ACM). However, the minimum numbers of samples required by AHERA for sampling purposes are listed in the following table:

ALTEC SAMPLING PROTOCOL

Type of Material	Estimated Quantity	Required Samples
Sprayed or Troweled-on Surfacing Material	Greater than 5,000 SF	7
Sprayed or Troweled-on Surfacing Material	Between 1,000 and 5,000 SF	5
Sprayed or Troweled-on Surfacing Material	Less than 1,000 SF	3
Thermal System Insulation	All Quantities	3
Miscellaneous Materials	All Quantities	3

All suspect materials that were observed in the assessment area covered by the scope of work were assessed. Materials may exist in the buildings that were inaccessible at the time of the property inspection and survey. If through demolition or renovation, additional suspect materials are discovered or additional quantities of identified ACM are encountered, further testing may be required to determine the asbestos content prior to any further renovation or demolition activities.

The suspect asbestos-containing materials included in this survey were collected by the most unobtrusive means possible. When deemed necessary and approved by the Client, destructive sampling methods were employed to collect samples or to confirm location of materials beneath or behind other materials. When practical, buildings are typically surveyed in teams of two inspectors with one person documenting the proceedings of the survey, the other performing bulk sampling and other miscellaneous activities. One individual who then performs all of the survey and sampling tasks often surveys small facilities. The teams or individuals perform a preliminary visual inspection of the property to identify and quantify suspect ACM. A sampling strategy is then developed to provide representative sampling. Efforts are made to obtain samples from inconspicuous areas thus limiting the damage to surfaces and materials while still providing ample materials for analysis. Bulk samples were removed with a sharp blade that was cleaned between samples. A water mister with amended water was used to wet samples and sample areas. Appropriate health and safety procedures were utilized. Each sample is placed in a plastic bag collection container; the container is sealed, labeled and placed in a larger storage bag. Destructive inspection methods to find concealed asbestos are used only in those areas specified for renovation or demolition, and only to the extent approved by the client. Care is taken to prevent cross-contamination of the collected samples and sampling equipment is cleaned after each sample is obtained. In addition, sample containers are placed directly beneath each sample location, when feasible, to collect any materials which may become dislodged during the sampling process. Any debris

generated by the sampling is cleaned by wet-cleaning methods or by vacuuming utilizing a High Efficiency Particulate Air (HEPA) filter. Visible emissions to the outside were not permitted during the sampling, packaging, transportation, or disposal of the samples. Samples are documented by entering the sample data on hazard assessment sheets. The field number that is assigned to the collection bag at the time of sampling consists of the Altec Client Project (CP) number and the sample number or the Task number and sample number. The recorded information includes a description of the material, sample number, location, condition, accessibility, friability, damage potential, and quantity of homogeneous materials that that sample represents.

5.4 Asbestos Analysis

LA Testing located at 10772 Noel Street Los Alamitos CA, analyzed the asbestos bulk samples that were collected at this site. LA Testing is fully accredited in the analysis of asbestos samples by Polarized Light Microscopy (PLM) using Environmental Protection Agency (EPA) Method 600/R-93/116. This accreditation is provided by the United States Department of Commerce, National Institute of Standards and Technology's (NIST) National Voluntary Laboratory Accreditation Program (NVLAP).

Bulk samples were initially examined under stereoscopic microscopes at a magnification of 8X to 50X. Stereoscopic observations of each sample were made and the results were recorded. Portions of each sample were immersed in a fluid with a known refractive index. The sample was examined under polarized light using microscopes with a McCrone Dispersion Staining Objective. Optical characteristics of the fibrous material were examined to determine the mineralogy of the fiber. The observed optical characteristics include angle of extinction, sign of elongation and dispersion staining colors. Asbestos fiber content is estimated by optically comparing the quantity of non-asbestos material to asbestos fibers. The lower limit of reliable detection using PLM is 1%. Samples that contain more than 1-% asbestos are reported in percent ranges. Samples that contain asbestos in a concentration lower than the limit of reliable detection (<1%) are reported as "trace" or "<1". Samples in which no asbestos is observed are reported as "None Detected". Samples that are reported to contain between one and ten (1-10%) asbestos are typically recommended for an alternative PLM analytical method referred to as "point counting" method. Samples that contain between one and ten percent (1-10%) asbestos are not automatically re-analyzed by the point-count method unless specifically approved by the client. Altec will contact the client as soon as results are available to recommend and discuss Point Counting re-analysis. Any additional methods of analysis will be conducted with an additional cost to the client.

5.5 Asbestos Hazard Assessment

Hazard assessment sheets were filled out for each sample collected. The hazard assessment is assessed on the following criteria:

A. Condition	D. Friability
B. Accessibility	E. Exposed Surface Area of Material
C. Activity	F. Percent of Asbestos

The hazard assessment has a rating from -1 to 22. Any samples with negative numbers associated with them are considered "asbestos free". Any samples with positive numbers associated with them are positive for asbestos. Negative one (-1) is indicative of the least hazardous or "ASBESTOS FREE" condition. Twenty-two is indicative of the most hazardous condition. The hazard rating formula was designed by Altec to conform to the AHERA that regulates schools. All data contained in the hazard assessment sheets has been entered into our computer database for future reference.

Proper utilization of the survey data will ensure cost effectiveness and safe working conditions for employees and contractors.

Currently, there are no laws mandating the removal of ACM from private industry facilities. Management must, however, ensure control of ACM to comply with regulations and standards for worker safety.

5.6 Limitations of Inspection

The work that was performed during this investigation was done at the request of the client or the client's representative. The investigation was done so in a non-destructive manner. No repairs of the materials sampled were undertaken in the execution of this survey.

Materials may exist in inaccessible or hidden areas of the facility that were not observed or inspected during this investigation. This inspection was conducted as a complete facility survey or inspection but due to the inaccessibility of some areas and cavities in the buildings hidden materials may exist, that will only be accessible through demolition. Hidden materials may include, but are not limited to: Thermal systems insulation (TSI) covered with metal jacketing, gasket material at pipe connections between flanges, vent pipe or duct insulation within wall cavities, vinyl floor tile or sheet flooring beneath sub-floors or overlays, spray-on acoustic texture hidden by door jams or covered with drywall.

The quantification of the asbestos-containing materials are estimates made at the time of sampling. The quantities are estimates only and should be verified by the contractors bidding the project to determine exact square footage's and the accessibility of the specific materials.

The opinions and conclusions presented here are based on field investigation, and observations made in the field, and are consistent with practices and actions of consulting professionals in the asbestos and industrial hygiene field.

5.7 Asbestos Removal

Any asbestos-containing materials that are present in or on the structures and will be impacted by any planned renovation/demolition activities must be properly removed or controlled by a registered and licensed asbestos contractor before any renovation/demolition work begins.

Licensed asbestos abatement contractors with the proper bonding and experience in similar asbestos projects must perform all work involving the removal of asbestos-containing materials.

A variety of federal, state and local regulations govern the way building owners must deal with ACM in their facilities. State and local regulations may be more stringent than federal standards and often change rapidly. The management and removal of asbestos in schools, commercial and public buildings is regulated by many different agencies under several different laws. The following is a listing of laws pertaining to asbestos sampling, assessment, management, removal, transportation and disposal.

- OSHA Construction Industry Standard for Asbestos (29 CFR 1926.1101)
- OSHA General Industry Asbestos Standard (29 CFR 1910.1001)
- OSHA Respiratory Protection Standard (29 CFR1910.134)
- Cal/OSHA Title 8 Section 1529 Asbestos Standards
- EPA's Worker Protection Rule (40 CFR 763 Subpart G)
- EPA National Emission Standard for Hazardous Air Pollutants (NESHAP) (40 CFR 61 Subpart M)
- EPA Asbestos Hazard Emergency Response Act (AHERA) Regulations (40 CFR 763 Subpart E)
- EPA Asbestos Ban and Phase out Rule (40 CFR 763 Subpart I)
- Applicable New Mexico Environment Department Air Quality Bureau (AQB) Regulations
- Applicable New Mexico Occupational Health and Safety Bureau (OHSB) of the Environment Department Regulations
- Applicable New Mexico Construction Industries Division Regulations

Compliance with regulatory agencies must be maintained in order to avoid legal liability from exposure to workers and the environment.

ASBESTOS SURVEY REPORT

Prepared for:
New Mexico Veterans Affairs Health Care System
Albuquerque, New Mexico
Contract Number: GS-10F-0328R
Order Number: VA258-Q-0471

Included Buildings:
10, 10A, 41, 42, 43, 43A, 45, 46, 49, 49A, 50, 51, 52, 53, 54, 55, 56, 64, 66, 67, 67A, 94, T3, T15C, T15D, T51, T60, T71, T72, T73 and T74

1.0 INTRODUCTION

This report provides the results of a survey for asbestos-containing materials (ACMs) completed for thirty-one (31) buildings within the Raymond G. Murphy New Mexico Veterans Affairs Health Care System (NMVAHCS) located at 1501 San Pedro SE in Albuquerque, New Mexico (Site).

MEC^X conducted the survey in order to meet requirements that are compliant with the EPA Asbestos Hazard Emergency Response Act (AHERA) regulations (40 CFR 763), National Emissions Standards for Hazardous Air Pollutants (NESHAP) regulations (40 CFR 61, Subpart M), The Asbestos Hazard Emergency Response Act (AHERA), 40 CFR 763, *the Occupational Safety and Health Administration (OSHA) Asbestos Standards (29 CFR 1910.1001 and 29 CFR 1926.1101) and the local New Mexico Environment Department Air Quality Bureau (CABQ) and the New Mexico Occupational Health and Safety* Bureau (OHSB) rules, regulations and guidelines for renovation/demolition

MEC^X representatives Mr. Matthew Haak (TDSHS License 10-5791) and Mr. James Murray (TDSHS License 10-5776), are Texas Department of State Health Services (TDSHS) licensed Asbestos Consultants.

TDSHS licensing and training meet the EPA Asbestos Model Accreditation Plan (MAP) requirements. Training for asbestos professionals is required under the EPA Asbestos MAP which EPA issued under the Asbestos Hazard Emergency Response Act of 1986 (AHERA). The MAP requires the use of trained and accredited asbestos professionals when conducting asbestos inspections or designing or conducting response actions at schools and public and commercial buildings. It provides guidance to states on the minimum training requirements for accrediting asbestos professionals. State training programs must be at least as stringent as the MAP. The MAP established five required training disciplines:

- Worker;
- Contractor/supervisor;
- Inspector;
- Management planner; and
- Project designer

As licensed Asbestos Consultants, MEC^X's representatives are accredited to perform the functions of the five disciplines.

MEC^X completed the survey on August 16-20, 2105 and October 5-7, 2015.

The following buildings, as specified by representatives of the NMVAHCS, were included in this survey:

Building No.	Building Use	Year Built	Number of Floors	Approximate Square Feet (sf)
10	Research- Administration	2014	3	10,000
10A	Electric Room	2014	1	336
41	Clinical-Administrative-Hospital-Interstitial	1986	13	577,353
42	Electrical Vault and Emergency Generator Room	1986	1	2,884
43	Energy Plant	2006	3	14,280
43A	Energy PlantPump House	2012	1	486
45	Spinal Cord Injury	1991	1	53,721

Building No.	Building Use	Year Built	Number of Floors	Approximate Square Feet (sf)
46	Warehouse	1986	1	21,688
49	MRI	1990	2	7,500
49A	MRI	1993	2	2,218
50	GU Clinic	1992	1	3,290
51	Warehouse	1982	1	1,200
52	Mental Health Administration	2012	1	7,343
53	Behavioral Health Care	2013	2	17,607
54	Hospital - Patient Overnight Housing	2010	1	3,626
55	Hospital – Patient Overnight Housing	2008	1	3,496
56	Projects and ContractsOffice	2008	1	8,848
64	Well House	1996	1	576
66	Research- Administration	2011	1	4,620
67	Research- Administration	2011	1	4,180
67A	Research-Electrical	2012	1	400
94	Pump House	2013	1	190
T3	Warehouse	1984	1	5000
T15C	Employee Fitness-Police	1980	1	2320
T73	Linen StorageWarehouse	2011	1	1,650
T74	Research StorageWarehouse	2011	1	1,500

As directed by NMVAHCS personnel at the time of the inspection, MEC^X did not access or inspect the building roofs during this survey. Therefore, MEC^X did not collect samples of the roofing materials. In addition, there may be suspect asbestos-containing materials located on the roof such as but not limited to heating, ventilating, and air conditioning (HVAC), duct seam, patching and penetration tar and thermal system insulation (TSI) on pipes. Suspect materials located on the roofs must be assumed to be asbestos-containing until such time they have been tested and shown otherwise.

2.0 SCOPE OF WORK

The objective of this survey, as defined by the client, was to collect representative samples of suspect friable and non-friable ACMs located in the interior building spaces and exterior suspect Asbestos- Containing Building Materials (ACBM), excluding Roofs and Roofing Material. In addition to collection ACM samples, the assessment of the condition of the suspect materials and quantified materials containing asbestos was to be noted. The assessment, sampling and subsequent analysis was conducted in order to identify ACMs within the NMVAHCS facility.

In addition to the collection and analysis of bulk samples, MEC^X will review, update and incorporate new findings into the existing NMVAHCS Asbestos Management and Operations Plan.

2.1 METHODOLOGY

The survey consisted of inspections of reasonably accessible building components to identify suspect ACM. MEC^X's representatives, TDSHS licensed Asbestos Inspector/Consultant, collected samples of suspect ACM in accordance with the EPA Model Accreditation Plan specified in the AHERA.

The collected samples were placed in polyethylene bags, given unique sample numbers and transported for analysis (following chain-of-custody protocol) to Loflin Environmental Services, Inc. (Loflin), in Houston, Texas, which is a TDSHS licensed asbestos laboratory. Loflin is a participating member in the National Institute of Standards and Technology (NIST) administered by the National Voluntary Laboratory Accreditation Program (NVLAP). Bulk samples submitted for testing were analyzed for asbestos content by polarized light microscopy (PLM).

The laboratory analyzed the bulk samples using PLM, according to protocol of the United States (U.S.) Environmental Protection Agency (U.S. EPA) Analytical Method EPA/600/R-93/116. The USEPA defines an ACM as material that contains greater than one (1) percent asbestos by PLM analysis (NESHAP 40 CFR Part 61, Subpart M). When the bulk samples contained more than one layer, the laboratory analyzed layers of the sample.

Suspect samples containing less than or equal to one percent asbestos are not to be considered ACM by regulatory definition. If lab analysis found the material samples were asbestos-containing, then the material has to potential to be considered a regulated asbestos-containing material (RACM), according the EPA's NESHAP regulation for renovations and demolitions (reference 40 CFR Part 61).

Suspect ACMs were classified as either friable or non-friable during the inspection. ACMs also were classified as either friable or non-friable.

- Friable ACMs are those that contain more than one percent asbestos and, when dry, can be crumbled, pulverized or reduced to powder by hand pressure. Friable ACMs are considered RACM and, therefore, subject to EPA regulations.
- Non-friable ACMs cannot be crushed with hand pressure. Non-friable ACMs are categorized as either Category I or Category II materials.
    - Category I - non-friable asbestos-containing packings, gaskets, resilient floor covering and asphalt roofing products.
    - Category II - non-friable ACMs, excluding Category I non-friable ACMs.

2.2 SURVEY DESCRIPTION

MEC^X collected approximately 710 representative bulk samples of accessible interior suspect asbestos-containing materials. Suspect ACMs may exist in inaccessible and/or hidden areas of the structures that were not observed or inspected during this investigation. This inspection was a comprehensive survey, but due to the inaccessibility of some areas, hidden materials may exist that would only be accessible through destructive measures (which was outside the scope of this survey).

MEC^X conducted a limited survey of the building exteriors. As directed by NMVAHCS personnel, MEC^X did not access or inspect the roofs during this survey. Therefore, MEC^X did not collect samples of roofing materials. In addition to the roofing materials there may be suspect materials located on the roof such as but not limited to HVAC duct seam, patching and penetration tar and TSI on pipes. Suspect materials located on the roofs must be assumed to be asbestos-containing until such time they have been tested and shown otherwise.

The quantification of the asbestos-containing materials is an estimate made at the time of sampling. The quantities are estimates only and should be verified by parties, including contractors bidding the removal to determine exact square footage's and the accessibility of the specific materials.

3.0 FINDINGS PER BUILDING

3.1 BUILDING 41

3.1.1 Building 41 - Suspect Asbestos-Containing Materials

The following table lists the homogeneous areas (HA) of suspect asbestos-containing materials identified and sampled within Building 41.

HA Materials		
1. 2 feet (ft; ‘) x2' White Recessed Grid, No Cuts	2. Gray Duct Mastic On Metal Ducts	3. 12 inch (") x12" Pink & Blue Floor Tile & Yellow Mastic
4. Sheet Vinyl Flooring, New, Blue, Tan & Faux Wood	5. 12"x12" Multi-Colored Floor Tile, Mottled With Yellow Mastic	6. 12"x12" Sand White Floor Tile & Yellow Mastic
7. White Joint Compound	8. 12"x12" Floor Tile, Black Smudges & Yellow Mastic	9. Gray Pebbly
10. Heating Water Insulation Mastic	11. Faux Wood Sheet Vinyl, Narrow Strips	12. Tan Mottled Sheet Vinyl
13. 12"x12" Olive Floor Tile & Yellow Mastic	14. 2'X4' White Ceiling Tile, Small Cuts & Dots, New	15. 12"x12" Taupe Floor Tile & Yellow Mastic
16. Yellow Carpet Mastic	17. 2'X4' White Ceiling Tile, Cuts & Dots, Old	18. White Duct Insulation Mastic On Air Handler Unit
19. 12"x12" Gray Mottled Floor Tile & Yellow Mastic (Replacement Tile For FT1)	20. Steam Mastic	21. Tan Exterior Stucco & Plaster
22. Chilled Water Supply Insulation Mastic	23. Red Fire Stop	24. 2'x4' Smooth Ceiling Tile
25. Hot Water Return Insulation Mastic	26. Gray Fire Stop Plaster	27. 12"x12" Cranberry Mottled Floor Tile & Yellow Mastic
28. 12"x12" Taupe Floor Tile, Heavy Mottled & Yellow Mastic	29. Chilled Water Return Insulation Mastic	30. 12"x12" Peach Floor Tile & Yellow Mastic
31. 12"x12" Beige Floor Tile With Mottling & Yellow Mastic	32. Hot Water Supply Insulation Mastic	33. Stair Tread Black Mastic
34. Tan Sheet Vinyl	35. Red Metal Duct Mastic On Metal Duct Seams	36. 2'x2' White Ceiling Tile Dots
37. Spray Applied Fire Proofing	38. Faux Wood Sheet Vinyl, Wider Strips	39. 12"x12" White Floor Tile With Gray Spots
40. Troweled Applied Fire Proofing	41. 12"x12" Green Floor Tile & Yellow Mastic	42. 2'x4' Ceiling Tile Squiggle Cuts
43. Domestic Water Insulation Mastic At Hangar At Wall	44. Metal Duct Seam Mastic	45. 4" Yellow Cove Base Mastic
46. Roof Drain Insulation Mastic	47. Sewer Drain Insulation Mastic	48. Domestic Hot Water Pipe Insulation Mastic
49. Gray Sheet Vinyl Textured	50. 2’x2’ Recessed Grid	51. AHU Insulation Mastic

HA Materials		
52. Chilled Water Supply Insulation Mastic	53. White Hot Water Supply Insulation Mastic	54. White Duct Insulation Mastic

3.1.2 Building 41 - Samples Reported as Asbestos-Containing

Sample No.	Material Description	Sample Location	Friability	Condition	% Asbestos
B41-CHWS-01	Chilled Water Supply Insulation Mastic	Building 41, 6th Floor Mechanical Room	Non-Friable	Damaged	3-5% Chrysotile
B41-CHWS-02	Chilled Water Supply Insulation Mastic	Building 41, 4th Floor Mechanical Room	Non-Friable	Damaged	3-5% Chrysotile
B41-CHWS-03	Chilled Water Supply Insulation Mastic	Building 41, Basement Mechanical Room	Non-Friable	Damaged	3-5% Chrysotile
B41-CHWR-01	Chilled Water Return Insulation Mastic	Building 41, 6th Floor Mechanical Room	Non-Friable	Damaged	3-5% Chrysotile
B41-CHWR-02	Chilled Water Return Insulation Mastic	Building 41, 4th Floor Mechanical Room	Non-Friable	Damaged	3-5% Chrysotile
B41-CHWR-03	Chilled Water Return Insulation Mastic	Building 41, Basement Mechanical Room	Non-Friable	Damaged	3-5% Chrysotile
B41-CHWX-01	Chilled Water Insulation Mastic	Building 41, Floor 5	Non-Friable	Not Damaged	3-5% Chrysotile
B41-CHWX-02	Chilled Water Insulation Mastic	Building 41, Floor 5	Non-Friable	Not Damaged	3-5% Chrysotile
B41-CHWX-03	Chilled Water Insulation Mastic	Building 41, Floor 5	Non-Friable	Not Damaged	3-5% Chrysotile
B41-HWS-01	Hot Water Supply Insulation Mastic	Building 41, 6th Floor Mechanical Room	Non-Friable	Damaged	3-5% Chrysotile
B41-HWS-03	Hot Water Supply Insulation Mastic	Building 41, Basement Mechanical Room	Non-Friable	Damaged	3-5% Chrysotile
B41-HWR-03	Hot Water Return Insulation Mastic	Building 41, Basement Mechanical Room City Water	Non-Friable	Damaged	3-5% Chrysotile
B41-HWR-04A	Hot Water Return Insulation Mastic	Building 41, Floor 3 Mechanical Room 3A-130	Non-Friable	Not Damaged	3-5% Chrysotile
B41-HWX-01	Heating Water Insulation Mastic	Building 41, Floor 5	Non-Friable	Not Damaged	3-5% Chrysotile
B41-HWX-02	Heating Water Insulation Mastic	Building 41, Floor 5	Non-Friable	Not Damaged	3-5% Chrysotile

Sample No.	Material Description	Sample Location	Friability	Condition	% Asbestos
B41-HWX-03	Heating Water Insulation Mastic	Building 41, Floor 5	Non-Friable	Not Damaged	3-5% Chrysotile
B41-DWS-02	Domestic Water Insulation Mastic At Hangar At Wall	Building 41, Basement Mechanical Room	Non-Friable	Damaged	3-5% Chrysotile
B41-RFS-03	Sewer Drain Insulation Mastic	Building 41, Floor 5 Interstitial	Non-Friable	Not Damaged	3-5% Chrysotile
B41-RFS-04	Sewer Drain Insulation Mastic	Building 41, Floor 5 Interstitial	Non-Friable	Not Damaged	2-4% Chrysotile
B41-DS1-01	White Duct Insulation Mastic	Building 41, 6-7 Interstitial Space	Non-Friable	Damaged	3-5% Chrysotile
B41-DS1-04	White Duct Insulation Mastic	Building 41, Interstitial Spaces	Non-Friable	Not Damaged	3-5% Chrysotile
B41-DS1-05	White Duct Insulation Mastic	Building 41, Interstitial Spaces	Non-Friable	Not Damaged	3-5% Chrysotile
B41-DS1-06	White Duct Insulation Mastic	Building 41, Interstitial Spaces	Non-Friable	Not Damaged	3-5% Chrysotile
B41-DS1-07	White Duct Insulation Mastic	Building 41, Interstitial Spaces	Non-Friable	Not Damaged	3-5% Chrysotile
B41-DS2-02	White Duct Insulation Mastic On Air Handler Unit	Building 41, 5th Floor Mechanical Room	Non-Friable	Not Damaged	3-5% Chrysotile
B41-DS2-04	AHU Insulation Mastic	Building 41, Floor 6	Non-Friable	Not Damaged	3-5% Chrysotile
B41-DS2-05	AHU Insulation Mastic	Building 41, Floor 5	Non-Friable	Not Damaged	3-5% Chrysotile
B41-DS2X-01	AHU Insulation Mastic	Building 41, Floor 5	Non-Friable	Not Damaged	3-5% Chrysotile
B41-DS2X-03	AHU Insulation Mastic	Building 41, Floor 5	Non-Friable	Not Damaged	3-5% Chrysotile
B41-STMX-01	Steam Insulation Mastic	Building 41, Floor 5	Non-Friable	Not Damaged	3-5% Chrysotile
B41-STMX-02	Steam Insulation Mastic	Building 41, Floor 5	Non-Friable	Not Damaged	3-5% Chrysotile
B41-STMX-03	Steam Insulation Mastic	Building 41, Floor 5	Non-Friable	Not Damaged	3-5% Chrysotile

Sample No.	Material Description	Sample Location	Friability	Condition	% Asbestos
B41-HWS-04	Hot Water Supply Insulation Mastic	Building 41, Floor 7 Penthouse	Non-Friable	Not Damaged	3-5% Chrysotile

3.1.3 Building 41 - Asbestos-Containing Materials Inventory Summary

3.1.3.1 Quad A Mechanical Rooms

Room Number	Estimated Quantity Mechanical Room Pipe Insulation Mastics/Mastics at Air Handler Unit (AHU)	Estimated Quantity AHU Mastic/Mastic on AHU Duct Insulation	Other	Category Material
BA-114	40 linear (lin.) ft	None ID		Category II Non-Friable
1A-127	20 lin. ft.	200 sf		Category II Non-Friable
2A-112	20 lin. ft.	150 sf		Category II Non-Friable
3A-130	20 lin. ft.	150 sf		Category II Non-Friable
4A-112	20 lin. ft.	150 sf		Category II Non-Friable
5A-136	20 lin. ft.	Non suspect		Category II Non-Friable
6A-113	20 lin. ft.	150 sf		Category II Non-Friable

3.1.3.2 Quad B Mechanical Rooms

Room Number	Estimated Quantity Mechanical Room Pipe Insulation Mastics/Mastics at AHU	Estimated Quantity AHU Mastic/Mastic on AHU Duct Insulation	Other	Category Material
BB-111	36 lin. ft.	200 sf	200 sf tank insulation Mastic	Category II Non-Friable
1B-117	40 lin. ft.	400 sf		Category II Non-Friable
2B-117	Non suspect	Non suspect		Category II Non-Friable
3B-127	15 lin. ft.	200 sf		Category II Non-Friable
4B-117	30 lin. ft.	200 sf		Category II Non-Friable
5B-161	25 lin. ft.	200 sf		Category II Non-Friable

Room Number	Estimated Quantity Mechanical Room Pipe Insulation Mastics/Mastics at AHU	Estimated Quantity AHU Mastic/Mastic on AHU Duct Insulation	Other	Category Material
B-141A	HW 150 lin. ft. CHW 150 lin. ft. Dom W 3 lin. ft.			Category II Non-Friable
B-141	HW 100 lin. ft. CHW 100 lin. ft.			Category II Non-Friable

3.1.3.3 Quad C Mechanical Rooms

Room Number	Estimated Quantity Mechanical Room Pipe Insulation Mastics/Mastics at AHU	Estimated Quantity AHU Mastic/Mastic on AHU Duct Insulation	Other	Category Material
BC-111	36 lin. ft.	200 sf	200 sf tank insulation Mastic	Category II Non-Friable
BC-112	70 lin. ft.	None ID		Category II Non-Friable
1C-111	30 lin. ft.	350 sf		Category II Non-Friable
2C-167	8 lin. ft.	350 sf		Category II Non-Friable
3C-119A	90 lin. ft.	400 sf		Category II Non-Friable
4C-136	15 lin. ft.	200 sf		Category II Non-Friable
5C-157	140 lin. ft.	450 sf	CHW 50', HW 60', STM 30'	Category II Non-Friable

3.1.3.4 Quad D Mechanical Rooms

Room Number	Estimated Quantity Mechanical Room Pipe Insulation Mastics/Mastics at AHU	Estimated Quantity AHU Mastic/Mastic on AHU Duct Insulation	Other	Category Material
BD-121	70 lin. ft.	500 sf		Category II Non-Friable
1D-112	12 lin. ft.	250 sf		Category II Non-Friable
2D-126	15 lin. ft.	300 sf		Category II Non-Friable
3D-127	20 lin. ft.	150 sf		Category II Non-Friable
4D-140	20 lin. ft.	150 sf		Category II Non-Friable

Room Number	Estimated Quantity Mechanical Room Pipe Insulation Mastics/Mastics at AHU	Estimated Quantity AHU Mastic/Mastic on AHU Duct Insulation	Other	Category Material
5D-122	20 lin. ft.	150 sf		Category II Non-Friable
6D-127	12 lin. ft.	200 sf		Category II Non-Friable

3.1.3.5 Building 41 - Interstitial Spaces

Interstitial Space	Estimated Quantity Mastics/Mastics HVAC Duct Insulation	Estimated Quantity Mastic/Mastic on Drain Pipe Insulation	Category Material
Basement - First	15,500 sf	750 lin ft	Category II Non-Friable
First – Second	15,500 sf	750 lin ft	Category II Non-Friable
Second – Third	15,500 sf	750 lin ft	Category II Non-Friable
Third – Fourth	15,500 sf	750 lin ft	Category II Non-Friable
Fourth – Fifth	15,500 sf	750 lin ft	Category II Non-Friable
Fifth-Sixth	7,500 sf	500 lin ft	Category II Non-Friable
Sixth – Seventh	1,500 sf	150 lin ft	Category II Non-Friable

3.1.4 Building 41 - Inspection Notes

MEC^X sampled and determined the pipe risers relating to the mechanical systems located within the mechanical rooms do not contain asbestos.

Mechanical system piping contains TSI mastic. The TSI mastic at the junctions of the piping with the AHUs is ACM. The ACM TSI, in most cases, extends away from AHUs and then the TSI has apparently been replaced with newer TSI which is not ACM. The location where the ACM TSI transitions to non-ACM TSI varies at each location.

Asbestos-containing air handler insulation mastic was determined through sampling to be associated with the return air side of the air handling units. It appears coil and supply side of the air handler units are a different homogeneous area and do not contain asbestos.

3.1.5 Building 41 - Conclusions

According to NESHAPS 40 CFR 61 Subpart M, 61.145, friable or potentially friable ACM which will be disturbed or has the potential to be disturbed during renovation, must be removed. A licensed asbestos consultant should be consulted prior to renovation operations in a building or other structure containing ACM. The ABQ requires that Asbestos Contractors must comply with the remediation and 40-hour contractor supervisor training requirements of the Asbestos NESHAP, 40 CFR 61 Subpart M. Asbestos

contractors are required to have a GB-98 general contractor's license and a GS-29 special contractor's license from the Construction Industries Division.

Based upon the results of this inspection, the materials identified in Section 3.1.2 above should be considered as asbestos containing. MEC^X recommends that damaged asbestos-containing materials be removed in accordance with The Asbestos Hazard Emergency Response Act (AHERA) (Toxic Substances Control Act (TSCA) Title II). MEC^X recommends that the condition of the remaining asbestos-containing materials be monitored. If the asbestos-containing materials in the unaffected areas become damaged or if they will be disturbed during renovations, then the materials should be abated in accordance with applicable federal and state laws.

The quantities of asbestos-containing materials are estimates made at the time of sampling and should be used by the NMVAHCS for limited budgeting purposes only. These quantities are estimates only and should be verified by parties, including contractors bidding the removal to determine exact square footage's and the accessibility of the specific materials. No mechanical as–build drawings were provided to formulate the estimate of TSI. The TSI quantities noted in the tables are total linear feet regardless of the outside diameter (OD) or systems to which it is supporting.

The specific locations of TSI were not determined due to significant restrictions, which are as follows:

- Piping enclosed inside walls,
- Ceiling panel support/tie wires,
- Firewall extensions between floors throughout the plenums and
- The need to avoid creating/releasing dust inside the hospital.

Appendix A contains material descriptions and locations. Recommendations concerning the ACMs identified, if any, are based on condition, friability and potential for disturbance.

3.2 BUILDING 10

3.2.1 Building 10 - Suspect Asbestos-Containing Materials

The following table lists the HA suspect asbestos-containing materials identified and sampled within Building 10.

HA Materials		
1. 12"x12" Beige Floor Tile, Mottled & Yellow Mastic	2. 2'x4' Ceiling Tile With 2'x2' Recess Pattern	3. Steam Hard Fittings & Elbows, White Powder
4. Low Pressure Steam Hard Elbows & Fittings, White Powder	5. Gray Pebbly Sheet Vinyl	6. Red Fire Stop
7. Medium Pressure Steam, New	8. Chilled Water Mastic, New	9. Window Caulk
10. Stucco & Plaster	11. Blue Sheet Vinyl	12. Lab Counter Top
13. White 2'x4' Ceiling Tile	14. Brown Cove Base Mastic	15. White Joint Compound
16. Multi-Layered Floor Tile Elevator Floor	17. Heating (Hot) Water Insulation Mastic	18. Domestic Water Insulation Mastic
19. Gray Metal Duct Seam Mastic	20. White Chilled Water Supply Mastic	21. White Chilled Water Return Mastic
22. White Medium Pressure Steam Mastic	23. 12"x12" Beige Floor Tile, Mottled & Yellow Mastic Residual Black Mastic	24. Domestic Water Insulation Mastic

3.2.2 Building 10 - Samples Reported as Asbestos-Containing

Sample No.	Material Description	Sample Location	Friability	Condition	% Asbestos
B10-STM-01	Steam Hard Fittings & Elbows, White Powder	Building 10, Basement, Mechanical Room & Crawl Space	Friable	Not Damaged	1-2% Amosite
B10-STM-02	Steam Hard Fittings & Elbows, White Powder	Building 10, Basement, Mechanical Room & Crawl Space	Friable	Not Damaged	1-2% Amosite 1-2% Chrysotile
B10-STM-03	Steam Hard Fittings & Elbows, White Powder	Building 10, Basement, Mechanical Room & Crawl Space	Friable	Not Damaged	1-2% Amosite
B10-STM-04	Steam Hard Fittings & Elbows, White Powder	Building 10, Basement, Mechanical Room & Crawl Space	Friable	Not Damaged	1-2% Amosite
B10-WC-01	White Window Caulk	Exterior Window	Friable	Not Damaged	<1% Chrysotile
B10-HW-03	Heating (Hot) Water Insulation Mastic	Building 10, Basement B2	Non-Friable	Not Damaged	3-5% Chrysotile

Sample No.	Material Description	Sample Location	Friability	Condition	% Asbestos
B10-CHWR-03	White Chilled Water Return Mastic	Old Building 10, Penthouse	Non-Friable	Not Damaged	3-5% Chrysotile

3.2.3 Building 10 - Asbestos-Containing Materials Inventory Summary

Material	Category	Estimated Quantity
Crawl Space Pipe Insulation Hard Fittings & Elbows	RACM	45 fittings/elbows
Basement Mechanical Room Heating (Hot) Water Insulation Mastic	Cat II Non-Friable	50 lin ft
Penthouse Mechanical Room CWR Mastic	Cat II Non-Friable	2 fittings/elbows

3.2.4 Building 10 - Inspection Notes

Asbestos-containing chilled water return line Mastic located in the Penthouse of Old Building 10 is presumed to be limited to on return line with soft elbows.

3.2.5 Building 10 - Conclusions

According to NESHAPS 40 CFR 61 Subpart M, 61.145, friable or potentially friable ACM which will be disturbed or has the potential to be disturbed during renovation, must be removed. A licensed asbestos consultant should be consulted prior to renovation operations in a building or other structure containing ACM. The ABQ requires that Asbestos Contractors must comply with the remediation and 40-hour contractor supervisor training requirements of the Asbestos NESHAP, 40 CFR 61 Subpart M. Asbestos contractors are required to have a GB-98 general contractor's license and a GS-29 special contractor's license from the Construction Industries Division.

Based upon the results of this inspection, the materials identified in Section 3.2.2 should be considered as asbestos containing. MEC^X recommends that damaged asbestos-containing materials be removed in accordance with The Asbestos Hazard Emergency Response Act (AHERA), 40 CFR 763.90. MEC^X recommends that the condition of the remaining asbestos-containing materials be monitored. If the asbestos-containing materials in the unaffected areas become damaged or if they will be disturbed during renovations, then the materials should be abated in accordance with applicable federal and state laws.

The quantities of asbestos-containing materials are estimates made at the time of sampling and should be used by the NMVAHCS for limited budgeting purposes only. These quantities are estimates only and should be verified by parties, including contractors bidding the removal to determine exact square footage's and the accessibility of the specific materials. No mechanical as–build drawings were provided to formulate the estimate of TSI. The TSI quantities noted in the tables are total linear feet regardless of the OD or systems to which it is supporting.

The specific locations of TSI were not determined due to significant restrictions, which are as follows:

- Piping enclosed inside walls,
- Ceiling panel support/tie wires,
- Firewall extensions between floors throughout the plenums and
- The need to avoid creating/releasing dust inside the hospital.

Appendix A contains material descriptions and locations. Recommendations concerning the ACMs identified, if any, are based on condition, friability and potential for disturbance.

3.3 BUILDING 10A

3.3.1 Building 10A - Suspect Asbestos-Containing Materials

The following lists the HA suspect asbestos-containing materials identified within Building 10A.

- **None**

MEC^X inspected the above mentioned building for the presences of suspected asbestos-containing building materials. MEC^X did not identify suspect materials; therefore, samples were not collected for Building 10A.

Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

3.4 BUILDING 42

3.4.1 Building 42 - Suspect Asbestos-Containing Materials

The following table lists the HA suspect asbestos-containing materials identified and sampled within Building 42.

HA Materials		
1. White Joint Compound	2. Generator Exhaust Insulation & Mastic	3. Heating Water, Insulation & Mastic
4. Domestic Water, Insulation & Mastic	5. Exterior Tan Stucco & Gray Plaster	6. Exterior Louver Caulk

3.4.2 Building 42 - Samples Reported as Asbestos-Containing

Sample No.	Material Description	Sample Location	Friability	Condition	% Asbestos
B42-GEX-01	Generator Exhaust Insulation Mastic	Building 42, Generator Room	Non-Friable	Not Damaged	3-5% Chrysotile
B42-GEX-02	Generator Exhaust Insulation Mastic	Building 42, Generator Room	Non-Friable	Not Damaged	3-5% Chrysotile
B42-GEX-03	Generator Exhaust Insulation Mastic	Building 42, Generator Room	Non-Friable	Not Damaged	3-5% Chrysotile
B42-DW-01	Domestic Water, Insulation Mastic	Building 42, Generator Room	Non-Friable	Not Damaged	3-5% Chrysotile
B42-DW-02	Domestic Water, Insulation Mastic	Building 42, Generator Room	Non-Friable	Not Damaged	3-5% Chrysotile
B42-DW-03	Domestic Water, Insulation Mastic	Building 42, Generator Room	Non-Friable	Not Damaged	3-5% Chrysotile

3.4.3 Building 42 - Asbestos-Containing Materials Inventory Summary

Material	Category	Estimated Quantity
Generator Exhaust Insulation Mastic	Cat II Non-Friable	75 lin ft
Domestic Water, Insulation Mastic	Cat II Non-Friable	10 lin ft

3.4.4 Building 42 - Conclusions

According to NESHAPS 40 CFR 61 Subpart M, 61.145, friable or potentially friable ACM which will be disturbed or has the potential to be disturbed during renovation, must be removed. A licensed asbestos consultant should be consulted prior to renovation operations in a building or other structure containing ACM. The ABQ requires that Asbestos Contractors must comply with the remediation and 40-hour contractor supervisor training requirements of the Asbestos NESHAP, 40 CFR 61 Subpart M. Asbestos contractors are required to have a GB-98 general contractor's license and a GS-29 special contractor's license from the Construction Industries Division.

Based upon the results of this inspection, the materials identified in Section 3.4.2 should be considered as asbestos containing. MEC^X recommends that damaged asbestos-containing materials be removed be removed in accordance with The Asbestos Hazard Emergency Response Act (AHERA), 40 CFR 763.90. MEC^X recommends that the condition of the remaining asbestos-containing materials be monitored. If the asbestos-containing materials in the unaffected areas become damaged or if they will be disturbed during renovations, then the materials should be abated in accordance with applicable federal and state laws.

The quantities of asbestos-containing materials are estimates made at the time of sampling and should be used by the NMVAHCS for limited budgeting purposes only. These quantities are estimates only and should be verified by parties, including contractors bidding the removal to determine exact square footage's and the accessibility of the specific materials. No mechanical as–build drawings were provided to formulate the estimate of TSI. The TSI quantities noted in the tables are total linear feet regardless of the OD or systems to which it is supporting.

The specific locations of TSI were not determined due to significant restrictions, which are as follows:

- Piping enclosed inside walls,
- Ceiling panel support/tie wires and,
- Firewall extensions between floors throughout the plenums

Appendix A contains material descriptions and locations. Recommendations concerning the ACMs identified, if any, are based on condition, friability and potential for disturbance

3.5 BUILDING 43

3.5.1 Building 43 - Suspect Asbestos-Containing Materials

The following table lists the HA suspect asbestos-containing materials identified and sampled within Building 43.

HA Materials		
1. Boiler Feed Water Insulation & Mastic	2. Boiler Blow Down Line Insulation & Mastic	3. Boiler Chemical Feed Line Insulation & Mastic
4. Steam Header Metals Plate Coating	5. Steam Header Bleed Off	6. Steam Header Mastic
7. Boiler Feed Water Insulation & Mastic Upper	8. Boiler Economizer Panel Gasket	9. Condensate Elbow Insulation & Mastic
10. Condensate Tank Insulation & Mastic	11. Domestic Water Cold Fitting Insulation and Mastic	12. Drain Line Insulation & Mastic
13. Hot Water Line Insulation & Mastic	14. Low Pressure Steam Insulation & Mastic	15. Medium Pressure Steam Insulation & Mastic
16. Chilled Water Piping Insulation & Mastic	17. Chilled Water Piping Insulation & Mastic	18. Chilled Water Chemical Supply Lines Insulation & Mastic
19. White Joint Compound	20. 2'x4' White Ceiling Tile, Specs	21. 12"x12" Beige Mottled Floor Tile & Yellow Mastic
22. Stucco & Gray Plaster	23. White Vent Piping Insulation & Mastic	24. White Bypass Piping Insulation & Mastic

3.5.2 Building 43 - Samples Reported as Asbestos-Containing

Sample No.	Material Description	Sample Location	Friability	Condition	% Asbestos
B43-BFW-02	Boiler Feed Water Insulation Mastic	Boiler 3	Non-Friable	Damaged	3-5% Chrysotile
B43-BFW-03	Boiler Feed Water Insulation Mastic	Boiler 2	Non-Friable	Damaged	3-5% Chrysotile
B43-BFW-04	Boiler Feed Water Insulation Mastic	Boiler 2	Non-Friable	Damaged	3-5% Chrysotile
B43-BFW-05	Boiler Feed Water Insulation Mastic	Boiler 1	Non-Friable	Damaged	3-5% Chrysotile
B43-BDW-03	Boiler Blow Down Line Insulation Mastic	Center Boiler 2	Non-Friable	Damaged	3-5% Chrysotile

Sample No.	Material Description	Sample Location	Friability	Condition	% Asbestos
B43-CF-03	Boiler Chemical Feed Line Insulation Mastic	Boiler 1	Non-Friable	Damaged	2-4 % Chrysotile
B43-PLC-01	Steam Header Metals Plate Coating	Steam Header	Non-Friable	Damaged	2-3% Chrysotile
B43-SHB-01	Steam Header Bleed Off	Steam Header	Non-Friable	Damaged	2-4% Chrysotile
B43-BFWT-01	Boiler Feed Water Insulation Mastic	Boiler 1	Non-Friable	Not Damaged	3-5% Chrysotile
B43-EPG-01	Boiler Economizer Panel Gasket	Boiler 1	Non-Friable	Not Damaged	95 % Chrysotile
B43-CON-01	White Condensate Elbow/Fitting Insulation Mastic	Condensate Line Adjacent To Stairs	Non-Friable	Not Damaged	3-5% Chrysotile
B43-CON-04	White Condensate Elbow Insulation Mastic	Condensate Line Adjacent To Stairs	Non-Friable	Damaged	3-5% Chrysotile
B43-CON-05	White Condensate Elbow Insulation Mastic	Condensate Line Adjacent To Stairs	Non-Friable	Damaged	3-5% Chrysotile
B43-CTNK-02	Condensate Tank Insulation Mastic	Basement Condensate Tank	Non-Friable	Not Damaged	3-5% Chrysotile
B43-LPS-01	Low Pressure Steam Insulation Mastic	Mezzanine Low Pressure Steam Line	Non-Friable	Not Damaged	3-5% Chrysotile
B43-MPS-01	Medium Pressure Steam Insulation Mastic	Mezzanine Medium Pressure Steam Line	Non-Friable	Not Damaged	3-5% Chrysotile
B43-MPS-02	Medium Pressure Steam Insulation Mastic	Mezzanine Medium Pressure Steam Line	Non-Friable	Not Damaged	3-5% Chrysotile
B43-VNT-01	White Vent Piping Insulation Mastic	Vent Lines	Non-Friable	Not Damaged	3-5% Chrysotile
B43-VNT-02	White Vent Piping Insulation Mastic	Vent Lines	Non-Friable	Not Damaged	3-5% Chrysotile
B43-VNT-03	White Vent Piping Insulation Mastic	Vent Lines	Non-Friable	Not Damaged	3-5% Chrysotile
B43-VNT-04	White Vent Piping Insulation Mastic	Vent Lines	Non-Friable	Not Damaged	3-5% Chrysotile
B43-LPS-02	Low Pressure Steam Insulation Mastic	Mezzanine Low Pressure Steam Line	Non-Friable	Not Damaged	3-5% Chrysotile
B43-LPS-03	Low Pressure Steam Insulation Mastic	Mezzanine Low Pressure Steam Line	Non-Friable	Not Damaged	3-5% Chrysotile

3.5.3 Building 43 - Asbestos-Containing Materials Inventory Summary

Material	Category	Estimated Quantity
Boiler Feed Water Mastic	Cat II Non-Friable	60 lin ft
Boiler Blow Down Line Mastic	Cat II Non-Friable	Boiler 2 10 lin ft
Boiler Chemical Feed Line Mastic	Cat II Non-Friable	Boiler 1 10 lin ft
Condensate Elbow/Fitting Mastic	Cat II Non-Friable	150 lin ft
Condensate Tank Mastic	Cat II Non-Friable	Basement 100 sf
Low Pressure Steam Mastic	Cat II Non-Friable	Mezzanine 75 lin ft
Medium Pressure Steam Mastic	Cat II Non-Friable	Mezzanine 75 lin ft
White Vent Piping Mastic	Cat II Non-Friable	10 lin ft
Steam Header Metals Plate Coating	Cat II Non-Friable	2 sf
Steam Header Bleed Off	Cat II Non-Friable	1 fitting/elbow
Boiler Economizer Panel Gasket	Cat I	Boiler Gaskets/Seals

3.5.4 Building 43 - Conclusions

According to NESHAPS 40 CFR 61 Subpart M, 61.145, friable or potentially friable ACM which will be disturbed or has the potential to be disturbed during renovation, must be removed. A licensed asbestos consultant should be consulted prior to renovation operations in a building or other structure containing ACM. The ABQ requires that Asbestos Contractors must comply with the remediation and 40-hour contractor supervisor training requirements of the Asbestos NESHAP, 40 CFR 61 Subpart M. Asbestos contractors are required to have a GB-98 general contractor's license and a GS-29 special contractor's license from the Construction Industries Division.

Based upon the results of this inspection, the materials identified in Section 3.5.2 should be considered as asbestos containing. MEC^X recommends that damaged asbestos-containing materials be removed be removed be removed in accordance with The Asbestos Hazard Emergency Response Act (AHERA), 40 CFR 763.90. MEC^X recommends that the condition of the remaining asbestos-containing materials be monitored. If the asbestos-containing materials in the unaffected areas become damaged or if they will be disturbed during renovations, then the materials should be abated in accordance with applicable federal and state laws.

The quantities of asbestos-containing materials are estimates made at the time of sampling and should be used by the NMVAHCS for limited budgeting purposes only. These quantities are estimates only and should be verified by parties, including contractors bidding the removal to determine exact square footage's and the accessibility of the specific materials. No mechanical as–build drawings were provided to formulate the estimate of TSI. The TSI quantities noted in the tables are total linear feet regardless of the OD or systems to which it is supporting.

The specific locations of TSI were not determined due to significant restrictions, which are as follows:

- Piping enclosed inside walls,
- Ceiling panel support/tie wires and,

- Firewall extensions between floors throughout the plenums

Appendix A contains material descriptions and locations. Recommendations concerning the ACMs identified, if any, are based on condition, friability and potential for disturbance

3.6 BUILDING 43A

3.6.1 Building 43A - Suspect Asbestos-Containing Materials

The following table lists the HA suspect asbestos-containing materials identified and sampled within Building 43A.

HA Materials		
1. White Pipe Mastic Mastic	2. Stucco & Gray Plaster	

3.6.2 Building 43A - Samples Reported as Asbestos-Containing

Using PLM, the laboratory analyzed samples in the above list. Samples of the following materials contained greater than one percent (1%) asbestos as follows:

- ***None***

3.6.3 Building 43A - Asbestos-Containing Materials Inventory Summary

- ***None***

The samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory did not contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

Appendix A contains material descriptions and locations. Recommendations concerning the ACMs identified, if any, are based on condition, friability and potential for disturbance

3.7 BUILDING 45

3.7.1 Building 45 - Suspect Asbestos-Containing Materials

The following table lists the HA suspect asbestos-containing materials identified and sampled within Building 45.

HA Materials		
1. 12"x12" Beige Floor Tile, Specks & Yellow Mastic	2. 12"x12" Light Green, Mottled Floor Tile & Yellow Mastic	3. White Joint Compound
4. 12"x12" Gray, Mottled Floor Tile & Yellow Mastic	5. Green Cove Base & Yellow Mastic	6. White 2'x4' Ceiling Tile
7. Medium Pressure Steam Insulation & Mastic	8. Condensate Lines Insulation & Mastic	9. Red Metal Duct Seam Mastic
10. White Duct Insulation Mastic	11. White Metal Duct Seam Mastic	12. Red Fire Stop
13. Gray Metal Duct Seam Mastic	14. Hot Water Insulation & Mastic	15. Chilled Water System Insulation & Mastic
16. White Metal Duct Seam Mastic	17. Tan Stucco & Gray Plaster	18. 12"x12" Beige Floor Tile, Inclusions & Yellow Mastic

3.7.2 Building 45 - Samples Reported as Asbestos-Containing

Using PLM, the laboratory analyzed samples in the above list. Samples of the following materials contained greater than one percent (1%) asbestos as follows:

- ***None***

3.7.3 Building 45 - Asbestos-Containing Materials Inventory Summary

- ***None***

The samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory did not contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

3.8 BUILDING 46

3.8.1 Building 46 - Suspect Asbestos-Containing Materials

The following table lists the HA suspect asbestos-containing materials identified and sampled within Building 46.

HA Materials		
1. 2'x4' White Ceiling Tile, Specs, Brown Back	2. 2'x4' White Ceiling Tile, Star Dots	3. Gray Duct Mastic Metal Duct Seams
4. White Joint Compound	5. 12"x12" White Floor Tile & Black Mastic	6. 12"x12" Beige Floor Tile, Mottled & Yellow Mastic
7. Residual Black Mastic Beneath Carpet Squares In Large Office Area		

3.8.2 Building 46 - Samples Reported as Asbestos-Containing

Sample No.	Material Description	Sample Location	Friability	Condition	% Asbestos
B46-FT1-01	12"x12" White Floor Tile & Black Mastic	Building 46, Large Office, Room 110 & Warehouse Office	Non-Friable	Not Damaged	5-7% Chrysotile
B46-FT1-02	12"x12" White Floor Tile & Black Mastic	Building 46, Large Office, Room 110 & Warehouse Office	Non-Friable	Not Damaged	5-7% Chrysotile
B46-FT1-03	12"x12" White Floor Tile & Black Mastic	Building 46, Large Office, Room 110 & Warehouse Office	Non-Friable	Not Damaged	5-7% Chrysotile
B46-RBM-01	Residual Black Mastic Beneath Carpet Squares In Large Office Area	Large Office Area	Non-Friable	Not Damaged	6-8% Chrysotile
B46-RBM-02	Residual Black Mastic Beneath Carpet Squares In Large Office Area	Large Office Area	Non-Friable	Not Damaged	6-8% Chrysotile
B46-RBM-03	Residual Black Mastic Beneath Carpet Squares In Large Office Area	Large Office Area	Non-Friable	Not Damaged	6-8% Chrysotile

3.8.3 Building 46 - Asbestos-Containing Materials Inventory Summary

Material	Category	Estimated Quantity
Black Floor Tile Mastic	Cat II Non-Friable	2,000 sf

3.8.4 Building 46 - Conclusions

According to NESHAPS 40 CFR 61 Subpart M, 61.145, friable or potentially friable ACM which will be disturbed or has the potential to be disturbed during renovation, must be removed. A licensed asbestos consultant should be consulted prior to renovation operations in a building or other structure containing ACM. The ABQ requires that Asbestos Contractors must comply with the remediation and 40-hour contractor supervisor training requirements of the Asbestos NESHAP, 40 CFR 61 Subpart M. Asbestos contractors are required to have a GB-98 general contractor's license and a GS-29 special contractor's license from the Construction Industries Division.

Based upon the results of this inspection, the materials identified in Section 3.8.2 above should be considered as asbestos containing. MEC^X recommends that damaged asbestos-containing materials be removed be removed be removed be removed in accordance with The Asbestos Hazard Emergency Response Act (AHERA), 40 CFR 763.90. MEC^X recommends that the condition of the remaining asbestos-containing materials be monitored. If the asbestos-containing materials in the unaffected areas become damaged or if they will be disturbed during renovations, then the materials should be abated in accordance with applicable federal and state laws.

Appendix A contains material descriptions and locations. Recommendations concerning the ACMs identified, if any, are based on condition, friability and potential for disturbance.

3.9 BUILDING 49 & 49A

3.9.1 Buildings 49 & 49A - Suspect Asbestos-Containing Materials

The following table lists the HA suspect asbestos-containing materials identified and sampled within Building 49 & 49A.

HA Materials		
1. 12"x12" Cranberry Floor Tile & Yellow Mastic	2. 12"x12" Gray Floor Tile & Yellow Mastic	3. 2'x4' White Ceiling Tile With 2'x2' Recessed Pattern
4. 2'x2' White Ceiling Tile, Specs	5. 2'x4' White Ceiling Tile With 1'x1' Recessed Pattern	6. White Joint Compound
7. No Drip Tape, Black	8. Chilled Water Insulation & Mastic, White	9. Hot Water Insulation & Mastic, White
10. High Pressure Steam Insulation & Mastic, White	11. Condensate Insulation & Mastic, White	12. White Duct Insulation Mastic
13. Red Duct Mastic, Metal Duct Seams		

3.9.2 Buildings 49 & 49A - Samples Reported as Asbestos-Containing

Using PLM, the laboratory analyzed samples in the above list. Samples of the following materials contained greater than one percent (1%) asbestos as follows:

- ***None***

3.9.3 Buildings 49 & 49A - Asbestos-Containing Materials Inventory Summary

- ***None***

The samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory did not contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

Appendix A contains material descriptions and locations. Recommendations concerning the ACMs identified, if any, are based on condition, friability and potential for disturbance.

3.10 BUILDING 50

3.10.1 Building 50 - Suspect Asbestos-Containing Materials

The following table lists the HA suspect asbestos-containing materials identified and sampled within Building 50.

HA Materials		
1. 2'x4' White Ceiling Tile, Cuts & Dots	2. 12"x12" Multi-Colored Floor Tile, Heavy Mottled	3. White Joint Compound
4. Faux Wood Vinyl Flooring	5. 12"x12" Mauve Floor Tile & Yellow Mastic	

3.10.2 Building 50 - Samples Reported as Asbestos-Containing

Using PLM, the laboratory analyzed samples in the above list. Samples of the following materials contained greater than one percent (1%) asbestos as follows:

- ***None***

3.10.3 Building 50 - Asbestos-Containing Materials Inventory Summary

- ***None***

The samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory did not contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

Appendix A contains material descriptions and locations. Recommendations concerning the ACMs identified, if any, are based on condition, friability and potential for disturbance.

3.11 BUILDING 51

3.11.1 Building 51 - Suspect Asbestos-Containing Materials

The following lists the HA suspect asbestos-containing materials identified within Building 51.

- **None**

MEC^X inspected the above mentioned building for the presences of suspected asbestos-containing building materials. MEC^X did not identify suspect materials; therefore, samples were not collected for Building 51.

Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

3.12 BUILDING 52

3.12.1 Building 52 - Suspect Asbestos-Containing Materials

The following table lists the HA suspect asbestos-containing materials identified and sampled within Building 52.

HA Materials		
1. 12"x12" Brown Floor Tile & Yellow Mastic	2. White 2'x4' Ceiling Tile, Specs	3. White Joint Compound
4. Heating Water Insulation & Mastic, White	5. Red Fire Stop	6. Faux Wood Vinyl Flooring
7. Chilled Water Insulation & Mastic, White	8. Heating Water Insulation & Mastic, White	

3.12.2 Building 52 - Samples Reported as Asbestos-Containing

Using PLM, the laboratory analyzed samples in the above list. Samples of the following materials contained greater than one percent (1%) asbestos as follows:

- ***None***

3.12.3 Building 52 - Asbestos-Containing Materials Inventory Summary

- ***None***

The samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory did not contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

Appendix A contains material descriptions and locations. Recommendations concerning the ACMs identified, if any, are based on condition, friability and potential for disturbance.

3.13 BUILDING 53

3.13.1 Building 53 - Suspect Asbestos-Containing Materials

The following table lists the HA suspect asbestos-containing materials identified and sampled within Building 53.

HA Materials		
1. Domestic Water Insulation & Mastic, White	2. Heating Water Insulation & Mastic, White	3. Chilled Water Insulation & Mastic, White
4. 2'x2' Ceiling Tile, White	5. Red Fire Stop	6. 12"x12" Green Floor Tile & Yellow Mastic
7. White Joint Compound	8. Faux Wood Vinyl Strips	

3.13.2 Building 53 - Samples Reported as Asbestos-Containing

Using PLM, the laboratory analyzed samples in the above list. Samples of the following materials contained greater than one percent (1%) asbestos as follows:

- ***None***

3.13.3 Building 53 - Asbestos-Containing Materials Inventory Summary

- ***None***

The samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory did not contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

Appendix A contains material descriptions and locations. Recommendations concerning the ACMs identified, if any, are based on condition, friability and potential for disturbance.

3.14 BUILDING 54

3.14.1 Building 54 - Suspect Asbestos-Containing Materials

The following table lists the HA suspect asbestos-containing materials identified and sampled within Building 54.

HA Materials		
1. 12"x12" Beige Floor Tile, Mottled & Yellow Mastic	2. 2'x4' Ceiling Tile White, Specs	3. Yellow & Pink Fire Stop
4. Yellow Carpet Mastic		

3.14.2 Building 54 - Samples Reported as Asbestos-Containing

Using PLM, the laboratory analyzed samples in the above list. Samples of the following materials contained greater than one percent (1%) asbestos as follows:

- ***None***

3.14.3 Building 54 - Asbestos-Containing Materials Inventory Summary

- ***None***

The samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory did not contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

Appendix A contains material descriptions and locations. Recommendations concerning the ACMs identified, if any, are based on condition, friability and potential for disturbance.

3.15 BUILDING 55

3.15.1 Building 55 - Suspect Asbestos-Containing Materials

The following table lists the HA suspect asbestos-containing materials identified and sampled within Building 55.

HA Materials		
1. 12"x12" White Floor Tile, Gray Smudges & Yellow Mastic	2. 2'x4' White Ceiling Tile, Specs	3. Red Fire Stop
4. Yellow Carpet Mastic		

3.15.2 Building 55 - Samples Reported as Asbestos-Containing

Using PLM, the laboratory analyzed samples in the above list. Samples of the following materials contained greater than one percent (1%) asbestos as follows:

- ***None***

3.15.3 Building 55 - Asbestos-Containing Materials Inventory Summary

- ***None***

The samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory did not contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

Appendix A contains material descriptions and locations. Recommendations concerning the ACMs identified, if any, are based on condition, friability and potential for disturbance.

3.16 BUILDING 56

3.16.1 Building 56 - Suspect Asbestos-Containing Materials

The following table lists the HA suspect asbestos-containing materials identified and sampled within Building 56.

HA Materials		
1. White 12"x12" Floor Tile & Yellow Mastic	2. 2'x4' White Ceiling Tile, Specs	3. 2'x4' White Ceiling Tile Big Specs
4. White Joint Compound	5. Yellow Carpet Mastic	6. 12"x12" Beige Floor Tile, Mottled
7. Exterior Effis Stucco, Tan Stucco & Gray Plaster		

3.16.2 Building 56 - Samples Reported as Asbestos-Containing

Using PLM, the laboratory analyzed samples in the above list. Samples of the following materials contained greater than one percent (1%) asbestos as follows:

- ***None***

3.16.3 Building 56 - Asbestos-Containing Materials Inventory Summary

- ***None***

The samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory did not contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

Appendix A contains material descriptions and locations. Recommendations concerning the ACMs identified, if any, are based on condition, friability and potential for disturbance.

3.17 BUILDING 66

3.17.1 Building 66 - Suspect Asbestos-Containing Materials

The following table lists the HA suspect asbestos-containing materials identified and sampled within Building 66.

HA Materials		
1. 12"x12" White Floor Tile, Beige Spots	2. 2'x4' White Ceiling Tile, Specs	3. White Joint Compound

3.17.2 Building 66 - Samples Reported as Asbestos-Containing

Using PLM, the laboratory analyzed samples in the above list. Samples of the following materials contained greater than one percent (1%) asbestos as follows:

- ***None***

3.17.3 Building 66 - Asbestos-Containing Materials Inventory Summary

- ***None***

The samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory did not contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

Appendix A contains material descriptions and locations. Recommendations concerning the ACMs identified, if any, are based on condition, friability and potential for disturbance.

3.18 BUILDING 67

3.18.1 Building 67 - Suspect Asbestos-Containing Materials

The following table lists the HA suspect asbestos-containing materials identified and sampled within Building 67.

HA Materials		
1. 12"x12" White Floor Tile, Mottled & Yellow Mastic	2. Light Gray Sheet Vinyl	3. 2'x4' White Ceiling Tile
4. White Joint Compound		

3.18.2 Building 67 - Samples Reported as Asbestos-Containing

Using PLM, the laboratory analyzed samples in the above list. Samples of the following materials contained greater than one percent (1%) asbestos as follows:

- ***None***

3.18.3 Building 67 - Asbestos-Containing Materials Inventory Summary

- ***None***

The samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory did not contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

Appendix A contains material descriptions and locations. Recommendations concerning the ACMs identified, if any, are based on condition, friability and potential for disturbance.

3.19 BUILDING 67A

3.19.1 Building 67A - Suspect Asbestos-Containing Materials

The following table lists the HA suspect asbestos-containing materials identified and sampled within Building 67A.

HA Materials		
1. White Joint Compound		

3.19.2 Building 67A - Samples Reported as Asbestos-Containing

Using PLM, the laboratory analyzed samples in the above list. Samples of the following materials contained greater than one percent (1%) asbestos as follows:

- ***None***

3.19.3 Building 67A - Asbestos-Containing Materials Inventory Summary

- ***None***

The samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory did not contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

Appendix A contains material descriptions and locations. Recommendations concerning the ACMs identified, if any, are based on condition, friability and potential for disturbance.

3.20 BUILDING 94

3.20.1 Building 94 - Suspect Asbestos-Containing Materials

The following lists the HA suspect asbestos-containing materials identified within Building 94.

- **None**

MEC^X inspected the above mentioned building for the presences of suspected asbestos-containing building materials. MEC^X did not identify suspect materials; therefore, samples were not collected for Building 94.

Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

Appendix A contains material descriptions and locations. Recommendations concerning the ACMs identified, if any, are based on condition, friability and potential for disturbance.

3.21 BUILDING T74

3.21.1 Building T74 - Suspect Asbestos-Containing Materials

The following table lists the HA suspect asbestos-containing materials identified and sampled within Building T74.

HA Materials		
1. White Metal Duct Seam Mastic		

3.21.2 Building T74 - Samples Reported as Asbestos-Containing

Using PLM, the laboratory analyzed samples in the above list. Samples of the following materials contained greater than one percent (1%) asbestos as follows:

- ***None***

3.21.3 Building T74 - Asbestos-Containing Materials Inventory Summary

- ***None***

The samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory did not contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

Appendix A contains material descriptions and locations. Recommendations concerning the ACMs identified, if any, are based on condition, friability and potential for disturbance.

3.22 BUILDING T15C

3.22.1 Building T15C - Suspect Asbestos-Containing Materials

The following table lists the HA suspect asbestos-containing materials identified and sampled within Building T15C.

HA Materials		
1. Faux Wood Vinyl Flooring	2. White 2'x4' Ceiling Tile, Specs	3. White Joint Compound
4. Black Mirror Mastic	5. White Joint Compound	6. Yellow Rubber Flooring Mastic
7. 2'x4' White Ceiling Tile		

3.22.2 Building T15C - Samples Reported as Asbestos-Containing

Sample No.	Material Description	Sample Location	Friability	Condition	% Asbestos
BT15C-MM-01	Black Mirror Mastic	Building T15C, Mirror	Non-Friable	Not Damaged	6-8% Chrysotile
BT15C-MM-02	Black Mirror Mastic	Building T15C, Mirror	Non-Friable	Not Damaged	6-8% Chrysotile
BT15C-MM-03	Black Mirror Mastic	Building T15C, Mirror	Non-Friable	Not Damaged	6-8% Chrysotile

3.22.3 Building T15C - Asbestos-Containing Materials Inventory Summary

Material	Category	Estimated Quantity
Mirror Mastic	Cat II Non-Friable	5 sf

3.22.3 Building T15C - Conclusions

According to NESHAPS 40 CFR 61 Subpart M, 61.145, friable or potentially friable ACM which will be disturbed or has the potential to be disturbed during renovation, must be removed. A licensed asbestos consultant should be consulted prior to any renovation operations in a building or other structure containing ACM. The ABQ requires that Asbestos Contractors must comply with the remediation and 40-hour contractor supervisor training requirements of the Asbestos NESHAP, 40 CFR 61 Subpart M. Asbestos contractors are required to have a GB-98 general contractor's license and a GS-29 special contractor's license from the Construction Industries Division.

Based upon the results of this inspection, the materials identified in Section 3.22.2 above should be considered as asbestos containing. MEC^X recommends that damaged asbestos-containing materials be removed be removed be removed be removed in accordance with The Asbestos Hazard Emergency Response Act (AHERA), 40 CFR 763.90. MEC^X recommends that the condition of the remaining asbestos-containing materials be monitored. If the asbestos-containing materials in the unaffected areas become damaged or if they will be disturbed during renovations, then the materials should be abated in accordance with applicable federal and state laws.

Appendix A contains material descriptions and locations. Recommendations concerning the ACMs identified, if any, are based on condition, friability and potential for disturbance.

3.23 BUILDING T15D

3.23.1 Building T15D - Suspect Asbestos-Containing Materials

The following table lists the HA suspect asbestos-containing materials identified and sampled within Building T15D.

HA Materials		
1. 12"x12" Gray Floor Tile, Mottled & Yellow Mastic	2. 12"x12" Green Floor Tile, Mottled & Yellow Mastic	3. White 2'x4' Ceiling Tile, Specs
4. Yellow Carpet Mastic		

3.23.2 Building T15D - Samples Reported as Asbestos-Containing

Using PLM, the laboratory analyzed samples in the above list. Samples of the following materials contained greater than one percent (1%) asbestos as follows:

- ***None***

3.23.3 Building T15D - Asbestos-Containing Materials Inventory Summary

- ***None***

The samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory did not contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

Appendix A contains material descriptions and locations. Recommendations concerning the ACMs identified, if any, are based on condition, friability and potential for disturbance.

3.24 BUILDING T60

3.24.1 Building T60 - Suspect Asbestos-Containing Materials

The following table lists the HA suspect asbestos-containing materials identified and sampled within Building T60.

HA Materials		
1. Yellow Carpet Mastic	2. 12"x12" Gray Floor Tile, Mottled & Black Mastic	3. 12"x12" Pink Floor Tile, Mottled & Black Mastic
4. 12"x12" Green Floor Tile Laid On-top of Gray Floor Tile		

3.24.2 Building T60 - Samples Reported as Asbestos-Containing

Using PLM, the laboratory analyzed samples in the above list. Samples of the following materials contained greater than one percent (1%) asbestos as follows:

- ***None***

3.24.3 Building T60 - Asbestos-Containing Materials Inventory Summary

- ***None***

The samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory did not contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

Appendix A contains material descriptions and locations. Recommendations concerning the ACMs identified, if any, are based on condition, friability and potential for disturbance.

3.25 BUILDING T72

3.25.1 Building T72 - Suspect Asbestos-Containing Materials

The following table lists the HA suspect asbestos-containing materials identified and sampled within Building T72.

HA Materials		
1. White Joint Compound		

3.25.2 Building T72 - Samples Reported as Asbestos-Containing

Using PLM, the laboratory analyzed samples in the above list. Samples of the following materials contained greater than one percent (1%) asbestos as follows:

- ***None***

3.25.3 Building T72 - Asbestos-Containing Materials Inventory Summary

- ***None***

The samples of the above referenced suspect materials analyzed by Polarized Light Microscopy (PLM) using the Environmental Protection Agency EPA 600 method by a fully qualified third-party laboratory did not contain asbestos above 1.0 %. Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

Appendix A contains material descriptions and locations. Recommendations concerning the ACMs identified, if any, are based on condition, friability and potential for disturbance.

3.26 BUILDING T3

3.26.1 Building T3 - Suspect Asbestos-Containing Materials

The following lists the HA suspect asbestos-containing materials identified within Building T3.

- **None**

MEC^X inspected the above mentioned building for the presences of suspected asbestos-containing building materials. MEC^X did not identify suspect materials; therefore, samples were not collected for Building T3.

Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

3.27 BUILDING T51

3.27.1 Building T51 - Suspect Asbestos-Containing Materials

The following lists the HA suspect asbestos-containing materials identified within Building T51.

- **None**

MEC^X inspected the above mentioned building for the presences of suspected asbestos-containing building materials. MEC^X did not identify suspect materials; therefore, samples were not collected for Building T51.

Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

3.28 BUILDING T71

3.28.1 Building T71 - Suspect Asbestos-Containing Materials

The following lists the HA suspect asbestos-containing materials identified within Building T71.

- **None**

MEC^X inspected the above mentioned building for the presences of suspected asbestos-containing building materials. MEC^X did not identify suspect materials; therefore, samples were not collected for Building T71.

Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

3.29 BUILDING T73

3.29.1 Building T73 - Suspect Asbestos-Containing Materials

The following lists the HA suspect asbestos-containing materials identified within Building T73.

- **None**

MEC^X inspected the above mentioned building for the presences of suspected asbestos-containing building materials. MEC^X did not identify suspect materials; therefore, samples were not collected for Building T73.

Although this was a comprehensive asbestos survey do to the inaccessibility of some areas hidden suspect materials may exist within the building in areas such as above ceilings and in wall cavities.

4.0 CONCLUSIONS AND RECOMMENDATIONS

According to NESHAPS 40 CFR 61 Subpart M, 61.145, friable or potentially friable ACM which will be disturbed or has the potential to be disturbed during renovation, must be removed. A licensed asbestos consultant should be consulted prior to any renovation operations in a building or other structure containing ACM. The ABQ requires that Asbestos Contractors must comply with the remediation and 40-hour contractor supervisor training requirements of the Asbestos NESHAP, 40 CFR 61 Subpart M. Asbestos contractors are required to have a GB-98 general contractor's license and a GS-29 special contractor's license from the Construction Industries Division.

Based upon the results of this inspection, the materials herein identified as "asbestos-containing" should be considered as asbestos containing. MEC^X recommends that damaged asbestos-containing materials be removed in accordance with The Asbestos Hazard Emergency Response Act (AHERA), 40 CFR 763.90. MEC^X recommends that the condition of the remaining asbestos-containing materials be monitored. If the asbestos-containing materials in the unaffected areas become damaged or if they will be disturbed during renovations, then the materials should be abated in accordance with applicable federal and state laws.

Asbestos-containing materials that are present in or on the structures and will be affected by planned renovation/demolition activities must be properly removed or controlled by a registered and licensed asbestos contractor before renovation/demolition work begins.

Licensed asbestos abatement contractors with the proper bonding and experience in similar asbestos projects must perform work involving the removal of asbestos-containing materials.

This sampling report does not guarantee that additional ACM is not present. The scope of this inspection included the interior and exterior of the structure. Although the asbestos survey conducted was thorough in scope, it is important to identify those materials that were not encountered during the survey so that if they are encountered during renovation activities, these materials can be considered ACM until testing proves otherwise. The materials that should be assumed to contain asbestos if encountered include:

The materials that should be assumed to contain asbestos if encountered include:

- High Temperature Gaskets and Packing Materials;
- Concealed construction mastics and vapor barrier;
- Resilient floor coverings and mastic located under carpet or existing flooring; and
- Electrical panel partitions/equipment.

Should additional suspect materials, not specifically identified within this report, be encountered during construction, demolition or renovation activities, they should be treated as asbestos-containing until further asbestos bulk sampling and analysis can be performed. The analytical results pertain to only the samples analyzed and may not reflect the actual composition of the entire homogeneous area. MEC^X assumes no responsibility for subsequent use or interpretations of these analytical results. This report must not be used to claim product endorsement by NVLAP or other state or federal government agency.

Prior to the removal of asbestos-containing materials the quantities should be verified by a licensed abatement contractor.

5.0 LIMITATIONS

MEC^X warrants that the findings contained herein have been prepared with the level of skill exercised by experienced and knowledgeable environmental consultants who are appropriately licensed or otherwise trained to perform assessments pursuant to the scope of work required on this project.

The work that was performed during this investigation was done at the request of the client or the client's representative. The investigation was done so in a non-destructive manner. No repairs of the materials sampled were undertaken in the execution of this survey.

Materials may exist in inaccessible or hidden areas of the facility that were not observed or inspected during this investigation. This inspection was conducted as a complete facility survey or inspection but due to the inaccessibility of some areas and cavities in the buildings hidden materials may exist, that will only be accessible through demolition. Hidden materials may include, but are not limited to: TSI covered with metal jacketing, gasket material at pipe connections between flanges, vent pipe or duct insulation within wall cavities, vinyl floor tile or sheet flooring beneath sub-floors or overlays, spray-on acoustic texture hidden by door jams or covered with drywall.

The quantification of the asbestos-containing materials are estimates made at the time of sampling. The quantities are estimates only and should be verified by the contractors bidding the project to determine exact square footage's and the accessibility of the specific materials.

The opinions and conclusions presented here are based on field investigation and observations made in the field and are consistent with practices and actions of consulting professionals in the asbestos and industrial hygiene field.

6.0 ASBESTOS SURVEY SAMPLING STRATEGY

The following illustrates the sampling strategy employed by MEC^X:

(a) Surfacing materials - In a randomly distributed manner, an accredited asbestos inspector collected bulk samples of surfacing materials, representative of each homogeneous area, unless it was assumed to be an asbestos-containing material (ACM), as follows:

(1) Collect at least three bulk samples from each homogeneous area that is less than or equal to 1,000 ft^2.

(2) Collect at least five bulk samples from each homogeneous area that is greater than 1,000 ft^2, but less than or equal to 5,000 ft^2.

(3) Collect at least seven bulk samples from each homogeneous area that is greater than 5,000 ft^2.

(b) Thermal systems insulation - In a randomly distributed manner, an accredited asbestos inspector collected, at a minimum, three (3) bulk samples of thermal systems insulation material, representative of each homogeneous area, unless it was assumed to be ACM, as follows:

(1) An accredited asbestos inspector collected, at a minimum, one (1) bulk sample of patched thermal systems insulation, representative of each homogenous area, unless it was assumed to be ACM, providing the section of patch was less than 6 linear or square feet.

(2) An accredited asbestos inspector collected, at a minimum, three (3) representative bulk samples of each insulated mechanical system, unless it was assumed to be ACM, including, but not limited to cementitious material used on fittings such as tees, elbows or valves. Representative sampling was conducted in a manner sufficient as to identify whether each homogenous area was either asbestos or non-asbestos containing.

(c) Miscellaneous materials - An accredited asbestos inspector collected, at a minimum, three (3) representative bulk samples of each miscellaneous material not assumed to be ACM, including, but not limited to ceiling tiles, floor tiles, associated floor tile mastic, etc. Representative sampling was conducted in a manner sufficient as to identify whether each homogenous area is either asbestos or non-asbestos containing.

(d) Bulk samples are not required to be collected from homogeneous area where the accredited asbestos inspector has determined that the thermal systems insulation is a non-suspect material (e.g., fiberglass, foam glass, rubber or other non-ACM).

(e) For the purpose of this report, MEC^X has classified the asbestos-containing materials as not damaged, damaged or significantly damaged and defined as follows:

- Damaged friable miscellaneous ACM means friable miscellaneous ACM which has deteriorated or sustained physical injury such that the internal structure (cohesion) of the material is inadequate or, if applicable, which has delaminated such that its bond to the substrate (adhesion) is inadequate or which for any other reason lacks fiber cohesion or adhesion qualities. Such damage or deterioration may be illustrated by the separation of ACM into layers; separation of ACM from the substrate; flaking, blistering, or crumbling of the ACM surface; water damage; significant or repeated water stains, scrapes, gouges, mars or other signs of

physical injury on the ACM. Asbestos debris originating from the ACBM in question may also indicate damage.

- Damaged friable surfacing ACM means friable surfacing ACM which has deteriorated or sustained physical injury such that the internal structure (cohesion) of the material is inadequate or which has delaminated such that its bond to the substrate (adhesion) is inadequate, or which, for any other reason, lacks fiber cohesion or adhesion qualities. Such damage or deterioration may be illustrated by the separation of ACM into layers; separation of ACM from the substrate; flaking, blistering, or crumbling of the ACM surface; water damage; significant or repeated water stains, scrapes, gouges, mars or other signs of physical injury on the ACM. Asbestos debris originating from the ACBM in question may also indicate damage.
- Damaged or significantly damaged thermal system insulation ACM means thermal system insulation ACM on pipes, boilers, tanks, ducts, and other thermal system insulation equipment where the insulation has lost its structural integrity, or its covering, in whole or in part, is crushed, water-stained, gouged, punctured, missing, or not intact such that it is not able to contain fibers. Damage may be further illustrated by occasional punctures, gouges or other signs of physical injury to ACM; occasional water damage on the protective coverings/jackets; or exposed ACM ends or joints. Asbestos debris originating from the ACBM in question may also indicate damage.

APPENDIX A
ASBESTOS SUMMARY TABLE

Department of Veterans Affairs

		YELLOW, GUMMY (MASTIC)		NONE DETECTED	QUARTZ, OTHER

Laboratory Manager

*Asbestos-containing materials - The type and percentage of various fibrous components was determined by the microscopist in accordance with U.S. Environmental Protection Agency "Method For The Determination Of Asbestos In Bulk Samples" EPA/600/R-93/116, July 1993.
Departures from the test method: **None**
The above test report must not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. Government.
Analysis results on this test report pertain only to those materials tested.
Disclaimers: Asbestos content is quantified using Calibrated Visual Estimate. PLM analysis has been known to be inaccurate for materials with low concentrations of asbestos. Negative PLM results cannot be guaranteed. LES recommends using TEM analysis for materials reported as <1% or none detected. This report may not be reproduced, except in full, without written approval by LES

*Asbestos-containing materials - The type and percentage of various fibrous components was determined by the microscopist in accordance with U.S. Environmental Protection Agency "Method For The Determination Of Asbestos In Bulk Samples" EPA/600/R-93/116, July 1993.
Departures from the test method: **None**
The above test report must not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. Government.
Analysis results on this test report pertain only to those materials tested.
Disclaimers: Asbestos content is quantified using Calibrated Visual Estimate. PLM analysis has been known to be inaccurate for materials with low concentrations of asbestos. Negative PLM results cannot be guaranteed. LES recommends using TEM analysis for materials reported as <1% or none detected. This report may not be reproduced, except in full, without written approval by LES

L239304	FP1-01	WHITE, FIBROUS HOMOGENEOUS (FIREPROOFING)		NONE DETECTED	40% CELLULOSE 5% GLASS FIBERS CALCITE, OTHER

Laboratory Manager

*Asbestos-containing materials - The type and percentage of various fibrous components was determined by the microscopist in accordance with U.S. Environmental Protection Agency "Method For The Determination Of Asbestos In Bulk Samples" EPA/600/R-93/116, July 1993.
Departures from the test method: **None**
The above test report must not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. Government.
Analysis results on this test report pertain only to those materials tested.
Disclaimers: Asbestos content is quantified using Calibrated Visual Estimate. PLM analysis has been known to be inaccurate for materials with low concentrations of asbestos. Negative PLM results cannot be guaranteed. LES recommends using TEM analysis for materials reported as <1% or none detected. This report may not be reproduced, except in full, without written approval by LES

Report of Bulk Sample Analysis For Asbestos Identification

Polarized Light Microscopy (PLM)
EPA 600/R-93/116, July 1994

Client: MECx, INC.
Client Address: 8864 INTERCHANGE DRIVE, HOUSTON, TX 77054
Project No: 750-15-24A
Project Name: ALBUQUERQUE VA; BUILDING 41

Date Received: 08/21/2015
Date Analyzed: 08/21/2015

Lab Number	Field Number	Sample Description (Components)	Sample Location	Asbestos Detected	Additional Constituents
L239368	JC-25	WHITE, POWDERY HOMOGENEOUS (JOINT COMPOUND)		NONE DETECTED	CALCITE, QUARTZ, MICA, OTHER
L239369	JC-26	WHITE, POWDERY HOMOGENEOUS (JOINT COMPOUND)		NONE DETECTED	CALCITE, QUARTZ, MICA, OTHER
L239370	FT1-01	BEIGE, GRANULAR NONHOM (FLOOR TILE)		NONE DETECTED	CALCITE, VINYL, QUARTZ
		YELLOW, GUMMY (MASTIC)		NONE DETECTED	OTHER
L239371	FT1-02	BEIGE, GRANULAR NONHOM (FLOOR TILE)		NONE DETECTED	CALCITE, VINYL, QUARTZ
		YELLOW, GUMMY (MASTIC)		NONE DETECTED	OTHER
L239372	FT1-03	BEIGE, GRANULAR NONHOM (FLOOR TILE)		NONE DETECTED	CALCITE, VINYL, QUARTZ
		YELLOW, GUMMY (MASTIC)		NONE DETECTED	OTHER

Laboratory Manager

*Asbestos-containing materials - The type and percentage of various fibrous components was determined by the microscopist in accordance with U.S. Environmental Protection Agency "Method For The Determination Of Asbestos In Bulk Samples" EPA/600/R-93/116, July 1993.
Departures from the test method: **None**
The above test report must not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. Government.
Analysis results on this test report pertain only to those materials tested.
Disclaimers: Asbestos content is quantified using Calibrated Visual Estimate. PLM analysis has been known to be inaccurate for materials with low concentrations of asbestos. Negative PLM results cannot be guaranteed. LES recommends using TEM analysis for materials reported as <1% or none detected. This report may not be reproduced, except in full, without written approval by LES

Report of Bulk Sample Analysis For Asbestos Identification

Polarized Light Microscopy (PLM)
EPA 600/R-93/116, July 1994

Client: MECx, INC.
Client Address: 8864 INTERCHANGE DRIVE, HOUSTON, TX 77054
Project No: 750-15-24A
Project Name: ALBUQUERQUE VA; BUILDING 41

Date Received: 08/21/2015
Date Analyzed: 08/21/2015

Lab Number	Field Number	Sample Description (Components)	Sample Location	Asbestos Detected	Additional Constituents
L239417	FT11-02	WHITE, GRANULAR NONHOM (FLOOR TILE)		NONE DETECTED	CALCITE, VINYL, QUARTZ
		YELLOW, GUMMY (MASTIC)		NONE DETECTED	OTHER
		WHITE, ELASTIC (LINOLEUM)		NONE DETECTED	VINYL, CALCITE
		WHITE, FIBROUS (BACKING)		NONE DETECTED	35% CELLULOSE 15% GLASS FIBERS OTHER
L239418	FT11-03	WHITE, GRANULAR NONHOM (FLOOR TILE)		NONE DETECTED	CALCITE, VINYL, QUARTZ
		YELLOW, GUMMY (MASTIC)		NONE DETECTED	OTHER
L239419	FT12-01	WHITE, GRANULAR NONHOM (FLOOR TILE)		NONE DETECTED	CALCITE, VINYL, QUARTZ
		YELLOW, GUMMY (MASTIC)		NONE DETECTED	OTHER

Laboratory Manager

*Asbestos-containing materials - The type and percentage of various fibrous components was determined by the microscopist in accordance with U.S. Environmental Protection Agency "Method For The Determination Of Asbestos In Bulk Samples" EPA/600/R-93/116, July 1993.
Departures from the test method: **None**
The above test report must not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. Government.
Analysis results on this test report pertain only to those materials tested.
Disclaimers: Asbestos content is quantified using Calibrated Visual Estimate. PLM analysis has been known to be inaccurate for materials with low concentrations of asbestos. Negative PLM results cannot be guaranteed. LES recommends using TEM analysis for materials reported as <1% or none detected. This report may not be reproduced, except in full, without written approval by LES

*Asbestos-containing materials - The type and percentage of various fibrous components was determined by the microscopist in accordance with U.S. Environmental Protection Agency "Method For The Determination Of Asbestos In Bulk Samples" EPA/600/R-93/116, July 1993.
Departures from the test method: **None**
The above test report must not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. Government.
Analysis results on this test report pertain only to those materials tested.
Disclaimers: Asbestos content is quantified using Calibrated Visual Estimate. PLM analysis has been known to be inaccurate for materials with low concentrations of asbestos. Negative PLM results cannot be guaranteed. LES recommends using TEM analysis for materials reported as <1% or none detected. This report may not be reproduced, except in full, without written approval by LES

Report of Bulk Sample Analysis For Asbestos Identification

Polarized Light Microscopy (PLM)
EPA 600/R-93/116, July 1994

Client: MECx, INC.
Client Address: 8864 INTERCHANGE DRIVE, HOUSTON, TX 77054
Project No: 750-15-24V
Project Name: RAYMOND G. MURPHY VA, BLDG. 43; 1244.019C.00 ST002

Date Received: 08/24/2015
Date Analyzed: 09/11/2015

Lab Number	Field Number	Sample Description (Components)	Sample Location	Asbestos Detected	Additional Constituents
L240626*	B43-CON-01	WHITE, GUMMY NONHOM (INSULATION)		3-5% CHRYSOTILE	OTHER
		WHITE, FIBROUS (INSULATION)		NONE DETECTED	35% CELLULOSE CALCITE
		GRAY, FIBROUS (INSULATION)		NONE DETECTED	35% MINERAL WOOL CALCITE
L240627	B43-CON-02	WHITE, FIBROUS HOMOGENEOUS (INSULATION)		NONE DETECTED	35% CELLULOSE CALCITE
L240628	B43-SH-01	WHITE, GUMMY HOMOGENEOUS (SEALANT)		NONE DETECTED	3% CELLULOSE QUARTZ, OTHER
L240629	B43-SH-02	WHITE, GUMMY HOMOGENEOUS (SEALANT)		NONE DETECTED	3% CELLULOSE QUARTZ, OTHER
L240630	B43-SH-03	WHITE, GUMMY NONHOM (SEALANT)		NONE DETECTED	3% CELLULOSE QUARTZ, OTHER
		TAN, CRUMBLY (INSULATION)		NONE DETECTED	2% WOLLASTONITE OTHER

Laboratory Manager

*Asbestos-containing materials - The type and percentage of various fibrous components was determined by the microscopist in accordance with U.S. Environmental Protection Agency "Method For The Determination Of Asbestos In Bulk Samples" EPA/600/R-93/116, July 1993.
Departures from the test method: **None**
The above test report must not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. Government.
Analysis results on this test report pertain only to those materials tested.
Disclaimers: Asbestos content is quantified using Calibrated Visual Estimate. PLM analysis has been known to be inaccurate for materials with low concentrations of asbestos. Negative PLM results cannot be guaranteed. LES recommends using TEM analysis for materials reported as <1% or none detected. This report may not be reproduced, except in full, without written approval by LES

The above test report must not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. Government.
Analysis results on this test report pertain only to those materials tested.
Disclaimers: Asbestos content is quantified using Calibrated Visual Estimate. PLM analysis has been known to be inaccurate for materials with low concentrations of asbestos. Negative PLM results cannot be guaranteed. LES recommends using TEM analysis for materials reported as <1% or none detected. This report may not be reproduced, except in full, without written approval by LES

*Asbestos-containing materials - The type and percentage of various fibrous components was determined by the microscopist in accordance with U.S. Environmental Protection Agency "Method For The Determination Of Asbestos In Bulk Samples" EPA/600/R-93/116, July 1993.
Departures from the test method: **None**
The above test report must not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. Government.
Analysis results on this test report pertain only to those materials tested.
Disclaimers: Asbestos content is quantified using Calibrated Visual Estimate. PLM analysis has been known to be inaccurate for materials with low concentrations of asbestos. Negative PLM results cannot be guaranteed. LES recommends using TEM analysis for materials reported as <1% or none detected. This report may not be reproduced, except in full, without written approval by LES

**Asbestos-containing materials - The type and percentage of various fibrous components was determined by the microscopist in accordance with U.S. Environmental Protection Agency "Method For The Determination Of Asbestos In Bulk Samples" EPA/600/R-93/116, July 1993.*
Departures from the test method: ***None***
The above test report must not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. Government.

Disclaimers: Asbestos content is quantified using Calibrated Visual Estimate. PLM analysis has been known to be inaccurate for materials with low concentrations of asbestos. Negative PLM results cannot be guaranteed. LES recommends using TEM analysis for materials reported as <1% or none detected. This report may not be reproduced, except in full, without written approval by LES.

**Asbestos-containing materials - The type and percentage of various fibrous components was determined by the microscopist in accordance with U.S. Environmental Protection Agency "Method For The Determination Of Asbestos In Bulk Samples" EPA/600/R-93/116, July 1993.*
Departures from the test method: ***None***
The above test report must not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. Government.

Disclaimers: Asbestos content is quantified using Calibrated Visual Estimate. PLM analysis has been known to be inaccurate for materials with low concentrations of asbestos. Negative PLM results cannot be guaranteed. LES recommends using TEM analysis for materials reported as <1% or none detected. This report may not be reproduced, except in full, without written approval by LES.

*Asbestos-containing materials - The type and percentage of various fibrous components was determined by the microscopist in accordance with U.S. Environmental Protection Agency "Method For The Determination Of Asbestos In Bulk Samples" EPA/600/R-93/116, July 1993.
Departures from the test method: **None**
The above test report must not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. Government.
Analysis results on this test report pertain only to those materials tested.
Disclaimers: Asbestos content is quantified using Calibrated Visual Estimate. PLM analysis has been known to be inaccurate for materials with low concentrations of asbestos. Negative PLM results cannot be guaranteed. LES recommends using TEM analysis for materials reported as <1% or none detected. This report may not be reproduced, except in full, without written approval by LES

REPORT OF DAMAGED ACM/PACM

1. Report Filed By:

   Name: _____ Date: _____

   Position: _____ Phone: _____

2. Damage Area Involved (Room Number or Description of Area Involved):

   _____

   _____

   _____

3. Exact Location of Damaged ACM/PACM:

   _____

4. Type of ACM/PACM:

5. Assessment of Damage:

   Size of Area: _____ SF/LF, Describe Below

   a. Evidence of Physical Damage:_____
   b. Evidence of Water Damage:_____
   c. Evidence of Delamination Other Damage:_____
   d. Degree of Accessibility of Material:_____
   e. Degree of Activity Near the Material: _____
   f. Location in an air plenum, air shaft, or air stream: _____
   g. Other observations (including the condition of the encapsulant or enclosure, if any):_____

      _____

   Response Necessary: ____ No; ____ Yes, Describe Recommended Action:_____

   _____

6. Cause of Damage (if known): _____

_____

RETURN TO FACILITY ASBESTOS COORDINATOR

Date Received: _____ Date Inspected: _____

Response Priority: _____ (1= highest, 3 = lowest)

Planned Response Action: _____

Response Assigned to: _____

Signed: _____ Date: _____

Asbestos Program Coordinator

Form M-2

PERIODIC SURVEILLANCE OF ACM/PACM
Raymond G. Murphy VAMC

ALBUQUERQUE, NEW MEXICO

This form is to be completed by the Asbestos Consultant during the triennial periodic surveillance and assessment of ACM. One form is to be completed for each type of material. Additional forms will be completed for each material of the same type that has a different condition assessment.

Building Area Inspected:

_____Building _____Floor _____Room/Area

Type of ACM/PACM:

_____Acoustical Ceilings _____Wallboard _____Roofing _____Flooring

_____Pipe Insulation

Assessment:

		Yes	No	Quantity
1.	Evidence of Physical Damage	_____	_____	_____
2.	Evidence of Water Damage	_____	_____	_____
3.	Evidence of Other Damage	_____	_____	_____
4.	Material Accessibility	_____	_____	_____
5.	Location to Direct Air Stream	_____	_____	_____

Comments:

Asbestos Consultant Verification

I certify that I performed the above surveillance and have updated Appendix A of the O&M program based on this surveillance.

Name:_____

Signature:_____

State Certification #:_____

APPENDIX C

APPLICABLE REGULATORY REQUIREMENTS

APPLICABLE REGULATORY REQUIREMENTS

The following is a list of federal environmental regulations which apply to asbestos materials in commercial buildings and that apply to the NMVAHCS. These regulations are discussed below for informational purposes.

A. OSHA ASBESTOS STANDARD

A building which is known to contain asbestos materials is potentially affected by the Occupational Heath and Safety Administration (OSHA) Asbestos Standard for Construction (29 CFR 1926.1101)

The building owner (or operator) must determine if common maintenance and/or renovation operation could expose workers and/or occupants to airborne fibers during performance of the maintenance and/or renovation activities. If so, he must then conduct representative air monitoring tests to determine if the worker's personal exposure levels exceed the current OSHA Permissible Exposure Limit (PEL) of 0.1 fibers per cubic centimeter of air (f/cc). If they do not, then no further measures are required provided the activities (or methods used to perform them) do not change.

If the PEL is exceeded, the owner/operator may have to develop and implement a number of measures including employee and occupant advisement, training, record keeping and engineering measures to reduce or control exposures. These measures include:

1. Training and education of each employee including the topics of: health hazards of asbestos exposure, methods of recognizing asbestos, the relationship between smoking and asbestos in producing lung cancer, the nature of operations that could result in exposure to asbestos, safe work practices and respirator training. References for help with smoking cessation are included in Appendix E.
2. Establishment of a medical surveillance program including medical exams.
3. Air monitoring to document employee exposures.
4. Maintenance of complete written records of actions taken in accordance with 1926.1101 (k).
   If the exposure levels are above the OSHA PEL of 0.1 f/cc, then additional measures must be developed and implemented to reduce exposures to below 0.1 f/cc as soon as possible. These can involve:

1. Use of respirators and establishment of a formal written respirator plan.
2. Use of HEPA-filtered exhaust ventilation.
3. Installation of temporary or permanent worker decontamination facilities.
4. Isolating work areas and posting access restriction/warning signs.

Current OSHA compliance inspection activities are focusing on companies that manufacture or use raw asbestos products and on asbestos removal contractors. OSHA is also required to formally investigate complaints that may be received from employees or building occupants. For this reason, we recommend establishment of a formal "Asbestos Management Program". The program development would include specific written procedures on how to safely perform common maintenance and renovation activities affecting the asbestos materials, training of maintenance personnel (and advisement of other occupants) and performance of appropriate air monitoring to document your compliance.

B. OSHA'S SHORT-TERM STANDARD TO PROTECT WORKERS EXPOSED TO ASBESTOS

After reviewing the record developed for the 1986 asbestos standard, OSHA determined that asbestos exposures permitted under that standard still posed a "significant risk" to workers. This risk is reduced by adopting the short-term limit on exposure. The standard of 1 f/cc over 30 minutes is "the lowest feasible short-term limit which can be reliably measured for the purposes of the OSHA Compliance Programs." Workers exposed to asbestos at concentrations greater than 1 f/cc for longer than 30 minutes must be protected from exposure under Rule 53 CFR 35610, issued September 14 by OSHA.

The Rule, which became effective October 14, 1988, will require employers to adopt engineering controls to prevent exposure, or provide respiratory and other protection whenever workers' exposure reaches this short-term excursion limit.

The new standard was added October 11, 1994, to existing OSHA regulations that protect workers exposed to an average of more than 0.1 f/cc over an eight-hour work day.

C. USEPA ASBESTOS NESHAP REGULATIONS

USEPA considers asbestos a hazardous air pollutant and regulates its emission to the atmosphere, i.e., to outside of a building under the Clean Air Act of "National Emission Standards for Hazardous Air Pollutants" (NESHAP) (40 CFR Part 61, Subpart M), Basically, the regulation does not apply to potentially hazardous situations inside a building. However, it does dictate that there will be "no visible emission of asbestos fibers to the atmosphere" and enforces this requirement by specifying:

1. Air pollution control devices for firms which mine or manufacture asbestos products, or that remove asbestos insulation materials.
2. Safe methods and controls for removing asbestos materials prior to demolishing or renovating a structure and packaging and disposing the resulting waste; and
3. Pre-notification to USEPA (or a state agency having approved jurisdiction for USEPA) prior to performing the above demolition or renovation activities if they require removal of asbestos.

This regulation therefore mainly dictates how asbestos removal work must be performed by a Contractor, or how asbestos fibers are controlled during a renovation, demolition, or construction activity and proper transit and disposal of ACM/PACM.

Under a closely related federal law, the Toxic Substance Control Act, USEPA has mandated that school buildings be inspected for asbestos (the so-called "School Asbestos Rule"). It has also recently banned essentially all uses of asbestos-containing materials and published a number of guidance documents on how to assess hazardous conditions in buildings and perform various abatement actions.

APPENDIX D

GLOSSARY OF ASBESTOS TERMS

GLOSSARY OF ASBESTOS TERMS

Abatement - procedures physically taken to control fiber release from asbestos-containing materials/presumed asbestos-containing materials (ACM/PACM). This includes removal, encapsulation, enclosure and repair.

ACBM - Asbestos-Containing Building Material(s)

Accessible ACM/PACM - ACM/PACM which is subject to disturbance by building occupants or custodial or maintenance personnel in the course of their normal activities.

ACM/PACM – Asbestos-Containing Material(s)/Presumed Asbestos-Containing Material(s)

Aggressive Sampling - Air sampling which takes place after final clean-up while the air is being physically agitated to produce a "worst case" scenario.

AHERA - The Asbestos Hazard Emergency Response Act of 1986. A federal law requiring the identification and abatement of asbestos hazards in schools. This act also set training standards for individuals performing asbestos-related tasks.

Air Lock - A system of enclosures consisting of two polyethylene curtained doorways at least three feet apart that does not permit air movement between clean and contaminated areas.

Air Monitoring - The process of measuring the airborne fiber concentration of a specific quantity of air over a given amount of time.

Amended Water - Water to which a chemical wetting agent (surfactant) has been added to improve penetration into asbestos-containing materials.

Approved Landfill - A site for the disposal of asbestos-containing and other hazardous wastes that has been given State or Municipal approval.

Area Air Sampling - any form of air sampling or monitoring where the sampling device is placed at some stationary location.

Asbestos - any hydrated mineral silicate separable into commercially usable fibers including, but not limited to, chrysotile (serpentine), amosite (cummingtonite-grunerite), crocidolite (riebeckite), tremolite, anthophyllite and actinolite.

Asbestos Containing Material (ACM/PACM) - any material that contains more than one percent asbestos by weight.

Asbestos Containing Waste Material - asbestos-containing material or asbestos-contaminated objects requiring disposal.

Clearance Air Monitoring - the employment of sampling techniques with a volume of air collected to determine the airborne concentration of residual fibers upon conclusion of an asbestos abatement activity.

Clearance Criteria - an established level of acceptance for declaring an area that has undergone asbestos abatement work environmentally safe for reoccupancy.

Critical Barriers - sealed boundaries of the work area, existing or created, to prevent flow of asbestos contamination to air outside the work area. Examples include: sealed doors, windows, vent openings, HVAC supply and return. Common seals used are polyethylene, plywood, foam board and duct tape.

Curtained Doorway - a device which consists of at least three overlapping sheets of plastic over an existing or temporarily framed doorway. One sheet shall be secured at the top and left side, the second sheet at the top and right side and the third sheet at the top and left side. Sheets of plastic shall have weights attached to the bottom to ensure that the sheets hang straight and maintain a seal over the doorway when not in use.

Decontamination Enclosure System or Facility - a series of connected rooms or chambers, separated from the work area and from each other by air locks, for the decontamination of workers, materials, waste containers and equipment.

Disposal Bag - a 6 mil. thick, leak-tight plastic bag used for transporting asbestos waste from the work site to the disposal site. Disposal bags should contain the required warning, which is permanently embossed or attached to the bag as a label.

Encapsulant (Mastic) or Encapsulating Agent - a liquid material which can be applied to asbestos-containing material (ACM/PACM) and which temporarily controls the possible release of asbestos fibers from the material either by creating a membrane over the surface (bridging encapsulant) or by penetrating into the material and binding its components together (penetrating encapsulant). This may also be used to seal surfaces from which ACM/PACM has been removed.

Encapsulation - the treatment of asbestos containing materials with a penetrating or surface Mastic in order to minimize the potential for asbestos fiber release.

Enclosure - An airtight, impermeable, permanent barrier around ACBM to prevent the release of asbestos fibers into the air.

EL - Excursion Limit The employer shall ensure that no employee is exposed to an airborne concentration of asbestos in excess of 1.0 f/cc as averaged over a sampling period of thirty (30) minutes.

F/CC - Fibers per cubic centimeter of air.

Friable Asbestos Material - any asbestos or any ACM/PACM that can be crumbled, pulverized or reduced to power when dry, by hand pressure.

Ground Fault Interrupter - A device which automatically de-energizes a high voltage system component which has developed a fault in the ground line.

HEPA Filter - a High-Efficiency Particulate Air filter capable of trapping and retaining 99.97 percent of particles (asbestos fibers) greater than 0.3 micrometers in diameter.

HEPA Vacuum Equipment - vacuuming equipment with a HEPA filter.

MSDS - Material Safety Data Sheet

MSHA - the Mine Safety and Health Administration, Approval and Certification Center, P.O. Box 251, Route 1, Philadelphia, WV 26059.

Negative Pressure - An atmosphere created in a work enclosure such that the airborne fibers will tend to be drawn through the filtration system rather than leak out into the surrounding areas. The air pressure inside the work area is less than outside the work area.

NESHAPS - the National Emission Standards for Hazardous Air Pollutants (40 CFR Part 61).

NIOSH - the National Institute for Occupational Safety and Health, 200 Constitution Avenue NW, Washington, DC 20210.

NIOSH/MSHA - The official approving agencies for respiratory protective equipment who test and certify respirators.

Operations & Maintenance (O&M) - A program of specific procedures and practices developed for the interim control of asbestos-containing materials in buildings until it is removed.

OSHA - The US Department of Labor, Occupational Safety and Health Administration which was created by the Occupational Safety and Health Act of 1970; serves as the enforcement agency for safety and health in the workplace environment.

PEL - Permissible Exposure Limit of 0.1 f/cc measured over an 8 hour Time Weighted Average as stated by OSHA.

Personal Air Monitoring - a method used to determine employees' exposure to airborne fibers. The sample is collected outside the respirator in the workers' breathing zone.

Personal Protective Equipment (PPE) - appropriate protective clothing, gloves, eye protection, footwear, head gear and approved respiratory protection.

Plasticize (Poly) - to cover floors and walls with plastic sheeting or by using spray plastics to seal the work area.

Qualitative Fit Test - the individual test subjects responding to a chemical challenge outside the respirator facepiece. The three OSHA - approved methods are: 1) irritant smoke test; 2) odorous vapor test; 3) taste test.

Quantitative Fit Test - exposing the respirator wearer to a test atmosphere containing an easily detectable, nontoxic aerosol vapor or gas as the test agent. Instrumentation, which samples the test atmosphere and the air inside the facepiece of the respirator, is used to measure quantitatively the leakage into the respirator. There are a number of test atmospheres, test agents and exercises to perform during the tests.

Removal - the stripping of asbestos containing materials from surfaces or components of a facility or the removal of structural components.

Respirator Program - A written program established by an employer which provides for the safe use of respirators on the job site.

Repair - The action of returning damaged ACBM to an undamaged condition or to an intact state so as to prevent fiber release.

Response Action - Method, including removal, encapsulation, enclosure, repair and operations and maintenance, that protects human health and the environment from friable ACM/PACM.

Routine Maintenance Area - An area, such as a mechanical room, that is not normally frequented by occupants and in which maintenance employees or contract workers regularly conduct maintenance activities.

Surfactant - the chemical wetting agent added to water to improve the capability of penetration, thus reducing the quantity of water needed during abatement.

Time Weighted Average (TWA) - the average concentration of a contaminant measured in the air during a specific time period.

USEPA - the United States Environmental Protection Agency, 401 M Street, SW, Washington, DC 20460.

Visible Emissions - any emissions containing particulate asbestos material that is visually detectable without the aid of instruments.

Wet Wiping - the method of eliminating asbestos containing material from surfaces and objects using cloths, mops or other cleaning utensils dampened with water. Such items are disposed of as asbestos-contaminated waste and are handled accordingly.

Work Area - designated rooms, spaces, or areas of the building or structure where asbestos abatement takes place.

Work Site - the premises where asbestos abatement activity is taking place.

APPENDIX E

SMOKING CESSATION INFORMATION

SMOKING CESSATION INFORMATION

29 CFR 1926.1101

The following organizations provide smoking cessation information.

1. **THE NATIONAL CANCER INSTITUTE**

   Public Inquires Office

   National Cancer Institute

   6116 Executive Boulevard

   Building 31, Room 3036A

   Bethesda, MD 20892-8322
   Cancer Information Service (CIS) 1-800-4-CANCER

2. **THE AMERICAN CANCER SOCIETY**

   American Cancer Society
   Albuquerque New Mexico
   5800 Lomas Blvd NE
   (505) 260-2105

The American Cancer Society (ACS) is a voluntary organization composed of 13 divisions and 3,400 local units. ACS helps people learn about the health hazards of smoking and become successful ex-smokers.

3. **THE AMERICAN HEART ASSOCIATION**

   American Heart Association
   2201 San Pedro Dr NE, Albuquerque, NM 87110
   (505) 353-5800

The American Heart Association (AHA) is a voluntary organization with 130,000 members (physicians, scientists and lay persons) in 56 state and regional groups. AHA produces a variety of publications and audiovisual materials about the effects of smoking on the heart. AHA also has developed a guidebook for incorporating a weight control component into smoking cessation programs.

4. **THE AMERICAN LUNG ASSOCIATION**

American Lung Association
Albuquerque New Mexico
5911 Jefferson St NE, Albuquerque, NM 87109
(505) 265-0732

A voluntary organization of 7,500 members (physicians, nurses and lay persons), the American Lung Association (ALA) conducts numerous public information programs about the health effects of smoking. ALA has 59 state and 85 local units. The organization actively supports legislation and information campaigns for non-smokers' rights and provides help for smokers who want to quit, for example, through "Freedom From Smoking," a self-help smoking cessation program.

5. **CENTERS FOR DISEASE CONTROL AND PREVENTION**

Office on Smoking and Health
Centers for Disease Control and Prevention
1 (800) 232-4636
Consult your local telephone directory for listings of local chapters.

APPENDIX F

ALTEC TESTING & ENGINEERING ASBESTOS O&M PLAN

Altec Testing & Engineering, Inc.

ASBESTOS-CONTAINING MATERIALS
OPERATIONS & MAINTENANCE (O&M) PLAN

April 2010

for:

Raymond G. Murphy VA Medical Center
1501 San Pedro SE
Albuquerque, NM 87108

Covering:

Building Nos.
1, 1-Annex, 2, 3, 4, 5, 6, 8, 9, 10, 11, 12, 13, 14, 15, 18, 32, 33, T35, T35A, T38A, T38B, 39, T46, 57, 58, T59, 60, 61, X61, 62, X62, 63, & 65

Prepared by:

Appendix B – Asbestos Inventory Table

1.0 FACILITY INFORMATION & ASBESTOS INVENTORY

1.1 FACILITY INFORMATION

Facility managers at the Raymond G. Murphy VA Medical Center in Albuquerque, New Mexico understand that asbestos is a hazardous substance and asbestos-containing materials (ACMs) in deteriorated or damaged condition can cause serious health effects. ACM surveys have been previously performed and ACMs have been identified within the buildings. This O&M Plan should be used in to supplement any existing O&M Plan(s).

In general, the ACMs identified by Altec Testing & Engineering, Inc. (Altec) include thermal system insulation (TSI), HVAC products, joint compound, ceiling/wall tile adhesive, vinyl floor tile/covering and flooring/carpet adhesives.

Asbestos-cement products (i.e., Transite™) and TSI are expected to be located in walls, ceiling cavities and other inaccessible or hidden areas. Some roofing materials especially roof penetration mastics are expected to contain asbestos. The roof areas were not included in the scope of work for this survey.

Altec has produced this written O&M Plan to provide continued inspection and evaluation of the condition of asbestos materials as well as establish strict procedures for all future engineering, maintenance, renovation or service contract work to be performed in the building. This program was reviewed and approved by a Certified Industrial Hygienist (CIH). The policy of the Raymond G. Murphy VA Medical Center is that ACM that is in a state of disrepair or handled improperly can present a serious threat to health.

Previous remodeling/modernization efforts throughout the facility may have included removal of some ACMs from the renovated areas. Based on information provided by Raymond G. Murphy VA Medical Center staff the following areas have been either already surveyed and/or have been renovated and were excluded from this survey:

Building 10 – First Floor - North portion
Building 10 – Second Floor - North portion

In general, these areas were excluded from the survey Altec performed in October 2009.

The following buildings at the facility were sampled for ACM. They will be referenced as “covered buildings” throughout this O&M Plan. ACM has been identified in the structures identified below. The scope of work areas included accessible interior and exterior spaces. Roofs and inaccessible interior areas (such as inaccessible crawl spaces, inaccessible wall-ceiling cavities and other inaccessible voids) in each building were not

inspected due to access restrictions. Suspect ACMs within these areas should be assumed to contain asbestos until sampling proves otherwise.

Building No.	Building Function	Year Built	Square Footage	Number of Floors	ACM Present
1	**Psychiatry**	**1932**	**71,222**	**5**	**YES**
1 - Annex	Conference/Office	1932	71,222	1	No

65	Booster Pump House	1958	130	1	No

1.2 ASBESTOS-CONTAINING MATERIAL INVENTORY

Altec performed a survey of suspect ACMs in the accessible areas within the referenced buildings which include sample collection, laboratory analysis and hazard assessment. The asbestos survey report contains the details and locations for the ACMs. A list of the ACMs identified in the surveyed areas is included in Appendix B.

1.3 ASBESTOS-CONTAINING MATERIAL DEFINITION

The term asbestos-containing material (ACM), as used in this O&M Plan, refers to all building materials that contain or could possibly contain asbestos fibers in its composition in quantities greater than 1% (as regulated by the USEPA). Determining if a material that is suspected of containing asbestos actually contains asbestos is done by collecting bulk samples from the material followed by laboratory analysis of the sample. If the material contains asbestos fibers in quantities greater than 1%, it is deemed ACM. Sometimes suspect materials are assumed to be ACM without sampling. These materials are referred to as presumed asbestos-containing materials (PACM). These confirmed or suspect asbestos-containing materials were identified and sampled by an EPA Accredited Asbestos Building Inspector/Management Planner. The collected samples are tested by the laboratories accredited through the National Institute of Standards and Technology's National Voluntary Laboratory Accreditation Program (NVLAP) in accordance with approved methods for polarized light microscopy (PLM), dispersion-staining techniques, and quantified as to type and percentage of each material present. The analysis identifies both asbestos and non-asbestiform materials. Suspect vinyl asbestos floor tiles may also be analyzed by the point count method or transmission electron microscopy (TEM) for further confirmation of positive or negative results.

Asbestos materials are classified into two major types: friable and non-friable. Friable asbestos exists in a form which may be reduced to powder when hand pressure is applied, thereby releasing asbestos fibers into the air (i.e., spray-applied acoustic or thermal system insulation which is asbestos-containing would be a friable form of asbestos). Non-friable asbestos materials have asbestos contained in a bonded matrix such that the matrix is not easily deteriorated nor asbestos easily released into the air except by a significant mechanical action (i.e., cutting, sanding, abrading, or drilling non-friable material). Friable asbestos-containing materials pose a higher risk for airborne exposure than non-friable asbestos-containing materials.

Asbestos NESHAP Requirement to Perform Point Counting on Friable ACM
The USEPA, National Emissions Standard for Asbestos (NESHAP) Standard, 40 CFR 61, Subpart M, regulates the disposal, manufacturing, fabricating, demolition, renovation, and spraying of ACM, which have an asbestos concentration of greater than one percent (1.0%), by area. In addition, NESHAPS requires friable ACM [also known as regulated

asbestos containing material (RACM)] be point counted, by polarized light microscopy (PLM), to quantify asbestos in materials estimated to contain less than ten percent (10%) asbestos.

EPA's memorandum dated May 8, 1991 clarified the point counting requirement. This memorandum applies to all RACM. The memorandum recommends the following procedures be followed for the analysis of RACM:

If after analyzing a sample by standard PLM, no asbestos is detected, point counting does not have to be performed. A minimum of three prepared slides should be analyzed and found to be negative for asbestos before making this determination. If the analyst visually estimates the amount of asbestos in a sample of potential RACM to be less than ten percent, the building owner, or operator, may choose to either, (1) assume that the material contains greater than one percent and treat the material as RACM, or (2) have the amount verified/ quantified by point counting. The final result that is obtained from point counting is the result that is to be reported.

If the amount of asbestos is observed in the sample, using PLM, but no fibers were counted during the point counting procedure, the results should be reported as "trace" asbestos. (This occurs when asbestos is seen on the slide, but no fibers fall under the graticule while point counting.)

EPA published a "Notice of Advisory" in the Federal Register on August 1, 1994, to "announce the availability of an improved bulk sample analysis test method". This procedure, "Method for the Determination of Asbestos in Bulk Building Materials" (EPA/600/R-93/116) was developed to enhance analysis of floor tiles and other non-friable material, improve precision, especially at lower concentrations, and "clearer instruction on the analysis of bulk materials, particularly where multiple layers are present". This method includes a provision for using calibrated visual estimation, using a set of standards containing known concentrations of asbestos, to calibrate the analyst, or for using point counting to quantify lower percentages of asbestos in samples. The calibrated visual estimation method trains the analyst to visually estimate percentages more accurately. EPA recommends using this method in place of the 1982 EPA "Interim Method for the Determination of Asbestos in Bulk Insulation Samples". This newer method is appropriate, except when reporting asbestos concentrations (<10%) of potential RACM, where point counting must be utilized, as is explained in EPA's May 8, 1991, point counting memorandum.

An experienced analyst can detect asbestos in samples containing less than one percent if the asbestos fibers are of sufficient size to be resolved by the polarized light microscope. However, quantifying low concentrations is difficult. Visual estimates of asbestos concentrations tend to be higher than concentrations determined by point

counting. Proper homogenization of samples, and proper slide preparation are necessary to achieve representative results from point counting. Point counting is time consuming, and, therefore, more expensive, but the results are more accurate and precise than visual estimation.

Bulk Friable material, containing less than one percent asbestos, by area, and as determined by point counting, is not regulated under the Asbestos NESHAP rule. The Department of U.S. Department of Labor, Occupational Safety and Health Administration (OSHA) regulates employee exposure to material containing greater than 1% as determined by procedures in 40 CFR Part 763, Appendix E, Subpart E. Clarification of OSHA's requirements must be obtained from the local office of OSHA.

The benefit of point counting is that it produces a systematic means of quantitative analysis. Point counting is dependent on the analyst's ability to correctly identify asbestos in a sample. Thorough examination of the entire sample (using a stereo microscope), obtaining a homogenous sample, and careful slide preparation will improve the analyst's ability to detect and quantify asbestos, either by visual estimation, or by point counting. The use of calibrated asbestos standards should improve an analyst's ability to visually estimate low percentages of asbestos, and, therefore, assist the analyst in concluding the need to perform point counting.

2.0 O&M PLAN DESCRIPTION

This document consists of a set of procedures that should be applied to building cleaning, maintenance, and general operations in order to maintain a building environment free from any asbestos contamination.

This document serves as the policy for all custodians, maintenance personnel and service/ renovation contractors who may encounter asbestos containing materials (ACM) while working in the covered buildings at the Raymond G. Murphy VA Medical Center. This document is called an Asbestos Operations and Maintenance (O&M) Plan. The Asbestos O&M Plan is designed to protect the health and safety of all persons working around asbestos and to comply with all regulations set forth by the Environmental Protection Agency (EPA) and the U.S. Department of Labor, Occupational Safety and Health Administration (Fed/OSHA). National Institute for Occupational Safety and Health (NIOSH) recommendations have also been incorporated into this document.

The Asbestos O&M Program refers to the collective effort made in managing asbestos in the facility. It includes the O&M Plan, the O&M Participants, the equipment and all of the associated documentation.

This O&M Plan document is divided into several sections with O&M forms included in Appendix A. The entire document represents the full O&M Plan.

Ensuring the safety and health of all employees in accordance with regulations and guidelines published by OSHA and EPA is the primary goal of this O&M. Every effort has been made to minimize the inconvenience of the procedures on normal work routines.

It should be noted that this O&M Plan document is not an asbestos removal specification. This document describes procedures to be followed for implementation of operations and maintenance activities that will or may impact asbestos-containing materials in the covered buildings at the facility. Although this plan describes general work practices to follow for performing work associated with all types of ACM, regardless of friability and quantity, a project-specific specification should be created and implemented for use on large scale asbestos abatement/removal jobs.

2.1 PLAN OBJECTIVES

The purpose of this effort is to establish an O&M Program for controlling exposure to asbestos in the covered buildings at the facility. The O&M Plan focuses on the activities of custodians, maintenance workers, and service contractors. The principal elements of this O&M Program involve requirements and responsibilities for identification of

asbestos through surveys, training and certification of workers, employee/occupant notifications, proper work procedures for activities that have the potential to disturb ACM, and proper disposal of asbestos wastes.

The O&M Program has three main goals or objectives:

OBJECTIVE #1 - Identification of areas where damage to ACM has occurred on an ongoing basis,

OBJECTIVE #2 - Clean up and repair of previously damaged ACM in a prioritized manner to remove asbestos fibers that may have been previously released, and

OBJECTIVE #3 - Minimizing future fiber release through the control of activities that might disturb ACM.

Program Objective #1 will be accomplished by performing regular inspections (by designated trained facility staff) of identified ACM. Program Objective #2 will be accomplished by completing prioritized response actions and through implementation of this O&M plan. Program Objective #3 (minimizing ACM disturbance) will be accomplished by adopting specially designed work practices for custodial and maintenance workers.

Success in achieving and maintaining a building free of asbestos contamination depends on the characteristics and location of the ACM and the enforcement of strict work procedures. O&M procedures will not be sufficient for ACM that is severely damaged or is located in certain building locations where environmental or physical factors may affect the material. These materials will need to be removed/repaired by trained asbestos abatement contractors.

2.2 LAYING THE GROUNDWORK FOR AN EFFECTIVE O&M PROGRAM

An effective Asbestos O&M Plan contains specific activities and procedures that are established to reduce or minimize exposure of building occupants and workers to asbestos. An Asbestos O&M Plan should be implemented after an asbestos survey has identified all asbestos-containing materials and evaluated their associated hazard potentials. An O&M Plan is not an alternative to asbestos abatement, but it is an essential part of the overall asbestos management program. The Asbestos O&M Plan can be designed either to reduce asbestos exposure while specifications for removal are being prepared or to ensure that asbestos-containing materials that are not removed are maintained in good condition.

The Asbestos O&M Plan for the covered buildings at the Raymond G. Murphy VA Medical Center has been developed in accordance with the building type and usage, the nature of the asbestos-containing material, and the ultimate goal of the asbestos management program.

A successful Asbestos O&M Program is well-organized and well managed. The responsibilities and activities of every participant (both in-house and outside services) must be specifically defined.

A successful Asbestos O&M Program requires a serious commitment from all levels of management. This commitment starts with an administrative organization and a plan. The key person is the Asbestos Program Manager. This person will be appointed by management. He/she is typically a health and safety officer, industrial hygienist, or similar in-house professional. The Asbestos Program Manager is responsible for directing maintenance personnel and outside contractors.

Demolition activities may ultimately expose ACMs that were previously unidentified or covered and were inaccessible during the previous survey(s). Outside contractors performing demolition activities should be informed of the potential presence of ACM and trained to identify suspect ACM in the covered buildings at the Raymond G. Murphy VA Medical Center. Destructive testing should be performed prior to allowing the demolition contractor to begin work.

One of the most important areas of concern, and major responsibilities of the Asbestos Program Manager and O&M Supervisor, is to supervise and govern contractors and renovation in the building.

All work performed by employees in the covered buildings involving the use, alteration, maintenance, renovation or demolition of asbestos or any standard activity which may contact asbestos materials or may produce airborne asbestos fibers must comply with asbestos control procedures.

Maintenance, facilities, engineering, and custodial personnel shall be informed of the presence and locations of asbestos-containing materials in the covered buildings at the Raymond G. Murphy VA Medical Center, the possible public health impact of the materials found and the appropriate preventive health measures that they should take (for instance, conducting routine visual inspections and conducting maintenance in a knowledgeable and controlled manner).

2.3 APPLICABLE REGULATIONS

Three primary asbestos regulations include:
AHERA/ASHARA (applies to Schools and public buildings)
NESHAPS (applies to air emissions and exposures to the general public)
OSHA (applies to employees exposure)

There are numerous other regulations, both on the federal, state, and local levels.

Each type of regulation serves a specific purpose:
29CFR 1910.1001 Federal OSHA, Covers Asbestos in the workplace
29CFR 1926.1101 Federal OSHA, Asbestos construction standard
40CFR 763 – also known as AHERA - Asbestos in Schools regulation
40CFR Part 61, M, National Emission Standard for Hazardous Air Pollutants (NESHAPS)
Inspection prior to Renovation or Demolition

2.4 AGENCY NOTIFICATION REQUIREMENTS

Work involving the disturbance or potential disturbance of ACM in the covered buildings at the Raymond G. Murphy VA Medical Center will be performed by O&M Maintenance Workers and Supervisors or by contracted private asbestos abatement contractors. Contractors retained by the Raymond G. Murphy VA Medical Center to complete asbestos-related projects must be appropriately licensed, carry and be able to demonstrate that they carry appropriate types and amounts of insurance and provide work crews with current certification training, respirator fit test and medical approval documents.

Working with asbestos also requires notification to certain regulatory agencies in certain circumastances.

2.4.1 NESHAPS Notifications

RULE 3050 ASBESTOS REMOVAL FEES
National Emission Standards for Hazardous Air Pollutants (NESHAPs), adopted by reference as District Rule 4002 sets forth that fees are applicable to all demolitions whether or not asbestos is present; and renovations in which 260 linear feet, 160 square feet, or 35 cubic feet or more of regulated asbestos containing materials are disturbed. Every person filing notification of an asbestos removal project, subject to the provisions of Rule 4002 (NESHAPS), shall pay upon filing, the nonrefundable fee.

RULE 4002 NATIONAL EMISSION STANDARDS FOR HAZARDOUS AIR POLLUTANTS

This rule incorporates the National Emission Standards for Hazardous Air Pollutants from Part 61, Chapter I, Subchapter C, Title 40, Code of Federal Regulations (CFR) and the National Emission Standards for Hazardous Air Pollutants for Source Categories from Part 63, Chapter I, Subchapter C, Title 40, Code of Federal Regulations (CFR). All sources of hazardous air pollution shall comply with the standards, criteria, and requirements set forth therein.

Annual notification is required if nonscheduled renovation operations conducted during the year are expected to exceed 100 square feet. This notification is due by December 17 of the year preceding the year in which notification is given.

Renovation notification is required if more than 260 linear feet, 160 square feet, or 35 cubic feet or more of regulated asbestos-containing materials are disturbed. The notification must be postmarked at least 10 working days prior to the start of work activities.

Demolition notification is always required, even if there is less than 100 square feet of asbestos that will be disturbed or no asbestos at all. The notification must be postmarked at least 10 working days prior to the start of demolition activities.

Notification must be typewritten on forms provided by SJVAPCD, available at their website. A filing fee must accompany the notification. Consult the SJVAPCD website for current fee schedules, which are amended frequently.

Notifications must be revised if the quantity of asbestos changes by 20% or more, the start date changes, or the complete date changes.

2.4.2 Federal EPA Notification

Federal EPA does not require notification if the SJVAPCD has been notified.

2.5 DEFINITIONS OF ASBESTOS RELATED TERMS

Acceptable Air Level is the recommended concentration in regards to airborne fibers following asbestos abatement or O&M work. It is usually reported in fibers/cc. A background level of < 0.01 fibers/cc (which is the recommended EPA and NIOSH Clearance Level) is commonly adopted as the Acceptable Air Level.

Adequately Wetted means sufficiently mixed, soaked or coated with water to prevent or contain the release of asbestos fibers into the air.

Amended Water means a water solution containing an effective low sudsing wetting agent.

Asbestos includes chrysotile, amosite, crocidolite, tremolite, anthophylite, and actinolite, in a fibrous form, and as determined by polarizing light microscopy (PLM).

Asbestos Abatement Contractor is a company that provide services for ACM abatement and for building decontamination following a fiber release episode.

Asbestos Consultant is a State of California Certified Asbestos Consultant (CAC), Certified Industrial Hygienist (CIH), Architect, and others, who may assist in various aspects of the program.

Asbestos-Containing Material (ACM) means any material which contains asbestos in one-tenth of one percent (0.1%) or more by weight by definition according to Cal/OSHA regulations, and/or greater than 1% in accordance with EPA or San Joaquin Valley APCD. ACBM and ACCM are ACM.

Asbestos-Containing Building Material (ACBM) means asbestos-containing building material.

Asbestos-Containing Construction Material (ACCM) means asbestos-containing construction material.

Asbestos Fiber is any fiber of chrysotile, amosite, crocidolite, tremolite, anthophylite, and actinolite longer than 5 micrometers and with a length to width aspect ratio of greater than 3 to 1 (meaning it is at least 3 times longer than it's width).

Asbestos Free is the designation of any material that has been tested and documented to contain less than one tenth of one percent (0.1%) asbestos by weight (Cal/OSHA) or 1% or less asbestos by weight (Fed). California's definition of an asbestos-containing material is 0.1% or greater. The Federal definition of asbestos-containing material is greater than 1% asbestos by weight.

Asbestos Danger Label means a label which contains the following wording, printed in letters of sufficient size and contrast to be readily visible and legible: DANGER CONTAINS ASBESTOS FIBERS AVOID CREATING DUST CANCER AND LUNG DISEASE HAZARD.

Asbestos Related Demolition Project means activities which include the removal of all or a portion of a structure which contains friable ACM or other ACM which may become friable when cut, crushed, ground, abraded, pulverized, or burned.

Asbestos Related Work means any activity involving asbestos-containing materials which has the potential to release asbestos fibers into the air. This includes the demolition, renovation or encapsulation of friable asbestos materials or any operation involving non-friable materials which could cause the release of asbestos fibers into the air. This also includes areas in which glove bag work is being performed and areas that are undergoing vinyl asbestos floor tile removal.

Asbestos Removal Project means activities which include the physical removal of friable ACM or non-friable ACM that can become friable from the surface of a structure or from equipment which is intended to remain in place after the removal.

Asbestos Waste Disposal Site means a solid waste disposal facility that is operated under a permit issued by the state and is authorized to receive asbestos containing solid wastes.

Asbestos Work Area means the area fully enclosed with polyethylene and made air tight immediately surrounding the asbestos work. Use of negative air filtration is essential in most of these operations. All activity of the asbestos removal occurs within the asbestos work area.

Buffer Zone means the area surrounding the asbestos work area which is demarked with tape barriers and adequately posted with asbestos work warning signs. The buffer zone provides an extra margin of safety for those passing near the asbestos work area.

Ceiling Limit or Concentration is the maximum allowable concentration to which a worker may be exposed for any 30 minute period referred to as a Short Term Exposure Level (STEL) or an Excursion Level (EL) expressed as 1.0 fiber/cc in 30 minutes.

Certified Industrial Hygienist (CIH) is an individual certified by the American Board of Industrial Hygiene (ABIH), and is recognized nationally and internationally as having comprehensive practice in all areas of industrial hygiene, including asbestos-related topics.

Containment Area means a negative pressure enclosure or asbestos project work area and decontamination facility configured so as to isolate asbestos project activities from areas which are to remain uncontaminated.

Decontamination Facility means that portion of the containment area containing an equipment room, shower facility and a clean change room.

Demolition means the wrecking, razing, or removal of any structure or load-supporting structural item of any structure, including any related material handling operations, and

includes the intentional burning of any structure. Demolition should not be confused with renovation.

Documentation means the complete record keeping associated with a comprehensive Asbestos O&M Plan. Each of the elements and all of the activities should be clearly chronicled and the associated records maintained for 30 years or longer. The location of asbestos, the results of any air monitoring, medical surveillance programs, respiratory protection, training, cleaning, repairing and removal are all important things to document.

Emergency Procedures include a description of who will be notified and what safety precautions will be instituted in the event of an accidental fiber release. A special team should clean up the debris and air samples should be taken during the activity.

Emergency Renovation means the unexpected and unplanned repair or replacement of major components, equipment or building materials which is required to avoid interruption in occupancy, utility service or to avoid significant damage to system reliability or system facilities.

Encapsulation means activities, which include the coating of ACM surface material with a penetrating or bridging type of sealing material for the intended purpose of preventing the continued release of asbestos fibers from the material into the air. This definition shall not include the repainting of a previously painted nonfriable ACM surface which is not damaged primarily for improving the appearance of such surface.

Enclosure means the construction of an airtight, impermeable permanent barrier around ACM to control the release of asbestos fibers into the air. It is also called a negative pressure enclosure.

Environmental Attorney is someone who provides advice on legal requirements and liability aspects of the asbestos or other environmental issues.

Environmental Protection Agency (EPA) is a Federal agency which regulates certain areas of asbestos laws. EPA Federal Region IV is located in San Francisco, California and regulates the State of California.

EPA Regional Asbestos Program Manager and State/Local Government Advisors provide general guidance and answer specific questions about asbestos.

Fibers/cc means the number of fibers per cubic centimeter of air. It is the unit of measure used to express the airborne concentration of asbestos fibers.

Friable asbestos-containing material (ACM) means any material containing more than one percent asbestos which has been applied on ceilings, walls, structural members, piping, duct work, or any other part of a building, which when dry, may be crumbled, pulverized, or reduced to powder by hand pressure. The term includes non-friable asbestos-containing material after such previously non-friable material becomes damaged to the extent that when dry it may be crumbled, pulverized, or reduced to powder by hand pressure.

Grade D Breathing Air means an air supply that contains 19.5 – 23.5% oxygen on a volumetric basis, not more than 10 volumes of carbon monoxide or 1,000 volumes of carbon dioxide per million volumes of air, not more than 5 milligrams of condensed hydrocarbons per cubic meter of air and no objectionable odors.

Health Effects refers to studies of humans exposed to asbestos in the workplace that have revealed findings confirming adverse health effects; increased cancer rates in certain worker, lung abnormalities in asbestos workers and their family members, and asbestosis, mesothelioma, and digestive cancers.

HEPA means High Efficiency Particulate Air and refers to a filter's capability to remove asbestos and other fibers as small as 0.3 micron size (mono dispersed particles) at an efficiency of 99.97%.

HEPA Vacuum means a vacuum which utilizes a High Efficiency Particulate Air filter capable of removing asbestos fibers in air that are 0.3 microns in size or greater.

HEPA Exhaust System means a HEPA exhaust/vacuum system set up to collect and filter air that may contain asbestos fibers from operations including asbestos removal and/or contamination clean-up.

Inspection means an activity undertaken in a school building, or a public and commercial building, to determine the presence or location, or to assess the condition of, friable or non-friable asbestos-containing material (ACM) or suspected ACM, whether by visual or physical examination, or by collecting samples of such material. This term includes reinspections of friable and non-friable known or assumed ACM which has been previously identified. The term does not include the following: inspections performed by employees or agents of Federal, State, or local government solely for the purpose of determining compliance with applicable statutes or regulations; or visual inspections of the type solely for the purpose of determining completion of response actions.

Inspector means an individual who is certified by EPA to identify and assess the condition of ACM. Inspectors shall perform their duties in accordance with the techniques, knowledge, training and responsibilities outlined in the regulations.

L means liters, in relation to volume of air.

Management Planner means an individual who is certified by EPA to assess the hazard of materials containing asbestos, to determine the appropriate response actions and to write management plans.

Major fiber release episode means any uncontrolled or unintentional disturbance of ACM, resulting in a visible emission, which involves the falling or dislodging of more than 3 square or linear feet of friable ACM.

Minor fiber release episode means any uncontrolled or unintentional disturbance of ACM, resulting in a visible emission, which involves the falling or dislodging of 3 or less square or linear feet of friable ACM.

MSHA is the Mine Safety and Health Administration

Negative exposure assessment is a set of personal air sampling results (collected on O&M or asbestos workers) that documents low airborne fiber exposures were obtained during similar work. It is used to establish the necessary worker protection until air sample results can be obtained for a particular project.

NESHAPS RACM is friable ACM and NESHAPS Category I or II ACM that have or may become friable (containing greater than 1% by PLM)

NESHAPS Category I Non-Friable is non-friable ACM such as floor tile/mastic, gaskets, roofing (containing greater than 1% by PLM)

NESHAPS Category II Non-Friable is non-friable ACM such as transite (containing greater than 1% by PLM)

NIOSH is the National Institute for Occupational Safety and Health

Non-friable Asbestos means asbestos material in a bonded matrix such that asbestos fibers are not released unless a significant mechanical action, such as sawing, cutting, drilling, sanding, etc. is applied. This includes Transite sheeting and piping, asbestos board, and undamaged Vinyl Asbestos Tile or Vinyl Floor Coverings including linoleums with a fiber backing.

Notification is the requirement of building owners to either let agencies or building occupants know that asbestos will be removed from a building, that a building will be demolished or, that asbestos is present in a building. Because building occupants can disturb non-abated asbestos materials, all occupants should be notified of the location of ACM and the need to avoid disturbing these materials. The notification statement should be as complete as possible in the disclosure, but should not create hysteria among the building occupants. A Certified Asbestos Consultant is often consulted when developing notification statements. Notification may be made by distributing written notices, posting signs, or by holding one or more information meetings/sessions.

OSHA means the Federal Occupational Safety and Health Administration

OSHA Class I job involves work with TSI, surfacing & presumed ACM

OSHA Class II job involves work with all other ACM

OSHA Class III job involves maintenance/repair work where ACM is disturbed to repair another component (removed ACM will fit in 60”X60” glove bag)

OSHA Class IV job involves maintenance & repair work to clean up debris from Class I, II or III jobs

OSHA Asbestos EL is 1 f/cc for a maximum of 30 minutes – the excursion limit

Phase Contrast Microscopy (PCM) is the visual analysis of air sample media performed at 450x magnification. Present NIOSH procedures and OSHA 7400 “A” Method use this type of microscopy which involves counting all types of fibers greater than 5.0 microns in length with a length to width ratio of at least 3 to 1, over a known surface area of the filter. Results are reported in fibers/cc.

PE is a Professional Engineer

Periodic Monitoring and Reassessment is a reference that asbestos O&M Plans require periodic air monitoring and/or other contamination checks plus routine assessment. This element of the Asbestos O&M Plan is designed to ensure and document that "non-hazardous" asbestos-containing materials stay "non-hazardous".

Periodic Surveillance is evaluation for the purpose of recording or reporting a change in the condition of known or assumed ACBM

Permissible Exposure Limit (PEL) is the OSHA limit (0.1 f/cc over an 8 hour time weighted average) to which employee exposure is to never exceed.

Polarized Light Microscopy (PLM) is the visual analysis of bulk sample material performed commonly 100x magnification. It is the current EPA and NVLAP recommended method for the determination of asbestos form mineral fibers in building materials (bulk samples). The analysis involves the use of dispersion staining liquids to match the known refractive index of asbestos form minerals.

Potentially Friable means any non-friable material which in its present and normal state would be considered hard, firm, encased or well bound, and not readily crumbled or pulverized; which will crumble or pulverize when subjected to strong abuse, hard contact or the drilling, cutting, sanding, breaking, etc. associated with construction or demolition activities.

Posting of Signs means that special warning signs containing information about asbestos shall be purchased and placed in locations where asbestos exists. The identification and marking of all ACM is required for all maintenance areas and will be explained in the labeling/marking section of this O&M document.

Project Designer means an individual who is certified by DOSH to formulate plans and write specifications for conducting asbestos projects.

Project Monitor means an individual who is certified by DOSH to observe abatement activities performed by contractors, to represent the building owner to ensure work is completed according to specifications and in compliance with statutes and regulations, and to perform air monitoring to determine final clearance.

Protective clothing means protective outer clothing, which is worn by an individual who is engaged in an asbestos project regardless of the concentration of asbestos fibers in the air within the asbestos project. Protective clothing consists of coveralls or similar whole body covering, head covers and foot covers.

Public and commercial building means the interior space of any building which is not a school building, except that the term does not include any residential apartment building of fewer than 10 units or detached single-family homes. The term includes, but is not limited to: industrial and office buildings, residential apartment buildings and condominiums of 10 or more dwelling units, government-owned buildings, colleges, museums, airports, hospitals, churches, preschools, stores, warehouses and factories. Interior space includes exterior hallways connecting buildings, porticos, and mechanical systems used to condition interior space.

Re-Inspection Procedures means the recommended procedures for conducting periodic re-inspection of the asbestos containing materials as required in the regulations.

Renovation means the removal or stripping of friable or non-friable asbestos materials used on any pipe, duct, boiler, tank, reactor, turbine, furnace, etc. in any building, facility, or installation. It is usually associated with a tenant improvement or change in existing facilities processes or space requirements.

Respirator means an appropriate breathing device that provides protection against fibers in air.

Response action means a method, including removal, encapsulation, enclosure, repair, and operation and maintenance, that protects human health and the environment from friable ACBM.

Scanning Electron Microscopy (SEM) is analysis of bulk or air sample material performed at magnification from 450x through 15,000x. This method utilizes energy dispersive microanalysis (X-ray) to identify asbestos only fibers. Method involves the counting of fibers, discriminating between less than and greater than 5.0 microns in length, in a known surface area of filter. None of the published regulations currently specify the use of SEM for asbestos analysis.

Small-scale, short-duration activities (SSSD) are tasks performed for to remove a limited amount of ACM over a limited time.

Special Decontamination Chamber (Decontamination Unit) is a special enclosure containing three chambers/rooms that is constructed of plastic sheeting covering a suitable wood/plastic frame which is installed immediately adjacent and connected to the asbestos work enclosure. The decontamination unit provides the only means of entering and exiting the asbestos work enclosure. The special chambers are considered to be dust tight and to contain any contamination carried out of the asbestos work enclosure by a worker.

Supervisor means an individual who is certified by DOSH to supervise and direct an asbestos project in accordance with the Asbestos Control Act and the rules and regulations adopted and promulgated pursuant to this act.

Training can mean sereval different things. An employee awareness training session is needed for custodial, maintenance and service employees to outline proper cleaning and maintenance procedures that should be employed around asbestos-containing materials. Training of all employees should be updated annually, or more frequently as needed. New employees should be trained before they begin work that might impact ACM. Employees receiving “awareness training” are not expected to be employees that

would respond to potential fiber release episodes. Additional training is required for asbestos O&M workers and supervisors.

Transmission Electron Microscopy (TEM) is analysis of bulk or air sample material performed at magnification from 1000x through 25,000x. It is the state-of-the-art analytical method for air samples. This method utilizes high magnification to identify, measure, and count asbestos fibers. The mass of each fiber may also be estimated if choice for analyzing asbestos based on its sensitivity to the smallest fibers and on its specificity for asbestos. Extremely thin asbestos fibers (typically 0.0025 micron in diameter) can be detected.

Time Weighted Average (TWA) the measured concentration of a particular substance weighted and averaged typically over a normal eight hour work day.

Type-C Respirator System means an airline respirator designed for atmospheres not immediately dangerous to life or health. It consists of a source of respirable breathing air, an air hose with a detachable coupling, flow control fittings and a facepiece, helmet or hood.

Warning Sign means a sign not less than eleven (11) inches wide which contains the equivalent of the following legend, printed in letters of sufficient size and contrast to be readily visible and legible: DANGER ASBESTOS CANCER AND LUNG DISEASE HAZARD AUTHORIZED PERSONNEL ONLY RESPIRATORS AND PROTECTIVE CLOTHING ARE REQUIRED IN THIS AREA.

Wet Cleaning means the process of using amended water or a removal encapsulant and a wet brush, mop, cloth, sponge or similar wet cleaning device to remove completely any visible ACM residue from surfaces. This definition does not include the use of a non-HEPA filter-equipped wet vacuum cleaner to pick up wet ACM debris or contaminated wastewater.

Wetting Agent means a surfactant or chemical that is added to water to decrease its surface tension and allow it to spread more easily over or penetrate into a surface that is covered with ACM.

Whole Body Coverall means a coverall type garment with head and foot coverings worn to prevent contamination of the employees regular work clothes and person.

Work Area means a specific room or physically isolated portion of a room in which ACM is required to be handled in accordance with the requirements of these regulations. These areas are designated as work areas from the time that the room, or portion of it, is being prepared in order to perform the asbestos project until the time the area has

been cleaned free of all visible residue in accordance with applicable Departmental regulations.

Worker means an individual who is certified by DOSH in a nonsupervisory capacity to clean, handle, repair, remove, encapsulate, haul, dispose of or otherwise work with ACM in activities involving more than three square feet or three linear feet of ACM.

Work Practices are an essential element of the asbestos O&M Plan and includes a set of written work practices for the custodial, maintenance, construction staff, or outside contractors performing construction services. These include procedures for using protective equipment, development of proper cleaning practices, design of adequate maintenance practices, establishment of renovation and remodeling practices, and planning for fiber release episodes.

3.0 EMPLOYEE TRAINING & RESPONSIBILITIES

Of the various ACMs in the covered buildings at the Raymond G. Murphy VA Medical Center, certain types have a greater potential for fiber release than others. In order to avoid exaggerated control measures on materials with low potential for fiber release or insufficient control measures for materials with a high potential for fiber release, the types of asbestos work have been developed for friable and non-friable ACM. Each class applies to a different work situation in which asbestos fibers may be released into the air through operations performed on or with the asbestos material. The dividing of work into these predetermined classes assures a program in which various jobs that may involve asbestos materials are performed in a manner that maintains the necessary protective requirements of the EPA and OSHA regulations while at the same time reducing the unnecessary control measures.

3.1 OSHA JOB CLASSIFICATIONS

OSHA describes several classes of asbestos work. The standards for the construction industry classify the hazards of asbestos work activities and prescribe particular requirements for each classification:

Class I is the most potentially hazardous class of asbestos jobs and involves the removal of thermal system insulation and sprayed-on or troweled-on surfacing asbestos-containing materials or presumed asbestos-containing materials. **(Class I – TSI, Surfacing and PACM)**

Class II includes the removal of other types of asbestos-containing materials that are not thermal system insulation, such as resilient flooring and roofing materials containing asbestos. **(Class II – All Other ACMs)**

Class III focuses on repair and maintenance operations where asbestos-containing or presumed asbestos-containing materials are disturbed. **(Class III – O&M Work)**

Class IV pertains to custodial activities where employees clean up asbestos-containing waste and debris. **(Class IV – Custodial Activities)**

People who are involved in dealing with building materials that contain asbestos must be trained according to requirements found in the Asbestos Hazard Emergency Response Act (AHERA) as well as other state and federal regulations.

3.2 TRAINING COURSES

OSHA Class I & OSHA Class II Jobs
These jobs are performed by OSHA Certified Asbestos Worker, Asbestos Contractor/ Supervisor, and Certified Asbestos Consultants only.

OSHA Class III Jobs
Persons performing these jobs require OSHA O&M Training which is a 16-hour course established for O&M Supervisors and building maintenance personnel who supervise and/or perform responses to small spills or perform small-scale repair activities on building systems with ACM. This 16 hour asbestos training course includes how to identify suspect asbestos-containing materials, respond to asbestos emergencies, recognize asbestos hazards, and prevent exposure to themselves and building occupants. It also includes personnel air monitoring procedures, fit-testing protocols, setting up mini-enclosures and regulated areas, and personal decontamination procedures. It includes hands-on training in spot removal of fireproofing and acoustic ceiling materials, as well as glove-bag removal of pipe insulation. Maintenance Workers should complete the Class III OSHA O&M Training course in English or Spanish, whichever language the individual is most proficient in. Yearly retraining is required.

OSHA Class IV Jobs
Persons performing OSHA Class IV jobs require AHERA Awareness Training, a 2 hour course that meets EPA training requirements under AHERA for custodial/janitorial, construction and other maintenance personnel who work in buildings and schools and who may come into contact with ACM. This is the basic training for persons who may contact, but not disturb, asbestos containing materials, or who may clean up existing contamination. Class IV course work teaches how to safely clean up asbestos spills, repair damaged ACMs and perform contractor work in areas with friable ACMs. It also includes training in the proper use of respirators, protective clothing, HEPA vacuums and repair procedures. Yearly retraining is required.

3.3 O&M PROGRAM PARTICIPANTS

In order for an Asbestos O&M plan to be effective it must be properly implemented and followed by all involved personnel. Therefore, the VACCHS employees who encounter asbestos or whose subcontractors encounter asbestos are charged with specific responsibilities for implementing and following these procedures.

It is recommended that the Asbestos Program Manager be a person with years of experience at the VACCHS Building 1, a good understanding of its renovation history, and someone who understands asbestos and the aspects of O&M plans, asbestos

management and asbestos abatement. It is recommended that the O&M Supervisor be a person with years of experience at the VACCHS Building 1, detailed experience with building operations and an understanding of the affected systems, and someone who understands asbestos, good asbestos maintenance/monitoring practices and the aspects of asbestos removal/abatement.

The APM and the O&M Supervisor will act as sources of information for the O&M program.

It is important the all levels of employees working in the building be aware of the locations and extent of the ACM in the building.

It is the facility management's responsibility to (1) emphasize the need for recognition and identification of asbestos materials and (2) to implement proper asbestos handling procedures. In addition to this identification system for asbestos maintenance, the management shall designate individual(s) as necessary to oversee and coordinate maintenance of written records of asbestos materials, as jobs are completed and materials identified, in an orderly manner so that future reference can be made if needed.

It is facility management's responsibility to insure that continued re-inspections are conducted and documentation is maintained describing the results of the re-inspections.

The facility management shall provide staff, custodial and maintenance workers access to a copy of this O&M Plan. Facility management shall required training for custodial and maintenance workers who will encounter asbestos in their work. Facility management shall establish a documentation process and maintain paperwork as a permanent record of the Asbestos O&M Program. Paperwork shall include this O&M Plan as well as all past and future asbestos-related paperwork. Facility management shall consult with certified asbestos/industrial hygiene professionals and/or state, local and federal regulatory agency representatives to update the asbestos O&M program to maintain compliance with changing regulations. Facility management shall maintain medical exam and training records for all employees engaged in custodial and maintenance activities involving ACM.

3.3.1 Asbestos Program Manager (APM)

The Asbestos Program Manager (APM) has an overall responsibility for the asbestos O&M Program. He/she coordinates all activities related to the Asbestos O&M Program. He/she may assign work tasks such as recordkeeping and communications to other personnel as required or allowed by facility management. Ideally, the APM should complete training for OSHA Class I and Class II jobs since he/she will be in charge of all

asbestos work at the facility. The course work includes the initial 5 day Contractor/Supervisor, 3 day Building Inspector, 2 day Management Planner and the 3 day Project Designer. Yearly retraining is required to maintain accreditation and should be maintained for each course (Contractor/Supervisor, Inspector/Management Planner and Project Designer). A minimum of three days of continuing education will be required per year.

The APM will monitor and manage the ACMs in the covered buildings at the facility. The APM should thoroughly understand the scope of work of all remodeling or repair work involving ACM. He/she will determine the procedures required for the work. Once the scope of work has been determined, the specific procedures outlined in the O&M Plan must be used. This O&M Plan outlines the different types/classes of jobs and the associated procedures that are required for each. The APM will need to make occasional judgment calls on modifying work procedures to fit special cases. The general rule is to minimize or eliminate the possibility of anyone's exposure to asbestos fibers, but to protect them for the possibility of exposure should one occur.

The APM is responsible for the implementation of the O&M Plan. Duties include the following:

Establish work practices and procedures,
Ensure employees are properly trained,
Ensure proper equipment and material are available to carry out job assignments,
Approve work orders for all abatement work,
Fills out required reports,
Prepare all necessary paper work for the permanent asbestos file,
Ensure necessary decontamination facilities are used,
Ensure appropriate sampling is performed,
Determine appropriate response actions,
Control and monitor all building activities involving ACM, and
Periodically review the O&M Plan for effectiveness (at least annually) and make changes as necessary.

The APM may delegate some duties to the O&M Supervisor, but he/she retains responsibility for administration of the program.

After defining the scope of work for remodeling, the APM must determine whether minor or major abatement practices need to be employed. Larger renovation/construction projects must be performed under the guidelines provided for major asbestos removal. Major asbestos removal projects will require an abatement specification. For major removal projects the APM should get several competitive

asbestos abatement contractor bids. He/she should select the asbestos abatement contractor that appears to be best suited for the project.

3.3.2 O&M Supervisor

This person is responsible for supervising and assisting the custodial and maintenance workers while they are performing routine maintenance work that may or may not involve ACMs. The O&M Supervisor(s) should complete the Class III OSHA O&M 16 hour course.

Additional training could include a two-day, or equivalent, course in confined space entry; and Cardiopulmonary resuscitation (CPR) and first aid training, with annual re-training.

The O&M Supervisor in charge of a maintenance project/job shall insure asbestos materials are recognized and identified.

In order to ensure the safety and health of maintenance employees, the O&M Supervisor in charge of a maintenance project/job must understand the potential health effects of airborne asbestos fibers, the required work practices to eliminate/minimize the release of asbestos fibers, the required use (and proper fitting techniques) of personal protective equipment by all employees engaged in work involving asbestos and the practical use of common sense in controlling the release of asbestos fibers.

The O&M Supervisor is also responsible for maintaining a written record of the maintenance projects/jobs which involve asbestos and those employees which are assigned to perform those activities that involve asbestos-containing materials.

The O&M Supervisor shall also be responsible for periodic visual inspections to evaluate the structural integrity and condition of asbestos-containing materials, use of asbestos maintenance, project and other documentation forms, and maintenance of all laboratory results involving employee exposure while performing asbestos-related maintenance duties.

3.3.3 O&M Workers

Private contractor employees such as electricians, air conditioning mechanics, plumbers, steam and chilled water plant operators, etc. who will be required to handle ACM in the course of their otherwise non-ACM facility work will require training/accreditation as Asbestos Workers.

Facility O&M Workers are responsible for performing routine maintenance work that may or may not involve ACMs. These workers may disturb small amounts of ACM as part of routine maintenance activities. O&M Workers should complete the Class III OSHA O&M 16 hour course. VACCHS O&M Workers are responsible for performing O&M procedures in accordance with this O&M Plan and all other applicable rules and regulations, using the protective equipment supplied to them in accordance with their instructions and training, and reporting any activities not performed in accordance with the O&M protocol, established rules and regulations.

Prior to any O&M Worker performing a work assignment that may impact asbestos-containing materials, the O&M supervisor shall advise the O&M Worker about the presence of asbestos in his/her work area and remind him/her of the potential dangers associated with the release of asbestos fibers. When the job assignment involves materials that are not designated asbestos free, the use of asbestos-specific personal protective equipment (PPE) is required. In addition to the PPE, the work must be performed using the proper job class control measures.

Any O&M Worker who shall become engaged in asbestos work must complete a formal training program that meets regulatory guidelines for maintenance work, must undergo respirator training and fit testing, and must have a medical examination within 30 days of starting work.

Medical surveillance is the part of an O&M Plan which requires that all O&M Workers (who work with asbestos) receive a specialized physical examination to assure that they are physically fit to wear a respirator. OSHA regulations require an employer to make available to each of his employees a comprehensive medical examination within 30 days of his first employment in any occupation where he/she might be exposed to asbestos, and thereafter, at least annually. The employer shall also make available the same type examination within 30 days before or after the termination of employment, unless the employee has been examined within the previous one year period.

3.3.4 Custodians and Housekeeping Staff

Facility custodians are responsible for performing facility cleaning work on materials that may or may not contain asbestos. Facility custodians should attend the Class IV OSHA - AHERA Awareness 2 hour training course. This is the basic training for persons who may contact, but not disturb, asbestos containing materials, or who may clean up existing contamination.

4.0 O&M PLAN COMPONENTS

4.1 PROCEDURES

All facility employees and contractors whose duties involve work with and around ACM in the covered buildings must be alert to its existence and aware of its hazards. With this information, they will know what work can or cannot be done with regard to asbestos and protection against its exposure. All work schedules must be reviewed by the APM. All work done in the proximity of asbestos-containing materials will be done after hours when the fan units have shut off for the evening, whenever possible.

4.2 SCHEDULED O&M INSPECTIONS

The covered buildings should be routinely inspected for changes to the condition of identified ACM year round. ACMs shall be visually checked by trained personnel at least once every 3 months to identify and correct conditions that may exist in the buildings due to water damaged areas and other deterioration that may cause fiber release. The results of this inspection shall be recorded on the reinspection form in Appendix A. Maintenance personnel and building occupants shall be instructed to report promptly to the management the presence of any damaged ACMs. An appropriate assessment and repairs should be made as soon as possible.

A full scale re-inspection should be performed on an annual basis. Ambient air sampling for asbestos fibers, if adopted by the facility, should be included at the time of the annual inspection. Air sampling can provide informative data regarding the presence of asbestos fibers in the covered buildings.

4.3 O&M WORK RECORDS/INSPECTION FORMS

All changes to the covered buildings must be recorded. Contractors and maintenance personnel must register their names, dates and times and the purpose of the project with the APM. Contractor work forms are provided in Appendix A

One purpose of the Asbestos O&M Program is to prevent the disturbance of ACM except under controlled conditions. By implementing a system of in-house project notification and maintaining a project registry, a central control location will be established for dispersing important information, maintaining control over projects that will/could impact asbestos.

Thorough record keeping practices must be maintained in order to control potential asbestos related problems.

The following forms can be used to document O&M activities in the covered buildings. The APM is encouraged to modify these provided forms and/or create new forms that will be useful for ACM management as necessary to meet the specific needs of the building and staff.

Form OM-10 DESIGNATION OF CONTROLLED AREAS AND MATERIALS
This form can be used to identify areas that contain asbestos and should not be entered or used by non-trained personnel until further notice.

Form OM-20 NOTIFICATION OF AWARENESS TRAINING SESSION
This form can be used to notify personnel of planned asbestos awareness training sessions.

Form OM-30 AWARENESS TRAINING SESSION RECORD
This form can be used to document which personnel have attended asbestos awareness training sessions.

Form OM-40 CONSTRUCTION / MAINTENANCE EMPLOYEE NOTIFICATION
This form can be used to notify construction and maintenance personnel of the presence of ACM in the building and document that those personnel have received O&M related instruction/training.

Form OM-50 ASBESTOS-CONTAINING MATERIALS LOCATION NOTIFICATION
This is a multiple page form that can be used to inform building personnel that asbestos is present in the building and, in general, what ACMs are present and where they are located. This form will identify that ACM is a controlled material which should be handled using specialized work practices conducted by trained personnel, and that trained personnel will perform periodic surveillance of ACMs and will maintaining them in good condition.

Form OM-60 ASBESTOS WORK PERMIT REQUEST FORM
This form can be used by the O&M personnel when a project needs to be performed that may impact ACMs.

Form OM-70 MAINTENANCE CONTRACTOR NOTIFICATION
This form can be used to notify maintenance contractors of the presence of ACMs in the building and to document that these employees have been trained regarding the use of the ASBESTOS WORK PERMIT REQUEST FORM before performing maintenance work.

Form OM-80 EMPLOYEE NOTIFICATION OF AN ASBESTOS ABATEMENT PROJECT
This form can be used to notify and document that notification has been made to building personnel of planned asbestos abatement projects.

Form OM-90 RESPIRATORY PROTECTION TRAINING RECORD
This form can be used to document that specific O&M personnel have received training regarding the respiratory protection program.

Form OM-100 QUALITATIVE FIT TEST RECORD
This form can be used to document that specific O&M personnel have received a qualitative respirator fit test pursuant to the respiratory protection program.

Form OM-110 ASBESTOS OPERATIONS AND MAINTENANCE PROJECT
This form can be used to document specific information regarding planned O&M projects.

Form OM-120 O&M EMERGENCY EPISODE REPORT
This form can be used to document emergency episodes involving damage to ACMs and the potential release of asbestos fibers. Information entered on the form will include a description of the response measures taken to cleanup the spill and decontamination/clearance results.

Form OM-130 O&M QUARTERLY INSPECTION FORM
This form can be used to document the performance and results of quarterly building inspections.

4.3.1 Quarterly Inspections

Quarterly inspections should be performed and records maintained on all exposed ACMs. Exposed ACM is defined as any material visible to the inspector without his having to remove or disassemble barriers. Quarterly inspection forms consist of the following factors taken from the survey and exposure algorithm.

Factor (1), material condition, should be rated on the amount of deterioration with a scale rating from 0, no damage, to 5, widespread damage.

Factor (2), water damage, should also be rated on the amount of deterioration with a scale rating from 0, no damage, to 5, widespread damage.

Factor (3), exposed surface area, should be rated on a scale of 0, for no exposure, to 4 for 100% exposure.

Factor (4), accessibility of the material, should be between 1 for low, 4 for high. Inaccessibility is rated 0.

Factor (5), activity movement, should be rated on a scale of 0, for none, to 2 for high activity.

Factor (6), air plenum, direct air stream, should be rated on a scale of 0 to 6, high air flow will be factored as a 6, no direct air flow is rated as 0.

These inspection forms should have the last rating previously recorded enclosed so that there can be a progressive analysis. These forms, when complete shall then be used to update the exposure index. The exposure index is a rating used to quantify condition and potential disruption. The sum of factors 1 through 6 is multiplied by the index multiplier (Factors 7 x 8) as determined by the original survey. The resulting number is your exposure index. Interpretation of the exposure index may be seen in the comments section of the attached survey and exposure algorithm sheets.

4.3.1 Inspection Tips

In looking for new damage, notice any white residue on the tops of floors and on the tops of furniture. This will be an indication of damage. Look for exposed pipe insulation, any place where the wrap has been torn. Look at ceiling material to see if chunks of it have come loose.

Also note any situation where furniture may have been moved up to any asbestos-containing material in such a way as to possibly damage or loosen the material.

If any damage whatsoever is found, it must be reported on the inspection form. Also note the condition of HVAC filters in fan rooms. It is essential that these be changed on a regular schedule.

4.4 DESIGN AND USE OF PROJECT LOGBOOKS

An O&M logbook should be established for all work involving ACMs in the building, regardless of whether the work is performed by facility staff or by outside private contractors. The logbook serves as a record for maintaining all the records associated with each project. At a minimum the logbook should include copies of the employee's names, medical examination records, respirator fit tests, copies of any accident and injury reports, air sampling results, notes concerning any deviation from the standard

working procedures, daily sign-in and -out sheets for that project, waste disposal records, and any other pertinent documents, permits, notifications, photographs, or records.

The project logbook serves many important functions. It provides a ready reference for each project which may be produced at any time during the project or long after its completion. The logbook can be an important tool for planning and for estimation costs. When planning a project of a similar nature, it can aid in estimating how long a project will take to complete, how many people will be necessary, and how to attack specific problems.

A project logbook may help protect the facility in future litigation regarding particular buildings/projects. It can demonstrate that the workers/contractors performing the work attempted to do the best job possible using state-of-the-art techniques. The sign-in and sign-out sheets are a record of who entered the work area, for what purpose, and for how long. This information coupled with the air monitoring data can be used to estimate how much asbestos the person was exposed to and for how long. Copies of the daily inspection reports will also reveal if employees were wearing their respirators and that they were adequate to protect the workers at the levels of fibers documented by air sampling. This information will be valuable if needed for litigation in the future. It is important to note here that all the records must be kept, not just some of them. A permanently bound log book will be used to verify daily work schedules, lab results, and problem solutions.

The logbook should be well organized. There are two common methods of organization. The day-by-day method involves notations made for each work day. Entries must be made for days on which no work is done as well. Indicate that no work was done on this day and how the integrity of the jobsite was maintained.

Another common method of organizing a logbook is by activity. Using the by activity method, a loose leaf notebook is divided into each activity and all documentation, notes, and receipts concerning that activity are maintained in the appropriate section. The following outline is one suggestion for outlining a logbook. It should be noted that this is just one outline, depending on the requirements of each project some sections may not apply while additional ones may be necessary.

Pre-work Papers-EPA and State Notification forms, necessary state licenses, county or city permits (contractor's license, disposal permits, etc.). Records regarding the bonding company, size of bond, etc.

Contract Specifications - In this section would be a copy of the contract specifications including any attached drawings.

Personnel - Personnel including employment application, W-4 withholding forms, medical records, and any other records relating to each employee. Some companies also have each employee sign certificates stating that have read and understand the Operation and Maintenance Plan Training Information, been trained in asbestos removal techniques, trained and fit-tested for respirators, etc.

Sign-in Sheets - A separate section containing the daily sign-in sheets indication when each employee went in and out of the work area, their affiliation, and purpose of entering the work area. Included in this section would be a list of all authorized personnel permitted to enter the contaminated area. Also in this section is a record of each employee's work hours for payroll purposes.

Subcontractors - This section would be a record of all subcontractors' activities including copies of the contract, names, dates, etc.

Air Monitoring - All air sampling results for the project should be included in this section. Area air sampling and personal sampling results should be presented. Also included in this section must be a copy of the sampling and information concerning the work.

Waste Disposal - Records of waste disposal, including trip tickets, should be kept in this section.

Daily Inspection Reports - Copies of the daily inspection reports should be maintained. Reports should also indicate who performed the inspection, date and time of inspection. It is extremely important to include comments on unusual aspects of project and to address any problems that arose and how they were handled.

Other Sections - Other sections may be added as necessary to include injury/illness reports, receipts for rental equipment or lodging, reports from outside inspection or government agencies, newspaper clipping, etc.

The responsibility of maintaining the logbook is to be assigned to the APM. The logbook is prepared at the request of general counsel for the purpose of rendering legal advice and is subject to the attorney work product privilege. All logbooks are to be kept secure and confidential.

4.5 OSHA RECORDS AND REQUIREMENTS

OSHA requires that a poster be permanently posted on the job site notifying workers of their rights under the act. This poster, commonly known as the "Job Safety and Health Poster," is available from OSHA offices.

The APM should be familiar and have a working knowledge of OSHA requirements. All training should be based on the material outlined in this text, being sure to cover unduplicated material from GISO 5208. The most stringent guidelines of either source must be followed. When an employer has 10 or more employees, he is required to maintain a record of injuries and illnesses that occur. Part of this Worker's Compensation insurance carriers. The other requirement is maintenance of the "Log and Summary of Occupational Illnesses and Injuries -- OSHA Log 200". These forms and a booklet titled, "What Every Employer Needs to Know About OSHA Recordkeeping," are available from OSHA and provide information on injury and illness record keeping requirements.

4.6 MEDICAL RECORDS

All individuals involved in any asbestos work shall have a complete medical examination on file. The pulmonary function test is important to determine the person's ability to function with a respirator. Medical examinations are required at the beginning of employment or implementation of the O&M Program, on an annual basis, and at the end of employment. The medical exam is performed to evaluate employee's current health status and their ability to perform the necessary work using a respirator and to identify those employees with pre-existing medical conditions that could impact their ability to perform asbestos-related O&M work. Workers identified with conditions where it is not medically safe to wear a respirator should participate in any work involving asbestos.

4.7 SAMPLING RECORDS

All sampling records will be compiled by the APM or, if designated, by the O&M Supervisor.

4.7.1 Bulk Sampling

The APM will keep all sample results on file. This file should be updated as new information is obtained. Where bulk samples have not been previously collected, the APM shall ensure that samples will be collected of materials that will be disturbed during any renovation, demolition or maintenance activity, or will assume that the impacted materials are ACM. Bulk samples will be collected by those persons holding a current EPA accreditation. A copy of laboratory reports for bulk sample related to O&M activities will be retained by the APM.

4.7.2 Air Sampling

Air sampling must be performed during all Class I, II and III work activities. Class IV work does specifically not require air sampling. Two types of air samples are typically collected in regards to asbestos. The first type is "area" air samples from stationary locations using high volume air pumps. The second type is "personnel" air samples collected from worker's breathing zones for determination of compliance with the Permissible Exposure Limits. Air samples should be collected by the O&M Supervisor, the APM or other trained/qualified designee. Analysis of the collected air samples should be performed by a person trained and accredited in the NIOSH 582 coursework and analyzed in accordance with Phase Contrast Microscopy (PCM) by the NIOSH 7400 method in order to calculate the ambient fiber count or the employees Time Weighted Average (TWA). PCM can be performed in the field by trained persons using a specialized field light microscope or by a stationary laboratory.

All air sampling performed on O&M activities should be consistent the guidelines established in this O&M Plan and within regulatory guidance documents.

The following levels (based on phase contrast microscopy-PCM- analysis) will be used for setting corrective actions for ambient air sampling.

0.01 f/cc (or less) – acceptable ambient airborne fiber count levels and recommended air clearance level for O&M and asbestos abatement projects

Project-related "area" air sampling will include, at a minimum:
(1) one "area" air sample inside the work area; (2) one "area" air sample from the loadout area, if applicable; (3) one "area" air sample directly outside and adjacent to the work area; (4) one "area" air sample per shift from the exhaust of the negative air machine, if applicable; (5) one "area" air sample immediately outside the clean room of the decontamination system, if applicable.

Clearance "area" air sampling will include, at a minimum:
(1) one clearance sample for every 1,500 square feet, or one clearance sample for every 15,000 cubic feet, whichever is greater, and (2) a minimum of one sample per room or discrete area.

Routine "area" air sampling for glovebag activities should include, at a minimum,
(1) one sample inside general work area, and (2) at least one clearance sample. Clearance sample(s) will not be required if the personal and inside work area sample do not exceed a measured value of 0.01 fibers/cc with a detection limit below 0.01 fibers/cc.

Requirements for clearance sample for all Class III O&M projects are as follows. (1) Clearance sample will be performed in accordance with current regulatory requirements; (2) clearance sample(s) will be collected at a flow rate of no more than 10 liters per minute for 25-millimeter cassettes and will have a total volume of at least 1,200 liters of air; and (3) an area will be considered clear if the upper confidence limit of the airborne fiber concentration is less than 0.01 fibers/cc or less than background levels, as determined prior to abatement, whichever is greater.

All persons performing air monitoring for O&M projects will have completed training for the NIOSH Course Number 582 entitled *Sampling and Analysis of Airborne Asbestos Dust*, the *Asbestos Air Monitoring Course*.

Personnel performing air monitoring for O&M projects will not enter any demarcated work area without current EPA accreditation. All personal air samples will be reported with the type of respirator being used by the employees. Air sampling should include the submission of “blanks” (unused cassettes) with each day's samples. Blanks are usually analyzed if the collected air samples appear overly contaminated and can be a way to determine if the cassettes were contaminated before the air samples were collected.

In addition to project specific air monitoring, this O&M Plan should include performance of periodic “ambient” air sampling inside the building to assess the overall indoor air quality in reference to airborne (asbestos and non-asbestos) fibers. Ambient air monitoring is performed at stationary locations. In comparison with personnel air monitoring, higher volumes of air are collected at higher flow rates for ambient samples and a/c (plug-in) pumps are usually used. The results of periodic ambient air monitoring can be used to document the air quality in the building with regards to airborne fibers. When ambient air monitoring results are below 0.01 f/cc no corrective action is needed. When results of periodic air monitoring exceed 0.01 f/cc procedures will be initiated to (1) determine the fiber release origin and to (2) perform control procedures to stop the release.

Copies of the laboratory/analysis reports for all air samples taken as a part of an O&M project will be sent to the APM and maintained in the logbook.

4.7.3 Personal Air Monitoring

All personnel performing O&M activities will be monitored during performance of the O&M work using personal air sampling techniques. Sampling also should be performed during work area preparation activities if damaged ACM is present in the area.

Personal air monitoring is a method used to determine an employee's exposure to airborne asbestos fibers. Personnel air sampling involves setting a battery operated pump, suction hose and plastic cassette with a special filter on an employee within his/her breathing zone while he/she performs work. A special vacuum pump is used to pull air through the hose and filter in order to process a certain volume of air through the filter. Fibers suspended in the air near the breathing zone of the worker get pulled in and trapped in the filter. The filter or “sample” is viewed or “analyzed” with a specialized light microscope and fibers on the filter are counted using special procedures/methods established by the EPA. The volume of air that passes through the filter is calculated by measuring the flow rate of the pump (using a calibration device) and multiplying that by the number of minutes that the pump pulled air through the filter.

OSHA requires that employers determine their employee's exposure to asbestos, regardless of the type of respirator worn by the employee. Personal air monitoring results are used to help verify which type of respirator (half-face negative pressure, full-face powered air purifying, supplied air, etc.) provides adequate protection on a particular project and, therefore, should be worn by the employee. The higher the concentration of asbestos fibers, the greater the degree of protection needed.

4.7.4 Asbestos Permissible Exposure Limit

A Permissible Exposure Limit (PEL) is the maximum amount or concentration of a chemical that a worker may be exposed to under OSHA regulations. PEL's can be defined in two different ways :

Ceiling values are levels which, at no time, should be exceeded. They are sometimes denoted with the letter C in OSHA PEL tables.

8-hour Time Weighted Average (TWA) is an average value of exposure over the course of an 8 hour work shift. TWA levels are usually lower than ceiling values. Thus, a worker may be exposed to a level higher than the TWA for part of the day (but still lower than the ceiling value) as long as he is exposed to levels below the TWA for the rest of the day.

The PEL for employee exposures to asbestos fibers is 0.1 f/cc over an 8 hour work shift. The Short Term Exposure Limit - STEL (like a ceiling limit) for asbestos is 1 f/cc averaged over a 30 minute period. At no time should any one employee be exposed above the STEL in any 30 minute period during the work day.

4.8 DISPOSAL RECORDS

All waste generated from O&M projects will be properly stored and inventoried. Records must be kept regarding the disposal of asbestos waste. The APM must be able to prove, through waste manifests, disposal receipts, or other written records, that the asbestos removed from the buildings has been received and accounted for at an authorized disposal facility.

Small amounts of asbestos waste may be stored until such time that a sufficient amount has accumulated to warrant disposal. At no time should the waste accumulation exceed 90 days. Once one drop of waste is placed in the asbestos container the facility has 90 day to have that material transported for disposal.

A licensed asbestos transporter shall be contracted to transport ACM off site for disposal. The APM shall ensure that the disposal contractor is provided with the bulk sample reports and material safety data sheets (MSDS) for all chemicals, if any, used in the removal of the asbestos, if such material may be present along with the ACM waste.

Waste receipts provided for disposal must be forwarded to the APM so that a report may be sent to the state authorities within 30 days.

5.0 SPECIALIZED TOOLS & EQUIPMENT

Working with and around asbestos requires the use of specialized equipment and supplies. These include but are not limited to:

HEPA filtered vacuums
HEPA filtered negative pressure filtration machines (usually used by contractors)
Amended water/surfactant
6 mil (bag thickness) properly labeled polyethylene (plastic) disposable bags
6 mil polyethylene sheeting
Cutting & scraping tools
Disposable towels/rags
Duct tape
Retractable knifes/box cutters
Spray Adhesive
Spray bottles/misters – airless sprayers
Encapsulants
Protective disposable one-piece Tyvek™-style suits/coveralls
Special NIOSH-approved respirators
Gloves, boots, hard hats
Disposable mops, scrubbers, wire brushes

Proper use of the above protective equipment should be covered by the training sessions that each employee will attend. Other equipment found to aid in clean-up may be used with the provision that all tools be used properly, safely, and are cleaned upon completion of any work.

Equipment/supplies required for major abatement activities are provided by the project abatement contractor and are not described specifically herein.

5.1 HEPA VACUUMS

HEPA vacuums will be used on all O&M work. Only personnel trained on and familiar with HEPA vacuums will use HEPA equipment. Because HEPA vacuums trap asbesos fibers inside their canisters and filters, it is very important to store the vacuum in a secured isolated area and with specialized procedures. HEPA vacuums will be stored with duct tape placed over the tank inlet to prevent fiber leakage during non-use times. Vacuum hoses will be duct taped at each end in the same manner. Attachments will be kept clean and stored in a properly labeled and sealed 6-mil plastic bag between use. HEPA vacuums will be stored in a secured limited access storage room between uses.

They should be wet wiped prior to removal from a work area to ensure that no asbestos fibers remain on the outside of the unit.

Manufacturer instructions will be followed for all maintenance performed on HEPA vacuums. HEPA filters should be changed periodically, depending on the volume of usage. Records will be maintained for all services performed and filter replacement.

HEPA vacuums will be opened and cleaned out as often as necessary utilizing the following methods. Workers will wear protective clothing and, as a minimum, fullface air purifying respirators. Bags and filters will be removed in an established work area or other containment as authorized by the APM. After being misted thoroughly with water, the vacuum bags and filters will be carefully removed from the unit, and replaced with new bags/filters. The vacuum will be labeled with appropriate asbestos warning labels.

5.2 NEGATIVE PRESSURE FILTRATION DEVICES

These devices will typically be used on abatement jobs that are conducted by an abatement contractor. These devices have several different names; such as negative air machine, NPFD, NFD, air hog, etc. On asbestos abatement projects these units are equipped with HEPA filters and, when installed properly, they create negative pressure in an enclosed area by moving air from the outside of the contained area to the inside. The units “suck” air through the HEPA filter, trapping asbestos and other fibers. The air that is processed through the units is usually exhausted to the outside of the building whenever possible. The created negative pressure acts to pull air inside the contained area, and prevents fibers from escaping to the outside.

Only personnel trained and familiar with negative pressure filtration devices will use and maintain this equipment. Machines will be stored with the intake and exhaust ducts plugged and taped to prevent any fiber release. An appropriate warning label will be placed on the equipment. Decontamination of the exterior or the replacement of filters will only be performed in a designated work area. Transportation of equipment to a designated area will be performed after sealing the unit with 6-mil plastic. Decontamination will be done by HEPA vacuuming the exterior surface followed by wet wiping with amended water. Water and rags will be disposed of as contaminated waste. Filters will be removed with great care after misting them with amended water, and will be disposed of as contaminated waste. HEPA filters should be changed periodically depending on the volume of usage. Manufacturer instructions will be followed for all maintenance performed on negative pressure filtration devices. Records will be maintained for all service performed and filter replacements.

5.3 AMENDED WATER

All O&M activities will be performed utilizing wet methods, which involves treating the material with "amended" water solution. Amended water contains regular tap water plus a solution that is referred to as a wetting agent, like soap. This wetting agent may be 50% polyoxyethylene ether and 50% polyethylene ether or appropriate substitute mixed in a concentration of 1 fluid ounce to 5 gallons of water or as specified by its manufacturer. This will be applied using an airless sprayer that will deliver 1 gallon per minute at no greater than 400 psi pressure. If an airless sprayer is not available for smaller O&M projects, the use of hand use spray bottles will be acceptable.

5.4 ENCAPSULANTS

Encapsulants are usually applied to a material, the substrate and the general removal area after ACM has been removed. Once ACM has been removed, the area has been thoroughly cleaned and a visual inspection shows no visible dust remaining, an encapsulant can be applied. It's purpose, in post abatement substrate treatment, is to "knock-down and lock-in" any remaining asbestos fibers AFTER the area has been thoroughly cleaned and inspected.

Encapsulants are also used as a method to control asbestos fibers from being released from a surfacing ACM (usually fireproofing or spray-applied acoustic material). These procedures should only be performed by professional asbestos abatement contractors who are properly trained and very familiar with the specific encapsulant's application procedures. Encapsulants will not be applied to any surfacing ACM (spray-applied acoustic, fireproofing, plaster, etc.) unless: (1) the asbestos surface has first been tested and approved for substrate adhesion and/or encapsulant penetration, OR (2) the encapsulant has been certified by Underwriters Laboratories to be a rated component of the fireproofing system. Encapsulants will not be applied to any surfacing ACM which has been water damaged, which are subject to water or physical damage after encapsulation, or which exhibit any signs of delamination or deterioration. Encapsulants add weight to the material applied and could cause delamination and failure of the surfacing ACM if improperly applied.

The following is a general procedure for encapsulation on ACMs other than following removal for knock-down/lock-in" purposes. Isolate and clean the work area by HEPA vacuuming and/or wet wiping to remove accumulated dust and fibers. Place 6 mil poly on the floor under the work area. Apply one coat of penetrating encapsulant per the manufacturer's recommendations. Apply tinted bridging encapsulant per the manufacturer's recommendations. If necessary, apply nylon netting around edges of pipes and fittings. Ensure that the encapsulant penetrates the netting. Apply a second

coat of encapsulant (of another color if desired) after the first has dried. Dispose of all waste and poly on floor in 6 mil labeled disposal bags upon completion of the work. Remove excess air from the bag with the HEPA vacuum, twist the bag closed, and seal with duct tape. Area barriers, where applicable, will not be removed until air samples have been analyzed and clearance is given.

All personnel must decontaminate following the encapsulation procedures.

6.0 PROJECT CLASSIFICATIONS & WORK PROCEDURES

The work that will be performed in association with the ACM can be separated into many different classifications. Federal Occupational Safety and Health Administration (OSHA) and California OSHA have enacted standards to protect workers from exposure to asbestos in the workplace. The standards for the construction and shipyard industries classify the hazards of asbestos work activities and prescribe particular requirements for each classification. As indicated in Section 3.0 of this O&M, OSHA Work Classifications are as follows:

OSHA Class I is the most potentially hazardous class of asbestos jobs and involves the removal of thermal system insulation and sprayed-on or troweled-on surfacing asbestos-containing materials or presumed asbestos-containing materials.

OSHA Class II includes the removal of other types of asbestos-containing materials that are not thermal system insulation, such as resilient flooring and roofing materials containing asbestos.

OSHA Class III focuses on repair and maintenance operations where asbestos-containing or presumed asbestos-containing materials are disturbed.

OSHA Class IV pertains to custodial activities where employees clean up asbestos-containing waste and debris.

The EPA NESHAP regulation places asbestos-containing materials into the following three categories.

NESHAPS RACM means friable asbestos material, NESHAPS Category I material that has become friable or has been subjected to pulverizing, grinding, chipping, sanding or abrading, or NESHAPS Category II non-friable ACM that has a high probability of becoming or has become crumbled, pulverized or reduced to powder by the forces expected to act upon the material during the course of renovation or demolition.

NESHAPS Category I means non-friable ACM, examples include resilient floor coverings and adhesives, asphalt roofing products, packings and gaskets, that, when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure.

NESHAPS Category II means all other non-friable ACM; examples include drywall and asbestos cement products.

6.1 OSHA CLASS I WORK – REMOVAL OF FRIABLE TSI & SURFACING MATERIALS

Class I work is the most potentially hazardous class of asbestos jobs and involves the removal of thermal system insulation and sprayed-on or troweled-on surfacing asbestos-containing materials or presumed asbestos-containing materials, regardless of the purpose of the work. These materials are also known as NESHAPS regulated asbestos containing materials (RACM) or friable ACM.

All Class I work is considered major asbestos abatement and will be performed by a licensed asbestos abatement contractor. This work requires specialized procedures and equipment that should only used by trained and certified abatement contractors. The APM shall ensure that all work performed by private asbestos abatement contractors involving RACM or friable ACMs is compliance with the appropriate work procedures. In addition, a CAC should be hired to develop project specifications, to assist with contract administration and to provide contractor oversight during the abatement project.

The specific procedures associated with Class I work are very detailed and will not be covered in this O&M Plan because the work will be not be performed by O&M employees.

6.2 OSHA CLASS II WORK – REMOVAL OF CATEGORY I & II NONFRIABLES

Class II work includes the removal of other types of asbestos-containing materials that are non-friable regardless of the purpose of the work. Class II work applies to NESHAPS Category I (Regulated Asbestos Containing Materials – RACM) and Category II non-friable ACMs. Class II work involving the removal of over 100 square feet of ACM should be performed by an asbestos abatement contractor. Removal of less than 100 square feet of material can be undertaken by facility O&M Workers. For further information see Section 6.3 – OSHA Class III Work - Repair & Maintenance Work.

NESHAPS Category I ACMs are those that are intact, and cannot be pulverized, when dry, by hand pressure. Example include Vinyl Asbestos floor Tiles (VAT), Vinyl Floor Covering (VFC), VAT/VFC adhesive and Transite/asbestos cement products which are presently intact. NESHAPS Category II non-friable materials are those that are presently intact and during the course of renovation would or have the potential to become friable. Examples include drywall/joint compound and wall plaster.

6.3 OSHA CLASS III WORK – REPAIR & MAINTENANCE

All of the ACM removal work that will be performed by facility staff will fall under Class III and Class IV work.

Class III work includes repair and maintenance operations where asbestos-containing or presumed asbestos-containing materials are disturbed to repair another system component. These ACMs include both RACM (friable TSI and surfacing materials and non-friable ACM. The quantity limit for repair and maintenance work is the amount that will fit into one 60” by 60” glove bag, which is estimated at approximately 100 square feet. Work involving removal/ disturbance of ACM that exceeds 100 square feet must be performed by a licensed asbestos abatement contractor.

To perform Class III work O&M Workers must complete an initial 16 hour operations and maintenance training for maintenance workers involved in general maintenance and asbestos material repair tasks as described in Section 3.0.

OSHA Class III works is typically expected to be of small scale and short duration.

Class III asbestos work shall be conducted using engineering and work practice controls which minimize the exposure to employees performing the asbestos work and to bystander employees. The work shall be performed using wet methods. To the extent feasible, the work shall be performed using negative air machines. Where the disturbance involves drilling, cutting, abrading, sanding, chipping, breaking, or sawing of thermal system insulation or surfacing material, impermeable dropcloths shall be used, and the work shall be performed using mini-enclosures or glove bag systems or another isolation method.

If a "negative exposure assessment" can not be provided documenting low airborne fiber exposures on similar work, or where air monitoring results show that the PEL has been exceeded, the work areas shall be contained using impermeable dropcloths and plastic barriers or their equivalent, or shall isolate the work area using a formal control system. This work may need to be performed by a licensed asbestos abatement contractor.

O&M Workers performing Class III jobs, which involve the disturbance of thermal system insulation or surfacing material, or where the employer does not produce a "negative exposure assessment" or where monitoring results show a PEL has been exceeded, shall wear respirators which are selected, used and fitted in accordance with OSHA regulations.

Provisions must be made to ensure compliance with all applicable codes and regulations, such as Fire, Building, and OSHA regulations.

Class III work can be subdivided into work involving (a) friable ACM and (b) non-friable ACM. Different procedures should be used when removing these different types of ACM.

6.3.1 FRIABLE ACM REMOVAL

If an ACM is, when dry, capable of being crumbled, pulverized or reduced to a powder by hand pressure, it is considered friable ACM and must be treated as potentially very hazardous.

The following steps shall be taken for any work that may involve disturbing or removing friable ACM.

1. All personnel who are likely to disturb friable ACM or who may be exposed above the permissible exposure limits (PELs) must be properly trained and protected.

2. Restrict entry to the area to only those needed to perform the work.

3. Post signs to communicate the hazard and to prevent entry by unauthorized personnel.

4. Shut off or temporarily modify the air handling system, and restrict other sources of air movement in the work area.

5. Isolate the area where the ACM is located and will be removed. Place barrier tape across the doorways and at least 20 feet around the area where the ACM is located. Non-movable items will be sealed with 6-mil plastic and sealed to the floor with duct tape to prevent contamination. Contain the areas with polyethylene tape and install critical barriers as necessary. Install a 3-stage decontamination unit off the containment area that will be used by all O&M workers to enter and exit the area.

6. Use work practices (e.g., glove bag procedures, HEPA vacuum, wet methods, mini-enclosures, as described herein) which are designed to prevent the spread of any fibers released by the work being performed.

7. Plan to containerize the removed materials using an approved 6 mil plastic bag or an approved glove bag. The "Glovebag" method provides a safe means for removal of small amounts of ACM on pipes and in small surface areas. Section 6.3.2 sets forth specific procedures that should be followed when the glovebag method is used to remove ACM.

8. Don personal protective clothing, such as the "Tyvek" suits, and gloves.

9. Start air sampling for the required personal exposure monitoring.

10. Place 6-mil plastic sheeting under the areas or the glove bag set-up.

11. Ensure that all ventilation units that service the area where the ACM is located are shut off and tagged out.

12. Don the respirator and perform a "negative" and "positive" pressure checks. If you are unable to obtain a successful pressure test on the respirator, see your supervisor. DO NOT PROCEED WITH ACM WORK WITHOUT PROPER RESPIRATOR FIT.

13. Move to the area where the ACM is to be removed. Either install a glove bag using the Glove Bag procedures or proceed with material removal.

14. Wet the ACM completely prior to removal and keep the ACM wet during the removal process. Use amended water in an airless spray pump. A hand spray bottle may also be used. Use the HEPA vacuum to continually remove small debris and settled dust.

15. All visible ACM must be removed from the areas using appropriate tools that could include scrapers, hard brushes, etc. Use amended water to wet wipe the area where asbestos was removed. Special attention must be given to exposed ends of pipe lagging. Use spray encapsulant to seal the areas after cleaning has been performed and all visible debris has been removed from the component.

16. Place asbestos material debris inside a 6-mil bag. Wet wipe the surrounding area with disposable rags and place rags and any other contaminated materials (including tools that can not be effective cleaned) into the 6-mil bag.

17. Floors and horizontal surfaces in areas where ACMs are removed shall be wet mopped/ wiped and cleaned with a HEPA vacuum. Discard mop heads and wipe cloths as asbestos waste in the 6-mil bag. Dry sweeping of floors is prohibited in areas containing asbestos to minimize re-entrainment of asbestos fibers in the air.

18. Wet the inside of the bag with amended water and place the vacuum nozzle into the bag to cause the bag to collapse. Seal the collapsed bag with a gooseneck style seal. Place the bag into another 6-mil asbestos waste bag and seal tightly. This bag must be marked as an ASBESTOS DISPOSAL BAG with the proper Danger and warning labels:
DANGER Contains Asbestos Fibers
Avoid Creating Dust Cancer and Lung Disease Hazard.

19. The exposed section of pipe or other remaining ACM should now be closed and sealed with a non-asbestos material.

20. If the remaining pipe/material contains ACM, the pipe must be labeled "DANGER ASBESTOS MATERIAL."

21. Employees will always decontaminate themselves by HEPA vacuuming and wet wiping every time they leave the work area. The O&M Supervisor will instruct each employee at the onset of a project as to which decontamination methods will be utilized. At a minimum, HEPA vacuuming of clothing and wet wiping of skin surfaces, respirators, shoes, hard hats will be employed.

22. Any work involving vinyl asbestos floor tile may also involve the removal of asbestos-contaminated glue or mastic, which was originally used as an adhesive on the floor tiles. The floor tile materials can usually be popped up using a device specifically designed to dislodge floor tiles. The mastic or glue left behind can sometimes be much harder to remove. Different organic solvents are available from vendors to remove the mastic. The solvent must be allowed proper contact time to soak into the glue and help dissolve the material.

23. Perform clearance monitoring at the completion of asbestos work as deemed necessary by the APM.

6.3.2 GLOVEBAG REMOVAL

A glovebag is a plastic bag with special arm holes with gloved ends that allow one person (sometimes two people) to insert their hands and perform asbestos removal work while remaining isolated from the ACM. Glovebags are usually used for thermal system insulation removal.

A glovebag may not be used for more than one single application. Electrical equipment below the level of the glovebag or within arm's reach of glovebag must be deactivated. All electrical equipment used by the workers must be provided with GFI protection. A minimum of two people will be required to perform all glovebag removal projects. Personnel involved in glovebag abatement will be required to: (1) wear appropriate personal protective equipment (e.g., proper respiratory protection and full-body protection) in accordance with applicable regulations and (2) fully utilize a decontamination unit which is located adjacent to the work area. This decontamination unit must meet the requirements outlined in this manual.

To prevent contamination of the building environment, the work area where glovebagging is to be performed must be isolated from the rest of the building environment.

Four classifications and procedures for glovebagging are as follows:

Unoccupied Areas
Areas such as equipment rooms, attics, pipe chases, etc., will require critical barriers over doorways, windows, tunnel accesses, etc., to isolate the area from the rest of the building. Critical barriers will be constructed by a single layer of 6-mil poly. Where critical barriers are not feasible, two layers of 6-mil poly will be laid down on the floor, barrier tape will be put up to identify the work area, and the glovebag will be carefully smoke tested and maintained under negative pressure for the duration of the job.

Occupied Areas
Areas such as offices, public bathrooms, etc., can present special problems. The functional area involved will be evacuated of the general public. Critical barriers will be installed as appropriate. Movable items will be cleaned with a HEPA-filtered vacuum and wet wiped to remove any asbestos-containing dust, and moved out of the functional area. Non-movable items will be sealed with 6-mil plastic and sealed to the floor with duct tape to prevent contamination. If the functional area cannot be evacuated, then a separate work area can be constructed using 6-mil plastic and the necessary support frame. When this is done, background air samples of occupied areas selected by the APM will be taken throughout the duration of the project.

Equipment Rooms Common with Return or Makeup with HVAC System
Any glovebag work to be done in an equipment room where the HVAC system's return or makeup air is common with the equipment room, the system will be shut down and critical barriers will be installed on the return air or makeup grills. If the system cannot be turned off, a wall will be constructed in such a manner as to separate the building's air flow from the equipment room air. Walls will be constructed using a single 6-mil layer of poly.

Special Cases
Certain situations such as utility tunnels provide a unique situation in which critical barriers or separate work areas are not feasible. When this situation arises two layers of 6-mil poly will be laid down on the floor, barrier tape will be put up to identify the work area, and the glovebag will be carefully smoke tested and maintained under negative pressure throughout the duration of the job.

Tools required for glovebag operations include: 2 knives (one inside and one outside the glove bag), brush, pair wire cutters, bone saw for cutting around pipe insulation, HEPA vacuum, penetrating encapsulant in a hand sprayer, bridging encapsulant prepared and placed in baggies when edges of ACM pipe material will remain, smoke tubes and aspirator bulbs, rags or paper towels, duct tape, several glovebags in case in the first one is damaged, 1 hand sprayer or spray bottle with amended water, and 6 mil plastic film.

The integrity of the pipe where the work is to be performed will be checked to determine if loose pipe lagging several feet or even yards away from the work could be jarred loose by the activity. Loose or questionable areas will be wrapped with two layers of 6 mil poly and taped before glovebagging. No glovebagging will be done if a fiber release situation already exists until the fiber release is cleaned up. The APM is to be contacted if this is the case.
