

1. We understand we are responsible for transportation costs of the drying bed wastes to the landfill. Will Maxum also be responsible to pay for drying bed waste disposal at Webster Parish Landfill? Or will USAF pay the disposal costs?  
**Offeror is responsible for all disposal costs.**
2. To prepare the annual Special Waste Profile at Webster Parish Landfill, will Maxum be responsible for collecting the waste profile samples, and for the lab analysis costs for these samples?  
**The Government will provide the waste profile.**
3. Per page 1 of the Combined Synopsis document, pricing should be submitted for Items 0001 through 4001 (Bi-Yearly Oil/Water Separator Cleaning). Where should we include the pricing to clean and rehab the drying beds (on an as needed basis, usually yearly)? Should we include 1 yearly drying bed cleaning/rehab (of the 4 drying beds) in the line items for the bi-yearly oil/water separator cleaning? Or should we add a separate line item for drying bed cleaning/rehab?  
**Please see bid sheet under additional attachments.**
4. For the oil-water separator cleaning, we are trying to determine if we need to supply the water used with a pressure washer. Are there sources of water (to supply a pressure washer) available for us to use near the oil/water separators?  
**Offerors should plan to have their own water.**
5. It is our understanding from the scope of work that (a) uncontaminated liquids may be off loaded at the base at a location designated by base personnel; (b) contaminated water, sludge, grit chamber sand, and debris will be off-loaded at the drying beds; and (c) drying bed sand/debris will be transported to Webster Parish Landfill for disposal. Is this correct?  
**Partially incorrect. Uncontaminated liquids may be off-loaded at the drying beds. Drying bed material shall be transported to Webster parish Landfill. Contaminated liquids shall be removed from Barksdale AFB and disposed at an authorized location meeting all Federal, State, and local regulations regarding such materials.**
6. Does the scope of work include off-site disposal of any liquid or sludge wastes? Or will all liquid and sludge wastes be off-loaded on site to either the drying beds or another designated area?  
**Off-site disposal of wastes shall apply to contaminated materials. Uncontaminated wastes may be off-loaded at the drying beds.**
